THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Hello!!

Would you like to make thousands of dollars, quickly, legally, with NO CATCH? Then keep reading.....please take five minutes to read this article- it will change your life, just like it did mine. It's true! you can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested, keep reading; if you're not, I apologize for wasting your time.

Here we go, A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam".

but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!

So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what....within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and

multiplying by 10-20 times the amount that I got the first week! In my first week I made about 2- to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!!!! In the third week, I had over $10,000 dollars, and it's still growing! This is my fourth week (Nov 13) and I've made about $42,000 TOTAL, and believe it or not the money is still coming in.....

Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of this article NOW so you get the information from it, and begin making money.

The Process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST". YOU ARE NUMBER 4. get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH having a piece of paper and the $1 bill inside.

NOTE: make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this.

This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses.

1. Bruce, P.I. Box 63 4700 Keele St., North York, Ontario M3J 1P3
2. Lars Westin Bjï¿½rkvï¿½gen 3 740 12 Knutby SWEDEN
3. D. Hill, 4280 150 6 Ave. S.W., Calgery, AB, Canada T2P 3Y7
4. Mattias W sernanders vï¿½g 1 rum 535 752 61 Uppsala Sweden
5. Jeff Boldrick, RR#2 Tweed, Ontario K0K3J0

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, etc.) editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least

200 news groups (there are around 10,000 of them!!). All you need is say, at least 200. HOW TO DO THIS: If you have netscape 3.0 do EXACTLY the following:

1) click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box as it is, but CHANGE the subject box to somehting eye-catching, like, "NEED CASH $$$ READ HERE" $$$ or "FAST CASH" !!!

3) Tab once and you should be ready to type. Now, Copy and paste or retype (only once)

THIS WHOLE ARTICLE, word for word, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same.

4) When you're done typing(Copy/Paste) the whole article, click on FILE in THIS BOX,

right above send, NOT where it says netscape news on the first box. Click on SAVE AS when you're under FILE. Save your article as a Text file to our c: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTILL YOU HAVE SAVED IT. Once saved, move on to number 5 below.

5) If you still have all of our text. send or post to this newsgroup now by simply clicking send, which is right below AFILE, and right above the Cc: button.

6) Here's where you're going to post all 200. OK, click on any newsgroups then click on 'TO NEWS', again (in the top left hand corner of your netscape navigator. Leave the newsgroups box alone again, put your eye-catching title in the SUBJECT BOX, hit tab once you're in the body of the message, and then click on ATTACHMENT, which is below the subject box. You will get another box to come up. Click on ATTACH FILE, then find YOUR FILE THAT YOU HAVE SAVED; click once on this file, and then click OPEN. NOw click on OK. If you did this right, you

should see our file name in the attachments box, and it will be shaded green.

IF YOU USE I.E EXPLORER, IT'S JUST AS EASY: Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same, to copy this article. Then print this article for your records to have the names of those you will be sending $1 bills to.

Next, go to the news groups and press "POST AN ARTICLE". A window will open. Type in your headlines in the subject area and then click in the large windows below. If you want to edit the article, do so and then highlight and copy it again. Now everytime you post the article in a newsgroup all you have to reat is "CTRL" and "V" and press POST.

7) That's it! Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups. You See? Now you just have 100 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it). REMEMBER, 200 IS THE MINIMUM. The more you post, the more money you will make.

You are now in the mail-order business and will start receivng your $1 enveloopes from various people all over the world, within days! HINT: THE MORE NEWSGROUPS YOU POST TOK THE MORE MONEY YOU WILL MAKE.

You may want to rent a PO Box eventualy, because of all the mail. If you wish to stay anonymouse, you can come up with a name, such as "manager" or " investor". Just make sure all the address that you have typed in for the 4 people plus yourself are correct, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS!

Out of every 200 posting, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now, each person who just sent me $1 makes, say, only 200 posting, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. So people send you $1 now-that's $50 you have just made! Next, your new 50 agens each post 200 newsgroups with your name at number #3, or 10,000 POSTINGS (50x200 = 10,000). The average return is 500 at $1

each, so $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! and finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFROE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE ONLY MAKES 200 POSTINGS, AND IF ONLY 5 PEOPLE RESPOND!!!!!!

When your name is no longer on the list, you simply take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST. PUTTING YOUR NAME AT #5 AGAIN. And start posting again. The thing to remember is, THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY- just like you are right now!!!

So can you aford $5 to see if it really works? I think so.....

People have said, "What if the plan is played out and no one sends you the money?"

So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the internet and newsgroups every day and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day with THOUSANDS of those actually joining the internet.

Remember, PLAY FAIRLY, AND HONESTLY, and this WILL WORK, I promise you!!!! You just to be honest. Make sure yhou print this article RIGHT NOW.

Also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

REMEMBER: HONESTY IS THE BEST POLICY! You don't need to cheat the back idea is to make money!

GOOD LUCK TO ALL PLEASE PLAY FAIRLY, AND YOU WILL REAP THE HUGE REWARDS FROM THIS-TONS OF EXTRA CASH!!!!

One last note: If you try to deceive people by posting the messages with your name on the list and not sending the money to the poeple

already on the list you won't get much.

Someone I talked to knew someone who did that and he only made $150 dollars, and that's after seven or eight weeks! Then he sent the 5 $1 bills, people added his to their list, and in 4-5 weeks he had over $10,000!!!

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING US ANYTHING BUT OUR TIME, $5 AND FIVE POSTAGE STAMPS!

Yes, this is true.

Repairs are now handled by a different company, Sequel.

These drives work o.k on the ST.

Hi...I am just wondering. The NEW Gemulator Boards, will that work with just Pentium Systems or will it work on a 486DX-66 system? Also, is there any emulations for a TT or Falcon on the IBM PC? Even if it is in a card, just wondering. Thanks...

Try the German FTP sites, such as ftp.uni-kl.de or ftp.cs.tu-belrin.de

I think it was one of them I got it from, in the multitasking directory (I think!).

Are you sure? My understanding of this was that programs are always loaded into the largest available block (can't remember where I got this though)

> numbers more quickly.

This serves me right for letting that part of the article out on its own without its context. The point is not that Geneva increases CPU efficiency but that it decreases it less than MagiC did under the same circumstances. Benchtesting system software is not perfect but it is better than nothing and has to be taken in the context of many other factors. The full article should appear in a future issue of Atari Phile.
In truth, if I had wanted Geneva to win, I could have tested MagiC in its default 'Blitter off' state. Although MagiC makes no use of the Blitter, NVDI does and MagiC/NVDI is slower without the blitter than Geneva/NVDI with it. I was trying to be objective and keep the test conditions as similar as possible.
The article was originally written using MagiC 4 and Geneva 4. It was then shelved until both updates became available. I can assure you the speed gap is narrowing between the two systems, not because of anything Geneva is doing but because Magic 5 IS slower than MagiC 4.
Finally, let me reiterate. I do not have it in for MagiC. I like it a lot and if I didn't I wouldn't have spent money on the upgrade from v4 to v5. I also think Geneva is a nice system with one or two plus points over MagiC (as MagiC has over Geneva) and should get more attention than it does.

Yes programs are always loaded into the largest available block
but memory allocation (Malloc(size)) from the program will get a block
of fragmented memory thats big enough.

Thats a prejudice comment..Excluding people from participation based upon their internet service is like Nazi Germany excluding the Jewish population from the ranks of society..

Whats a real ISP? Once I leave my fine institution and a need for a new internet account I may go with AOL due to their new pricing.. I may not have to pay at all, I have a draw full of AOL trial membership..

>have a copy of STICK_DIR.DAT on the root of C: and in the ACCS folder on
>C:. The problem is, when I click on the STIK ACC I get an error message
>that it can't find the config files. HELP!!!@

Well, with all those places covered it should be finding it which begs
the question - what has stik_dir.dat got in it?

c:\accs\stik_dir.dat should contain the path to the config files
(provided the current working directory is really set to c:\accs). I
guess from the above you want it to be d:\internet so put
"D:\INTERNET\" (without quotes but with the trailing backslash) into
it with a text editor.

d:\internet\stik.rsc
d:\internet\default.cfg
d:\internet\dial.txt

are the files expected to be found there.

Source record: 133071

Hi
Well I finally got Stik to get me online,created a cache folder onto
a ram disc/c,booted up the version of Cab that I received with my Stformat
cover disc,clicked onto a site in the cab www folder, then a "resolving host"
message appeared for awhile and finally the site address appeared onto the
menu line.Does this mean that I'm on that site because I don't get any text
or graghics displayed?I checked my modem and it is still connected.
I phoned up my server and I do have a SLIP connection.He said that It
doesn't show up as CSLIP but it does appear to have some compression.
So another question that I have is:Does SLIP have some sort of compression
or is it really CSLIP even though it says SLIP?
I would really appreciate some assistance on this one....Bye for now

Normally, Peter, I'd ignore you, but your comment is about as goofy as
anything I've ever heard or seen anywhere.

Equating my distaste for clueless AOLusers (by no means the only type of
person on AOL, but certainly in the majority) with the Nazi extermination
program (which is the method they used to "exclude" Jews from society) is so
far over the top that I am hard-pressed to find a metaphor or analogy to
explain it in terms simple enough that you might understand them. I'll try
anyway:

Your analogy (my distaste for AOLusers == the Nazi genocide campaign) is
roughly equal to describing a loud fart in public as "like murdering
thousands of innocent children."

You probably still don't understand - and I have broken the unwritten UDP
rule, for which I must pay a penance - but I tried.

>I would like to know how I can access my compuserve account using my TT.
>Is it possible to use email, access newsgroups and maybe even surf the
>net? If anyone has done so, I would like to hear from you!

Yes you can access the net thru Compuserve with any PPP mode software,
I personally use Oasis 1.35 for mail (only sending), news (Compuserve's
newsserver is f*ck*ng r*bish [1], I use other ones), telnet, time, and
ftp. Unfortunately they don't have POP3 servers for the moment, so you
can't receive mail. I had to get another account at Nordnet for this,
opened only for the POP3 mailbox accessible while connected to Compuserve.
Be carefull, some provider's mailboxes are accessible only if you are
connected to them. They check the IP domain of the query... security.

To access web services, you must install another system, Mint and
Mintnet, configure all that (NOS is very hard to configure, Mintnet much
more), and run CAB. I used for that the PPPKIT 1.4 it's a very simple kit
with all you need to start. And with this kit no need for a special Minix
partition, no need for a multitasking AES, no need for much memory or disk
space... And config files for Compuserve are included!

For the Compuserve only services (mail, forums, etc...) any terminal
emulator can be used (preferably with a Compu B or B+ download mode) in
ASCII mode... or even in 8bits Latin-1 charset!

Some pointers to all that:
<URL:ftp://micros.hensa.ac.uk/micros/atari/tos/q/q041/> for Oasis 1.35.
<URL:ftp://ftp.toad.net/pub/umich/Network/Ka9q/Nos/nos_pop3.zip>
<URL:ftp://ftp.cnam.fr/pub/Atari/Telecomm/hsmoda07.lzh>
<URL:ftp://ftp.cnam.fr/pub/Atari/Mint/pppkit14.zip>
<URL:ftp://ftp.cnam.fr/pub/Atari/Internet/cab15.lzh>

When you are decided, and if you have configuration problems, feel
free to ask us here in comp.sys.atari.st.tech, we will help you.

Bye! Bruno.

I have the same problem on my system with the latest version. (I think
1.03 or something). The e-mailed the author several times explaining the
problem and he pretty much ignored my bug report saying that I was the
only one having problems. I GUESS NOT! Try the version before that one
(1.02 perhaps) , it works most of the time fairly well.

There is the option of CHKDISK3 from Atari france. But DOS has still the best software to do disk repairs with Norton Utilities. The undelete is the same like undelete on Atari, but Norton diskedit is the best to edit disks on FAT and directory level, but repairing disks this way is not easy, good knowledge of all the diskstructures is needed.

With a copy program like FCOPY you can make copies of the disk including the deleted files by enabling the option 'Get All Sectors'.

> Thanks in advance for any help you can offer me. As you can see I
> am rather unfamiliar with the Atari ST (but am desparate to recover

If you do not succeed please mail me to discuss other options.

> F030?

I don't know which chip generates but the VIDEL chip (U34) has a VSYNC signal
going from pin 6 to pin 34 of the COMBEL chip (U56) there the signal is called
VER_INT, so I guess this signal generates the vbl interrupt.
Other interesting pins on the VIDEL chip:

14: EXTCLK connected to pen 15 of the video connector
73: CLK 25
44: VID32MHZ
47: VREQ (also called VREQV)
101: HINT
97: VINT (not connected)
62: CSYNC
3: HSYNC
6: VSYNC
96: COLOR

And a bunch of lines going to the video DAC (U30).

> The non-existance of vertical sync in my Falcon really causes
> another trouble: as it also serves as a readout pulse (telling to the

Yes, that resistor is between COMBEL pin 34 and VIDEL pin 6.

> I believe that there is a device inside F030 which divides a HF

> thus producing two synchronous signals - horizontal and vertical
> synchro.
> Which device is it? Which signal does it use? What are other
> users of vertical sync in F030?

My guess is the VID32MHZ signal going to pin 44 of the VIDEL, so the VIDEL will make both HSYNC and VSYNC. The modulator USES VSYNC too. Between the VSYNC and ground is a 68 (??? it unreadeble) pF capacitator. I didn't find more places that uses VSYNC.

> Please, tell me all you know. Reply to my personal e_mail and

OK, this was my knowledge on this point.

Or make MSA (Magic Shadow Archiver) copy's of all disks on your harddisk and restore the game which you want to play on a floppy. Heavy protected disks can't be backuped like this, but every disk that can be copied with fastcopy can be stored this way.

Hi, I know that you can boot Magic PC with any OS image in the range TOS 1.00
to 2.06. There are even two different ways to do it:

Replace the file MagiC_PC.OS with the TOS image you want to boot from

or

Insert the TOS image you want to boot from as the file ROM.OS. When booting
Magic PC it first looks for the file ROM.OS and when found it will boot from
it. When ROM.OS is not available it will look for the file MagiC_PS.OS and use
that one to boot.

Bye, Hans Wessels
```

Those would the the RealAudio sites - I don't think there is an RA player
for the ST (or even for the Falcon).

>>2. Play sound clips? Does all programs need an external plug in thing to
>>hear sound or can you hear the sound through the monitor?
>
>The ST family is way underpowered to do such things.
>You need at least a 68030. (see even higher)

Incorrect. A plain 8 MHz ST can do a lot of the desired functions; a 16 MHZ
(M)Ste will do most of them well. I have several WAV players for plain STs;
I think the best is still from the DIGISTUF archive.

>Play sound clip, ok but what format?

WAV, AU, and all of the ST-specific samples play will, up to a sample rate
of about 22kHz.

>If it's mod or MID you shouldn't have any problem.

>>3. Get the browser to display the pictures in color... or at lease sharper

>>the words... I can't read them?

>FOr better image more colors, more pixels, get a graphic card if you
>don't want to upgrade your atari for a new good machine. or At least a
>falcon.

Decidedly. However, it IS possible to run CAB in low-res to get 16 colors.
The trick is to pull down the Display menu, take note of what letter to hit
to set it for color, then go to low-res and make the necessary settings
changes. It's not as satisfactory as running 640x480x256, but it beats the
snot out of 640x200x4.

>>
>>4. View video clips? Can I? What would I need to do this?

>>5. I'd like to add sound and/or video clips to my web site. Is there a
>>program that's allow me to play and also record both, sound and video.

>Well In short you need hardware upgrade to do all what you need.

Only some of it. It is possible to convert FLI/FLC files to AVI, if you
don't need realtime display. You're not going to get realtime play on the
Web with a plain ST, though.

>As well as a video digitizer if you want to record your own video.

This much is certain - unless you are creating the video on the ST.

There are a number of availabel options for creating sound samples on the ST
- and since file size is an important factor, the fact that samples will be
mono, probably sampled at 15kHz or lower is actually a plus in this case.
Stereo samples and higher saple rates increase the file size considerably.
The Replay cartridge and Soundlab make a very good combo for creating sound
samples.

Also, if monochrome is good enough, you can use Vidi-ST To capture video
direct from a VCR or a TV With video out jacks.

Combining sound and video to make an MPEG file is still beyond my expertise,
but I'm sure someone will get around to writing the necessary proggies if
there's any incentive for it.

Hello Atarians,

I am wondering if a certain card game is available for the Atari 800 computer. The game is Sheepshead (a.k.a. Schafkopf). Sheepshead is popular in Germany and south-eastern Wisconsin (Milwaukee). I am looking for my brother, he plays Sheepshead. Also, if anyone knows of an Atari ST version please let me know also. Thanks in advance.

p.s. Does anyone outside of Germany or Wisconsin know what Sheepshead is or how it is played, or have ever even heard of it? <grin>

Greetings,

I have several questions regarding CD-Recordable software and
hardware for the Falcon.

1. Does Soundpool's CD-Recorder support :
Pinnacle Micro RCD 4x4/Teac CD-R50s Mechanism

2. Can anyone tell me which company actually wrote CD-Recorder/provide
contact information?

3. Can anyone provide contact information for Soundpool?

Aloha,

John Perez

Try Goodmans PD library in the U.K. They were -still are?- selling a batch of "Discovery Xtra" packs that used to be shipped with STEs in '91. They were charging 10 pounds sterling - dunno what that would be after conversion to $ and shipping. Anyway, you got Sim City, and also the games Final Fight, 9 Lives and Escape From The Planet of The Robot Monsters, and the apps NeoChrome, AniST, and 1st Word.

I have the same problem. I don't use Kobold, but I do find that Thing won't
run Geneva TOS (or whatever application I specify in TOSRUN) when a "TOS"
program is run. One way around this is to have Geneva TOS (or Miniwin or
whatever) as a desktop icon and drag the "TOS" program to it. But this means
you can't pass parameters to the TOS program.

I suspect that this is a bug in Thing, since the functionality to run the "TOS"
program in a window does exist under Geneva, and it works with other desktops,
but not Thing.

I booted the machine with CBHD to be sure everything was done correctly.

>I would come and do it myself but you are too far away :)
>
>I've had CBHD in for about a month now - good performance, no probs.

Well, I regret having tried all of this. If it wasn't for wanting to try
out MiNT I would have stuck to ICD's software. I know a lot of people put
it down here, but I've had absolutely no problems at all with it!
The only bad thing I have to say about it is that it isn't quite MiNT
compatible, but for normal GEM/TOS usage it's great.

I guess I'll have to wait till I visit my brother again so I can reformat
my drive once again with his Mac :-(
It sure would help if there was a similar low-level formatter for the ST.

Another way that I have had some success with is using an auto program
called divert...This will automatically divert a call to A to the HD
partition you specify...I have even managed to get it to work on some of
my original protected games such as F16 and fighter bomber..though the
latter does occaisionally crash...

At the last Tariland meeting, Brian and mario Becroft wired up my
external High Density disc drive as a replacement for the (defunct)
double density 720k drive in an STFM.

It worked flawlessly when reading 720k discs.

You will need a new disc controller (AJAX) to use a high density 1440k
drive. (IIRC High density requires 16 Mhz clock signal, and the ST
controller is only good for about 8 or 10 MHz)

3570. Can I do this on my atari?

Newsgroup: comp.sys.atari.st
Date: 1996-11-27 00:00:00 UTC
From: smooth1@panix.com
Message-ID: <57gjgn$g7d@panix2.panix.com>
Source record: 133127

I have a Mega st2 and a Mega st4 both 4 megs.

How do I:

1. Hear those Internet radio stations? Is there a program I can get to hear them. Do I need on first of all.

2. Play sound clips? Does all programs need an external plug in thing to hear sound or can you hear the sound through the monitor?

3. Get the browser to display the pictures in color... or at lease sharper so I can read the words? I'm using Stik and Cab and it's ok but some sites the words... I can't read them?

4. View video clips? Can I? What would I need to do this?

5. I'd like to add sound and/or video clips to my web site. Is there a program that's allow me to play and also record both, sound and video.

I have a few more questions but I'll save them for later.

Thanx in advance for any help you can provide.
--
Drop in some time. (http://www.panix.com/~smooth1) I'll be glad to see ya.

3575. Kudo's for CAB/STiK

Newsgroup: comp.sys.atari.st
Date: 1996-11-27 00:00:00 UTC
From: *csilver@kendaco.telebyte.com*.*
Message-ID: <57gss8$bk7@news.telebyte.net>
Source record: 133132

Howdy All,

Just a note of appreciation to all the programmers of CAB/STiK and the beta testers of same. Alex Clauss, Dan Ackerman, Flinny, Swapdog, and the many others who have promoted CAB/STiK. Imagine the daunting task of writing a browser these days to compete with Netscape or IE who have hundreds of programmers coding away to compete and promote their product...

The WWW reminds me of a dog chasing it's tail. Two months ago how many Web sites had animation gif's? Now find a commercial site that doesn't!

Today you can run into compressed JPEG's, VRML(xxx.wrl), MAP's and other files that test a browser to the limits. For a handfull of coders to keep up is a remarkable feat. Again, thanks to all :^)

IMHO: If you post the whereabouts of a program, ex. Penguin as HPPING or something else, please list the filename if possible or location so that a keyword search of the index file works:

hp_ping.zip @ ftp.funet.fi/pub/atari/hypertext/ Just a suggestion ;)
BTW: I nice program for an easy HTML Web page creation.

3576. FS/T: Atari ST games [11/27/96] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1996-11-27 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <57gvrv$3rf@dfw-ixnews12.ix.netcom.com>
Source record: 133133

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 11/27/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

Christmas season special

From 11/27/96 until 12/21/96, all Computer item orders over $50 will receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST, Apple][, C64/C128/Vic-20, IBM, Tandy and TI. All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer systems. You can find those FS/T lists on my web site.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very

rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

>system into selecting TT High resolution?

The TT Hi output is ECL NOT TTL or analog so you require a conversion IC. ECL has a balanced output and -5V supply voltages.

3581. Maybe i'm a big mouth, but.....Where's the beef?

Newsgroup: comp.sys.atari.st
Date: 1996-11-27 00:00:00 UTC
From: Michael Grove <mgrove@ridgecrest.ca.us>
Message-ID: <329C1D64.5651@ridgecrest.ca.us>
Source record: 133138

I've seen a Hawk 030 prototype.
I've spent over a hundered bucks in calls to Wizztronics.
I obtained a Genie account a couple of years ago
just to sit in on Wizztronics Round Table.
I was told there would be some sort of newsletter.
I was told there would be a "small" Web page.
I know there are delay with complex products.
But what I would like to know is, if there are
over 80 beta testers of the units assumed to be
mostly in the U.S., how is it not even a peep of
the products performance has not leaked out?
Not one word, published anyway, or a "guess" what
my friend is testing.
Nothing can be kept THAT secret.
Christmas is comming very soon, Wizztronics.
If the unit will not be commercially available,
please make an announcement.
If it is close to market, it only takes
about thirty sceonds to update the people in this
newsgroup about it's progress.
I'm done saving for a Hawk several times over.
I have an order for an Afterburner in with Titan.
I don't care if it's not as fast as the Hawk (in
Wizztronics own words), at least it's available.
The rest of the change will be spent on a Direct T060.
Forget the video funnel. With the PCI bus on the 060,
it won't be long before one can go to the local store
and buy a capture card.
I already have a Falcon that can run Cubase Audio.
Forget the timing problems. It's only one piece of
software. Sound Pool has a long list of products that
i'm sure will be compatible where Cubase is not.
This sounds rude, or maybe just a hopeing sole, but
I even quit waiting for Heather Thomas after she
told me no for a couple years.

>Hope this is a help,

Probably not if they are looking for image files to use with emulators!
This is a Falcon image (note the path!) and so will try and initialise
the DSP, the Videl, and all the other hardware that is not present in
an ST.

I am 99.9999% sure this is NOT going to work with STonX, GEMulator, or
Magic PC...

Nice try though... :)

>find it...

Further tests gave a stunning result:
When I use the "Ataris-ST" drive mode so that all files are put into a
container, it works perfectly. Having a close look onto the files had
no result. I tried adding some characters, but it look slike gemulator
(or gfa basic) never ever recognizes the EOF of files which are among
dos files.

Just for info

The ST family is way underpowered to do such things.
You need at least a 68030. (see even higher)
Play sound clip, ok but what format?
If it's mod or MID you shouldn't have any problem.
FOr better image more colors, more pixels, get a graphic card if you
don't want to upgrade your atari for a new good machine. or At least a
falcon.
Well In short you need hardware upgrade to do all what you need.
As well as a video digitizer if you want to record your own video.
Bye..

Whoops, I missed a lot of this, but presume you are talking
emulators, and your keyboard works as English but you want German?

Well I had the opposite problem, when trying to type, I was getting
the German keyboard when I wanted English,

A small AUTO Folder program cured this, theres also a keyboard
manager cpx that lets you choose the keyboard language type thing and
set the keys,
I cant go into it too technically because I do not understand it, I
just know it works and offers a variety of languages,

CKBD is the name and found on most ftp sites,

HTH and if it doesent, then apologies for getting hold of the wrong
end of the stick..as they say :)

: Is there anything I can do for now so I can use med. rez.? Maybe a
: patch I can load in the auto folder or something???????

No, there is no such patch for the auto-folder. The patch is currently only available as direct patch for the TOS. It is only implemented in the newer version of TosPatch for TOS 3.06 along with the other PAK-patches. The newer version of TosPatch support the US-Tos too, so that english speaking users can patch their TOS. Unfortunately some patches are still implemented for the german TOS only.

Source record: 133146

Ok, I figured out how to let stik find it's config files, now how do I get it to send my password and stuff? I logged on with FLASH 2 and captured the login sequence. The host asks for my Network ID: the prompt looks just like that, but stik doesn't respond to that string. I even tried to use FLASH and it doesn't understand to send my net ID at logon with a waitfor in a script! This is wierd! Is their some way I could login using Flash manually and switch over to STIK after I supply the net ID and Password?

Confused,
Rich

There is, but not in a Mac. The fastest PowerPC with the best available
Emulator can not get near to the Performance of a 68060. Look at a High
End Mac with Speed Doubler running MagiC Mac and then watch the Hades
running circles around it.

Martyn is correct that programs always load into the largest block.

Furthermore, until last year, I had always assumed that if a program makes a Malloc() call to ask for a block of X bytes and there is a block (smaller than the largest block) of X bytes available, Malloc() would use that block. As it turns out, it's just not so! Atari's GEMDOS always chops up the largest block of RAM under all TOS versions, even if you're only asking for 4 bytes! It certainly does increase memory fragmentation when multitasking, too.

Perhaps they fixed this for MagiC, I haven't tested.

It sounds to me like Thing may not be using the proper mode of
shel_write() to launch TOS programs.
Thing should be examining the results of appl_getinfo() to determine that
Geneva does indeed support
MultiTOS-style shel_write().

> this way. But this requires additional resources (For storing and
processing the
> page-tables.) and would perhaps not be worth the effort.

Paging would help in many cases. The biggest problem with it is that far
too many programs
use allocated memory for video operations and interrupt handlers. Even
though this can be
handled on an 030+, avoiding the obvious slowdown caused by paging
interrupt code in and
out of memory on a regular basis means that the user has to be smart
enough to realize
that programs which do this sort of thing need to be left in memory all
the time.

Outside creates virtual memory paritions, and it seems to work very well.
I just don't think
that the backward-compatibility level can ever be upped to the point where
the average
user can understand how it all works and deal with the consequences. This
is not the fault
of Outside, it's the fault of Atari for not having created a design which
promoted the
future use of virtual memory.

Hi there!

I am looking to purchase an Atari SLM804 Lazer Printer in working order. I won't be able to pay for it until December 6, 1996 though since that is when I next get paid. It also must have the cable to hook it upto the Atari STe port AND if possible so an attachment so I can hook up a hard drive in the chain since I have a SCSI hard drive and CD rom drive on my unit. The MOST I will be willing to pay is $150+shipping and it would be PREPAID via a money order (or cashier check from a bank).
Thanks...PLEASE respond via e-mail too.

Who cares..The emulator was for transition purpose when there was little native
apps when the PowerMacs where introduced in 1994. Today, I hardly have any 68k
apps on my HD, strickly native..

A PowerTowerPro using a 225mhz 604e would crush any 060 machine..

Looking for the best way to back up about 100 original copies of copy-protected ST games. A many years ago, I remember seeing something about a cable and software for this purpose. There may have been two different ones, a commercial package and the other shareware. The shareware/PD one may have been a do-it yourself cable. It has been along time and don't remember all the details.

PLEASE respond in E-mail since my access to this newsgroup is limited.

Take care and thank in advance, Jon

I have used MG-FTP 1.3 successfully, but I also seem to get the
two bomob problem if I run it after I have run CAB. I'm using STiK 1.12
and CAB 1.50 on a TT.

From: Ben Hills <ben@imperial.co.uk>
Message-ID: <329E0FC3.BE6@imperial.co.uk>
Source record: 133021

I recently posted a list of instructions on how to obtain a working Atari Emulator for Windows as a response to a question on Atari Emulation. That was about a week ago, and I have received about thirty five E-Mails so far regarding this posting.

I think is't great that so many PC users want to be able to run Atari software on their machines. I just goes to show that even with the demise of Atari themseleves, people still want to use an Atari.

Cheereo,

Ben Hills.

Hi all,

From all the articles and news postings I have read I have now become very interested in N.AES.

Does anybody out there know if there is a demo version available and where I may get it from.

Thanks,

Ben Hills.

I don't think there is a demoversion available. If you want a bit more
info about N.AES though, have a look at Mille Babic's homepage
(www.tripnet.se/~mille) and my Atari-page (www.stud.ntnu.no/~josk/atari/).

Try this: Dump version 103; get version 102. Then, delete the .inf
file. Make a new .inf file with the same name, but no data. Then it should
work (at least it works for several of us like this.) However, you may
need to generate a new .inf file every time you want to use it.

3619. FS - SLM804 Laser printer-priced to move!

Newsgroup: comp.sys.atari.st
Date: 1996-11-28 00:00:00 UTC
From: rjre@aol.com
Message-ID: <19961128165900.LAA21881@ladder01.news.aol.com>
Source record: 133026

FOR SALE AND PRICED TO MOVE QUICK:

Atari SLM804 Laser printer with phantom modified interface,
extra paper tray, and an almost new toner. The phantom mod
adds power to the interface so that the printer can be powered
off and still hooked to the DMA chain. Without the modification,
an SLM needs to be powered on or a connected DMA hard drive
will not work. I am asking only $110 for the whole setup,
plus shipping - a real bargain!.

I live in California for shipping considerations.

If interested, please email me at RJRE@AOL.COM

3620. FS - ST application and game software - bargains

SOFTWARE FOR SALE... CHEAP!

****

Application Software bundle including:
(all manuals included except for titles with a *)

Pagestream
Superbase Professional
Phasar
LDW Power
Degas
Word Up
Xboot (Boot Utility)
Neodesk
*Neochrome
*Printmaster Plus
Thunder
Procopy
Label Master Elite
Warp 9
Knife ST
Turbo ST
TurboJet
Revolver
G+plus

All for only..... $75, or make me an offer for part
of the package. I would prefer to sell bundles of
titles to make my packing and shipping chores a lot easier.

****

Games & Entertainment for sale CHEAP!
(all original disks, but I lost the manuals)

All games only $3 plus shipping, but I request the
purchase of 5 games to mak the packing and shipping
worth the effort. Or take the whole lot for $45 plus
shipping! (that is less than $2 a game!)

Terramex
Arkanoid
Gauntlet
Crystal Castle
Speedball
Metrocross

Xenox
Blockout
Music Studio
Arena
Tv Sports Football
Star Ray
Uninvited
Borrowed Time
Champion Wrestling
Hex
Sundog Frozen Legacy
Electro Solitaire & 21
Star Glider
Leather Goddess Of Phoboes
Word For Word
Whishbringer
Flip Side
Backgammon
Witness

Please send me email if you are interested at RJRe@AOL.COM
I live in California, for shipping considerations, and would
prefer to keep shipping in the US.

3621. Atari bundle and more for sale

Newsgroup: comp.sys.atari.st
Date: 1996-11-28 00:00:00 UTC
From: japolis@nyx.cs.du.edu
Message-ID: <57kje8$t6r@nyx.cs.du.edu>
Source record: 133028

Hello! I have the for following items for sale, shipping is additional:

ATARI software bundle for sale:

GENEVA and Neodesk
FirstGraph presentation software
Diamond Edge
Diamond Back II
Warp 9 v3.7 (no disks now, but I'll look around)
MaxiFile from CodeHead
Mini Office (Nicely done graphs and stuff, from UK)
Learn to Read with Prof...ages 4 to 9
General Store with Bentley Bear, grades 4-7
Mixed-up Mother Goose...ages 4 and up
Image Cat cataloguing software for pictures
Atari ST Basic sourcebook and tutorial

The whole bundle... EVERY ATARI item, for $50

MAC software and hardware:

Adobe ILLUSTRATOR 5.5 upgrade disks only, no manual $50

Backmatic 2.0 highly rated automatic backup utility $5

Correct Grammar 3.2, $20

Expresso Calendar, $20

Quicken 4, $5

Grolier Multimedia Encyclopedia 4.0 $20

Intermail/ Microsoft mail 1.36. many users. $5 includes shipping

Rental Center helper software and disks and big manual $5 includes shipping

PageMaker 4.0, manuals, disks, box, etc. use for cheap upgrade- COMPLETE $100

CD-ROM drive and software, double speed, "Power User brand" complete with
all materials and software... good as new... $100

Car Stereo items for sale:
All items are used but in working condition. No, They are not stolen, I
just went through a phase where I liked installing and swapping around
the stuff. Life's too busy to mess with it now. My lack of free time is
your Big Audio Bonanza. And no, I'm not a dealer.
Some items have boxes and/or instruction books.

Car Stereo:
Mitsubishi RX791EM AM/FM High Power auto reverse cassette deck I don't know the power output other than it says "high power" on the front and it was always plenty loud for my rock and roll. There is a color code table for all the wires and connectors so you'll know what goes where. All parts are there, faceplate, knobs, etc. and it is the two-knob kind (not DIN) with an analog tuner, pushbutton presets, auto reverse, Dolby, and "NK" noise killer. All in all a pretty good deck. $make offer

Car Stereo AMPS:
Craig PowerPlay 48 watt amp $make offer
Concord HPA51 100 watt amp $make offer

Car Stereo extra special stuff:
Yamaha YEC-400 Electronic Crossover $make offer

Car Stereo Speakers:
Sony ES-S52 40 watt Coaxial 5.25 inch round speakers with grilles $make offer
Kenwood KFC-162 25 watt Coaxial 5.25 inch round speakers with grilles $make offer
Craig V203 10 watt Coaxial 5.25 inch round speakers with grilles $make offer

Car ALARMS:
Cliffalarm IMS (interior monitoring system) made by Clifford. Remote operation from fairly far away. Siren chirps when alarm is set or unset. Visible flashing LED in the car warns theives that the car is alarm protected. LED on the remote tells you remote is working fine. Panic alarm feature sounds the alarm if you hold down the remote button for 2 or 3 seconds. Shock and motion sensor is sensitive to breaking glass, but not to leaves dropping or cars passing by. Door triggers. Automatic reset after predetermined time to protection mode.
$25

Audiovox car alarm *BRAND NEW IN BOX* Model AA9147 with 2 remote transmitters, remote panic, built-in adjustable shock sensor, instant-on for hood and trunk, manual override, dash mounted status condition LED, active operation, 114db siren, starter disable
$50

Home stereo stuff:
DBX NX-40 Tape noise eliminator and disc decoder. Much better than Dolby.
$make offer

CAMERA stuff:
Hasselblad view screen for 500CM:
Plain screen #42200- $20

Zeiss Ikon/ Contaflex 35mm camera marked "(lightning flash symbol) matic" on the top, and Contaflex on the 50mm 2.8 Zeiss lens, Compur-x leaf shutter. Lens is "convertable" variety, switchable from 50mm to 35mm by changing the front elements, although I only have the 50mm lens element. Built in meter, and even a rudimentary "auto" mode. With case. I'd call it very good condition... no dings or dents, the textured black covering is perfect, the chrome is perfect, and the black finish is perfect.

Optically, perfect. The only rough areas are the battery compartment has a little corrosion on the inside and a little brassing on the outside. A "ready-case" is included but the leather is torn where the front connects to the back of the case. Surely a collectors item- $150

Metz SCA-351 adapter for Leica $25

Jeff Apolis 303-473-0511

> at this point.

b > Where can it be found? An FTP site?

Possibly, but I only uploaded it to Genie and Fidonet. I can email
you a UUencoded version (ZIP files is < 15K). It also includes
RAM_HOG for testing "Out of RAM" error messages and recovery.

BTW, what RAM_LEAK does is insert a magic word on both ends of every
Malloc() RAM block and tests them 4 times/sec to see if they have
been overwritten. It won't help with BSS or stack overflows.

Rich Tietjens (atari@teleport.com.REMOVE.THIS.TO.REPLY) wrote:

: Those would the the RealAudio sites - I don't think there is an RA player
: for the ST (or even for the Falcon).

Darn! OK.:)

: Incorrect. A plain 8 MHz ST can do a lot of the desired functions; a 16 MHZ
: (M)Ste will do most of them well. I have several WAV players for plain STs;
: I think the best is still from the DIGISTUF archive.

Where can I get it from?

: WAV, AU, and all of the ST-specific samples play will, up to a sample rate
: of about 22kHz.

I can live with this... for now.

: Decidedly. However, it IS possible to run CAB in low-res to get 16 colors.
: The trick is to pull down the Display menu, take note of what letter to hit
: to set it for color, then go to low-res and make the necessary settings
: changes. It's not as satisfactory as running 640x480x256, but it beats the
: snot out of 640x200x4.

Going to try this! I figured out how to convert jpgs to gifs and check
them out with a gig viewer I have and it looks pretty good but it's not
the same. I can't see it when looking at a web page. I was hoping there
was a way to get the text to come up in 1 window and the pictures in
another... I guess using 2 external programs or something.

: Only some of it. It is possible to convert FLI/FLC files to AVI, if you
: don't need realtime display. You're not going to get realtime play on the
: Web with a plain ST, though.

Darn! Darn! Darn! Oh well I'll take what I can get. Where can I get it
from?

: This much is certain - unless you are creating the video on the ST.

I'd like to create some videos on my st... what would I need?

: There are a number of availabel options for creating sound samples on the ST
: - and since file size is an important factor, the fact that samples will be
: mono, probably sampled at 15kHz or lower is actually a plus in this case.
: Stereo samples and higher saple rates increase the file size considerably.
: The Replay cartridge and Soundlab make a very good combo for creating sound
: samples.

Ok... I'm going to try and find these programs.

: Also, if monochrome is good enough, you can use Vidi-ST To capture video
: direct from a VCR or a TV With video out jacks.

Does this mean the video would be black and white?

: Combining sound and video to make an MPEG file is still beyond my expertise,
: but I'm sure someone will get around to writing the necessary proggies if
: there's any incentive for it.

I hope so!

Thanx for your help! I'm looking forward to finding out more Info.

Date: 1996-11-28 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <961128Z192332.713dave@mbha.demon.co.uk>
Source record: 133037

Greetings all,

Has anyone out there had any success with getting CoMa voice and fax to work properly with CoMa? For some reason (I am sure it is something I am not doing right), when a fax call comes in, CoMa picks up the call, plays the outgoing message OK but then either CoMa or the modem or the remote site is dropping the line. Result? No fax. Bugger.

I thought that the combination of Coma and the modem would receive both fax and voice, playing the outgoing voice and receiving an incoming voice or fax as appropriate. Bugger.

I have sent several emails to the author (Siegfried Hartmann), whom I am sure is busy but he doesn't seem too interested.

I would love to register this product because I think it is a good program, but at 119UKP I think I would rather get the demo working first!

Any thoughts out there? I would be very interested in hearing from anyone who has got the combination to work...

Thanks in advance for any replies (posts or email).

Thanks for taking the time to read this message! This is about a lady that gave all she could to everyone, including me. Her name is Wendy.

When I was young she became my foster mother after my real mother had abandon me. Never having any kids of her own she became a foster parent. That I got to be in her care was probably the best thing that had ever happened to me. She had other foster children and even ended up taking care of many of the neighborhood kids.

Wendy is a lady that just never gave up and always gave more than anyone could imagine. I no longer think of my real mother as mother but rather Wendy as my only true mother. I know that I'm not the only one that thinks that way either. It wasn't just kids that she helped it included the elderly, the disabled and the just down and out. What it takes to qualify for a saint is something I never found out, but I know it can't be more than the things I saw this lady do for anybody. Even people that had wronged her could find themselves looking up at her while she helped them when they were down.

I'm 26 now and many of the things I'm telling you I never really realized until now. Since I was a kid she has helped me with everything from recovering from my mistakes to just being there to say "You can do it... It'll be okay." I've never been able to make a good attempt at trying to repay her for all she's done for me and I'm not alone. Many people just have taken for granted the things she's done for them.

I know by now you're asking yourself why I've posted this letter. Well, to be honest and straight with you it's because I would like your help. If there's one thing that I've learned from Wendy it's that, "We are our neighbors keepers." You know the golden rule, "Do onto others as you would have them do onto you." Anyway now Wendy is an older lady that is disabled and can't do as much as she used to. With the disability sometimes expenses can be too much. I now live in Arkansas and can't be of much help. With no real family I'd like to do something to try to repay all she done for me and many others.

That's were you come in. See if you can think back to someone that helped you no matter how big or small. Maybe it's someone you can't even remember or have lost touch with. For that moment picture Wendy and say, "I'd like to repay that kindness." I wish you would sit down and write a small note saying "Thanks for being the generous person that you have been!" If you could include something to help out. Maybe it's a five dollar bill, a book of stamps, even a dollar. Oh and would you also tell her the Steffin sends his love. Her birthday is next month on the 27th and I'm hoping

I can make this own a very memorable one.

Thanks for reading and if you choose to help God pless you.
Her address is

Wendy Mcghee

josk@stud.ntnu.no (Jo Even Skarstein) said:-

Hello!

I must say that I triple checked, still the same thing, PPPD can't set
a serial speed below 300. I even checked with nothing in the system, no
modem.cpx, no xcontrol.acc, not a single ACC (only nohogg.acc to allow
multitasking MiNTnet under old AES), and only 3 prgs in AUTO: drvin, scc,
and mintnp. As you seem to be sure of the opposite, we'll perhaps have to
call M&S to hunt a ghost-in-the-Falcon? :-)

>I have 2.2.0

Me.too@aol.com... humm... the one included in PPPKIT 1.4, prg is
134987 bytes long, compiled on 4 Aug 1996 18:38? I found it also in an
archive on fu-berlin, exactly the same.

>I *never* use MODEM.CPX, since it messes up for some programs.

Which programs?

>most of the time I just use chat, and the port is always set to 57600.

Perhaps another serial speed setter somewhere? What happens if you set
110 in your .ppprc? You posted your .ppprc, but have you something in the
other pppd parameters file, /etc/ppp/options? Mine is empty, 0 bytes. Here
is my /etc/connect:

```
---------- 8< ---------- 8< ----------
connect 'chat -v -f /etc/chatfile'
/dev/modem2 ; last thing I didn't test: your ttya here
crtscts
defaultroute
disconnect 'chat -v -f /etc/disco'
-bsdcomp
-pred1comp
user bkozlowski ; only for PAP
asyncmap 0x00000000 ; better throughput than default 0xFFFFFFFF
---------- 8< ---------- 8< ----------
```

Bye! Bruno.

I certainly object to anyone acting as net censor. It's bad when
governments do it; it's awful when individuals do. The right way to do
this is to request a moderated group.

I am sympathetic with you, but it really would be the thin edge of the
wedge.

f> electronic devices, specially those switching at high speed.

Yes, that's right!
But the Falcon's fan is quite a useless one!
It cools the metal shielding, nothing more! It would be far better to move it to another place. I have an FX equipped Falcon and I've installed up to three fans: one on the left side, near the STE joystick ports, bent down 45 degrees, cooling the CPU; one in the middle of the board, behind th disk drive, cooling the Videl chip and mostly the DAC; a micro-fan (about the size of a coin) right in front of the DSP. As you can see, none of them is in the original place!
Moreover they are very quiet. The main noise source in my system is my external SCSI box. It has a big "diesel" fan that I'll have to change, sooner or later.
Ciao,

From: atari@teleport.com
Message-ID: <57j7qh$k3a@nadine.teleport.com>
Source record: 133050

I've had several email requests for this, so in order to reduce
frustration levels, here it is for all to see:

```
ALLOCMEM = 150000
SERIALPORT = Modem 2
CDVALID = TRUE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 1500
DFB_SIZE = 580
RCV_WND = 5360
PROTOCOL = 0
UP_RESPONSE = 2
USERNAME = atari
FULLNAME = Rich Tietjens
HOSTNAME = teleport
NAMESERVER = 164.67.182.249
NAMESERVER0 = 199.108.254.11
NAMESERVER1 = 205.198.190.100
IRCNICK = RichT
IRCSERVER = irc.warnerbros.com
IRCPORT = 6667
IRCPONGMSG = Enter the Wormhole!
```

Probably the most critical item is the Allocmem paramter; the info
between Client_IP and Username are also importnat, but I beleive
DB_Size is actually obsolete.

This is working perfectly right now on my TT with all clients (Newsie,
CAB, CAB_030, MG-FTP 1.03, etc.) and worked before on a Mega 2 ST.

Visit us at http://www.teleport.com/~atari

It is called TOSRUN.

Even though I set this correctly, Thing still won't launch the named application
when I launch a "TOS" program. This problem only affects Thing, however.

I am using Geneva release 5 with FreeMiNT 1.14 and would recommend it to
anyone in most cases.

But if you don't want networking, virtual consoles etc. then you could do
perfectly well without MiNT. In this case you could also use MagiC, for most
people I don't think there would be a lot of difference between the two.

It is also worth noting that the high density drives work fine for writing
too.

>You will need a new disc controller (AJAX) to use a high density 1440k
>drive. (IIRC High density requires 16 Mhz clock signal, and the ST
>controller is only good for about 8 or 10 MHz)

I would just like to clarify this. You do not need a new floppy disc controller
to use a high density drive in an ST. In this case, however, the drive will only
act as double density - you won't be able to read and write high density discs.

The only time you need an AJAX controller is if you want to be able to read and
write high density discs to their full capacity with the drive.

First of all, I'm so glad that PowerMacs can finally run Windoze 95 since it's what's current. And I am hoping it would be around Pentium speed as the last Windoze emulator ran at the speed of a dirt cheap 386 or 486.

But what me make my case and point, one...more...time.

Apple makes PPC computers with the PPC chip, MacOS, and software translation for 68K instructions. Ok...

But at the beginning, IBM said it would do the same thing with Intel-based programs. Why not a PPC computer with a PPC version of OS/2 or Windows 95 and software translation for Intel processing. This way, they have a machine that is far more efficient than what Billionare Bill endorces and can run the same type of needed software as well.

This is what the Aptiva should have been like folks, and it's a great looking PC. :)

>(1.02 perhaps) , it works most of the time fairly well.

I've been unable to get MGFTP103 to work. It keeps saying that it
is unable to find the resource file. MGFTP102 works, but often gives
2 bombs, and then the only solution is to replace all files in the
folder. It also has difficulty in downloading the files you have
selected from the menu.

It seems much easier to use the FTP command line available from my
provider.

I must sya that I agree with you 100%. I would say that Wizztronics
have digfed their own grave. I know of people who represent firms
who sell Atari stuff and even they havn't heard one sound for a long long
time. Wizztronics is even worse then Atari ever where to tell what is
going on and not. How many doesn't remember when they shouted all over
the world. "The Barracuda is Ready to Ship!" "The Hawk is now ready".
Then nothing... I waited to order tha Afterburner040 because they had
prommised us that the Barracuda and Hawk was ready. I finaly gave up
waiting and got an Afterbruner040 and I'm happy. As you said, the
Barracuda and Hawk might (I'm not even sure as noone has actaully
used any of them) be faster but who cares then the AB040 is available
and works and the others aint?

The Hades is also a nice machine.

At the risk of starting another row with Andreas :-), this sounds right.
Thing is primarily designed for use with MagiC, where it calls V52.APP
without problem. I know from experience that MagiC and TOS/Geneva handle
shel_write() differently and have had to implement two different
versions of the call for the next version of MultiPlicity.

It's a virtual memory manager. You need an 030 or higher CPU (lower versions don't support virtual memory) and it enables you to allocate some hard disk space as virtual memory at the expence of some slowdown and (IMHO) stability.

As far as I know, you cannot use the Nec without a graphics card,
because the TT will look for a TTM195 for the 1280x960, otherwise
as you know, you can only do TT medium without a card.

Unfortunatly there isn't adn I can't see why there havn't been such a
program made! It looks like a ideal product for the Falcon. Griff did
work on one called TDSM which the specs sounded just awesome. If I understod
it all correctly it was alomst finnished but got scraped of some strange
reason. :-(((((((((

There is a old program called EPSS which works on the STe/TT/Falcon. It will
let you have 8 channels of 8 bit sound. It's very good but doesn't make any
use of the new hardware in the Falcon so the quality of the sound isn't that
high. It does work though and has even filter simulation and works toghether
with Cubase giving you a integrated AudioWorstation with sequenser and
soundmodule in one. You can even assign differnet sounds to different keys
building up multisampled instruments. It does also load .MID files to be
replayed as well.

You can contact Copson Data (the makers of Zero-X) about EPSS at (if it's
still valid):

conny@copson.se

I would like to see a DSP based version with 16-bit sound and atleast 16 voices,
but it looks like it will never happen. It's very sad as the Falcon has
everything except the program to do it. :-(((

Hmm... BTW. I think I have heard that someone was about to convert EPSS to use
the DSP on the Falcon. I have to check that my self!

Actually, Windows NT will run (or does now in beta) in native mode on the
PPC. Thus, soon, PPC chips, or CHRP (Common hardware reference platforms)
will run MacOS, BeOS, NT, and various flavors of Unix in native mode.

>GIF or .JPG, or is there a more simple solution??

GrafTool says it loads the .PCD format. I use the program for converting 24-bit TIFFs to GIF, so I can't vouch for how it handles PCD. This is an ideal conversion program because of the way it optimizes a GIF's bit-level to colors used, creating smaller, more effecient Web graphics.

The program is registerware (freeware). Send the author e-mail and he will send you back a key to make the program fully functional (otherwise there's only one save per session). Because it's freeware, there's no hassle with Unisys (the company that owns LZW, the compression method used in GIFs and some TIFFs).

The version I'm using right now is dated 18.3.96, so some of what's pasted below is out of date:

Package-Name: GT960204.LZH

> Could anyone please tell me how I can manage this?
>
>cheers
>--
>Neil Blue

Dear Neil,
We need to know what model Atari ST you are using (i.e., 520ST, 1040ST, etc.). The later model 520ST's and all the 1040ST's will read a PC preformatted double sided, double density floppy disk. Download your software with the PC and copy it to the floppy disk. Turn on your Atari computer with the boot disk in the floppy drive. Take out the boot disk and put in the new floppy disk. Double click on the A Drive icon and you should be able to see the contents of your disk. Feel free to E-mail me if you have any further questions. SRODULSKI@DELPHI.COM

In a weak moment, I purchased the following:
520ST (TOS in ROM) w/mouse,joysticks
SC1224 color monitor
SC124 mono monitor
SF314 ds/dd floppy
SF354 ss/dd floppy
SupraDrive 20MB Atari Hard Drive
Magic Sac + ("turns Atari into Mac")
Mouse Master mouse/joysticks switchbox
Star NX1000 printer

I've gotten some downloaded software to work on it, but I don't have the time to delve into this. Please e-mail offers. I live in St. Louis, MO, USA.

3682. Re: USR Sportster Voice with coMa

>Has anyone out there had any success with getting CoMa voice and fax to work
>properly with CoMa? For some reason (I am sure it is something I am not doing

CoMa works well since 2 years. Successfull with an old ZyXEL U1496+
and ELSA 28K8 / 33k6 TQV. I'm user of the voice, data and fax part.

>right), when a fax call comes in, CoMa picks up the call, plays the outgoing
>message OK but then either CoMa or the modem or the remote site is dropping
>the line. Result? No fax. Bugger.

You have HSMODEM7 installed?
How large/smal is the data buffer in HSMODEM-Setup?

>I thought that the combination of Coma and the modem would receive both fax
>and voice, playing the outgoing voice and receiving an incoming voice or fax
>as appropriate. Bugger.

What kind of Modem? Sure that you modem can handle fax class2?

>I have sent several emails to the author (Siegfried Hartmann), whom I am sure
>is busy but he doesn't seem too interested.

I'm sure that's a problem by time..
So he send a answer most in tree days after the question. (Mausnet)

>I would love to register this product because I think it is a good program,
>but at 119UKP I think I would rather get the demo working first!

The Demo only can send 500 lines per fax.
So we have a new demo was can't receive faxes?

>Any thoughts out there? I would be very interested in hearing from anyone who
>has got the combination to work...

Sure CoMa have some points of trouble. IMHO, that's better than all.
Bevor CoMa i take TeleOffice, a Demo of StarFax an also..

No comment about..

regards, robert

>MN> stamps/envelopes) = $8 net. Wow.
>
>Thank you. Your message has been saved. :) It should be required
>reading for _everyone_ getting an internet account.

The bit about the number of newsgroups is simply wrong, however. In
my local server alone, there are over 17,000 newsgroups. Regardless;
if there were a million newsgroups, it wouldn't make any difference.
The chain letter spams are illgal in every civilized country of the
world - and probably in France, too <G>). The numbers given in these
lying scams are simply impossible. In order fro everyone who
participates in the first 5 iterations to make $50,000, more than 10
billion people would have to get involved. Last Ichecked, there were
less than 6 billion people alive, and generally speaking, children
under 10 don't have either Internet access, nor a dollar.

And this spam brings up a major question: Should the comp.sys.atari.*
hierarchy convert to a moderated format? That would eliminate spam,
but it would also add another day of delay in postings, since the
moderator would have to approve each posting before it would be
broadcast to the world.

As it turns out, BACKPLAY isn't needed with NED 2.2 under singleTOS if
you run NED as an accessory - just remember to set NED for single play
BEFORE downloading any sounds, or you'll get a looped playback. This
is using CAB_030 on a TT - I assume ti would work the same way on any
ST-type system.

3687. Free MIDI program - Merry Xmas!

Newsgroup: comp.sys.atari.st
Date: 1996-11-29 00:00:00 UTC
From: Flatniner <ivy@teleport.com>
Message-ID: <01bbde16$514761e0$3e7ca3ce@Trixie>
Source record: 132990

While cleaning my closet I found an Atari ST
program I once used for a while.

It is Passport's Master Tracks Jr: packaging, disks,
and manual are all here. I assume it all is working
but I can't test it as I no longer have an ST.

Anyway, first person to email me gets it for free,
all I ask is enough dinero to cover postage. About
$5 ought to cover it. I know it's probably obsolete
ware, but for the tight-budget midi musician, it
is a workable sequencer.

I most likely won't check back with this
group, so email me at:

```
Bugfixes / simple improvements:

( ) Insert-Cursor starts at the first visible object, not at the first
of the window
(+) Correct wrong info-output for partitions > 1GB and crashes due to
that bug
( ) Visible separation of "Open"- and "View"-list in the application
overview
(+) Fix double use of Alt-L in Fileinfo/program (German Thing only)
(+) Fix unwanted enabling of "Delete" when scrolling in the application
list
(+) Close color file when reading the old INF-format
( ) Fix AV_COPYFILE-problems with MagiC Mac
(-) Drop counting of files when Kobold is installed to copy even 1 file
(+) Sort fontlist case-insensitive
( ) Evaluate "Page Up", "Page Down" and "End" on Mac- and PC-keyboards
( ) Evaluate 'MNAM' and '_MCH'-cookies for the info dialog
( ) Color miniicons in group windows
(+) Add a backslash in fsconv to folders on non-TOS-filesystems that do
not exceed the maximum filename length
(+) Use color miniicons for folders which have a big, but no small icon
(+) Add "Bei Bedarf im Console-Fenster starten" to the default
application
( ) New menu entry "Fontselection"
(+) Ignore x-Bit for group entries which are on a VFAT partition
(+) Fix wrong behaviour when updating an iconified window with automatic size
adaption enabled
(+) Keep upper left corner of window with automatic size adaption, if
possible (maybe configurable in future)
(+) More code savings with multiple access to object trees
( ) Search program receives parameter when installed as an application
(+) Fix crashes when copying more than one file when the source is a
drive's icon
(+) Check for existing Clipboard-folder with Fxattr(), if possible
( ) Respect all selected objects with the option "Auswahl uebergeben"
( ) Call drive info when receiving AV_FILEINFO for a root directory
(+) Fix deleting folders with SingleTOS
(+) Enabled setting function keys for icons on the desktop
(+) Better search for icons for an ALICE-window
(+) Color icons for ALICE-windows
(+) Fix second evaluation of the exit-click when the info-dialog has
been called by selecting its menu entry
(+) Workaround for MagiC Mac running the SCSI driver by Steffen Engel

More difficult improvements:
```

```
( ) Save colors for groups separately for < 16 and >= 16 color
resolutions
( ) New option "Get attributes" for groups
( ) "Fastload"-format for icons (external program?)
( ) PopFold-Support
( ) Try Frename() first and fall back to copy + delete if impossible
( ) Possibility to switch between the "Open"- and "View"-list in the
application overview
(-) Send parameters with or without full path
( ) Eject medium
( ) Possibility to continue after errors while copying/moving/etc.
( ) Automatic adaption of drive icons to the really existing drives
(optional)
( ) Fileselector inserts TTP-parameter line
( ) Support external font selectors
(-) Spaces in filenames
( ) Alt 1 to Alt 6 for drives 1: and 6:
( ) Show uid/gid of files/directories and allow alteration
( ) Show atime and mtime
( ) Built-in diskcopy
( ) Use volume labels for drive icons automatically (optional)
( ) Save window positions in resolution-dependent INF-file
( ) Setting of Psetlimit()-value for installed applications
( ) Show icon in fileinfo-dialog
( ) Save volume label in diskformat-dialog
( ) Automatic saving of parameters on exit (optional)
( ) Load parameters from a different directory
( ) Ask before starting an .ACC as a real Accessory
(-) Correct support for symbolic links
( ) Clean up Drag&Drop-sourcecode
(-) Drag&Drop with automatic opening of folders
( ) Full 3D-look for dialogs (optional)
( ) Thing-console appends output of new programs
( ) Switch to own shareware-key routines
( ) Display free diskspace in a window's info line (optional)

Explanation:
( ): Not yet begun
(-): Begun, but not yet finished

Hi,

I am a rare collector of Atari "VAPORWARE" and one item Atari never released was the Atari ST PAD Stylus touch screen computer. I currently own two of these prototypes and thought that these were the only 2 in existence, but I am told, others have ST PADS and I wish to speak with them and trade technical data and spare parts with them. These are EXTREMELY rare prototype and must be preserved and maintained. If anyone wish to see an image of one of these ST PADS, please view my (very much under contruction) web site at:

http://members.aol.com/Cvendel/vaporware.html

If you own ANY kind of rare prototype and would like to talk with me about what I own, please email me at: cvendel@aol.com

thanks

Curt

Thanks for the responses to my original question. If anyone
can source a Rygar for the ST, I'll send some cash (or blank
disks if you can't bear to part with it) your way.

Cool. So how is the ST PAD? Does it work? Is it any good?

Well there is the Sparrow and I have heard that some have it.

: The BeBox destroys any 040 class machine.. I saw one in Iowa City and it
: rocks..

And, what's more important, the Be OS (named, logically, BeOS) destroys
ANYTHING else in its responsiveness and ease of programming (ok, the
latter is hearsay to me). I saw their demo in Hannover, Germany, and
everyone was fascinated regardless of the platform they had. Atari,
Amiga, Mac, Windows, and Linux users alike were rendered breathless
by what this machine does within its hardware limitations. Or, as
someone in comp.sys.be put it (I'm paraphrasing here): Compared to
the BeBox, the responsiveness of an SGI Indy feels like driving a minivan.
I have seen computers which are more responsive, but these *cost* as much
as a minivan.

For further info, see http://www.be.com and/or comp.sys.be -- or join
their mailing list, the web site tells how.

: It's official, the Be OS will be shipped with all PowerComputing machines in
: the Q1/97..

Yeah, a REAL operating system with a Mac clone. The times they are
a'changin'...

Yours,
Erik.

:>
:>Greetings, Jouni Alkio, Finland
:>
:>
:>

The noise you get depends on the particular machine. The fan is a small 12 volt dc unit that brings air from underneath and blows it up against the keyboard underside where it flows upward and toward the rear. Thus it creates a cooling effect close to the cpu and maintains a flow past the hard drive.

Some of these fans can be noisy themselves and replacement with a similar unit- same voltage- same power draw- MAY help. But often the noise is a vibration resonating in the sheetmetal shielding or the plastic case. Shims might help, but expect to remove all or part of the case to do this.

A solution could involve a switch to turn off the internal fan. Then you could place a much larger but quieter 'whisper' fan under the Falcon blowing up or on top of the Falcon- also blowing up. External power would be required for the big fan.

You can prepare very good Faxes with PGS.
Just make a document and print to disk using the IMG Driver.
You can print the IMG at setting # 5 200 DPI.
I have two INF files for PGS so that it loads the Driver IMG just for
FAX.
Junior Office FAX works very well.

From: jab@walrus.com
Message-ID: <57qh37$imr@alice.walrus.com>
Source record: 132918

Hi All,

First I would like to thank the developers for all the work they have done on the pieces of this system. That said, I have a few problems.

I am using CAB_030 on a Falcon in 640x480x256 with STik 1.12 and CAB.OVL 1.20h (the second one, not the one in the STIK_CAB package). Occasionally, CAB will lock up at a Resolving host..... message. The mouse still moves, but screen redraws and keyboard input are stopped. I have to reboot to get out of it.

Also, I don't seem to be able to view URLs with CACHE_ED 0.5 anymore. I know it worked in the past but now the option seems to be greyed out all the time.

And on that subject, does the Module folder do anything any longer? I had to take CAB.OVL out of there in order for CAB to see STiK.

Lastly, what is the best (only?) way to return to URLs while offline, avoiding the Network is Down message and the emptying of the Cache information for that URL.

That's it,

John Bates

From: jab@walrus.com
Message-ID: <57qh39$imr@alice.walrus.com>
Source record: 132919

Hi All,

I got the PPP Kit from cnam and have hit a snag, besides not being able connect. When OLDGEM.PRG runs, I end up at the desktop with lower case letters on all my files and none of them seem to be executable anymore. Yet, if I click on icons installed on the desktop, the programs run fine. I can't change the case of any file.

I have managed to connect with the TAF package. What is the difference in the pppd file in the two packages?

Later,

John Bates

3708. Parting out Atari TT030 System

Newsgroup: comp.sys.atari.st
Date: 1996-11-30 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <57qi0u$4dl@kendaco.telebyte.com>
Source record: 132920

Parting out my entire Atari TT030 System! Details below:

- TT030 comes with Atari Works, WordPerfect 4.1, Breakthru 2 (MIDI), Straight FAX!, XBoot III, Diamond Back 3, Data Diet 2.0, Invision Elite 2, STeno, Gram Slam, Imagecopy 4.0CD, PageStream, Bitmaker, MegaKern, Mountain Reader II (registered), Cardfile 4.06, STalker 3.05, MaxiFile, Warp 9 3.81, Speed of Light 3.8 (registered), lots more!

- Price of all items includes shipping in continental U.S.; buyer is responsible for COD charges.

- Important point: I _must_ have a buyer for all items before sales are considered final and any items are shipped! Offers will be accepted only on the understanding that they might be cancelled unless everything goes. I'll wait about 2-3 weeks for this to happen. Items for which offers have already been received will be so marked, so everyone will know the status. Here's what's up for sale:

1. Atari TT030 with TOS 3.06, revision "H" $875
motherboard, 4 Mb ST RAM, 16 Mb TT RAM,
HD floppy, 290 Mb internal Maxtor HD,
48 MHz CaTTamaran accelerator
2. CTX CMS-1561 15" multiscan color monitor $250
3. Quantum 345 Mb HD w/case & power supply $180
4. ICD Link SCSI Host Adapter Offer Received
5. Indus GTS-100 3.5" DD Disk Drive $ 50
6. Golden Image hand scanner w/scanning tray $ 50
and Touch Up 2.5
7. ST Replay sampling cartridge with DMJ-Soft's Offer Received
Sound Lab 1.1 (registered)
8. SupraFAXModem 14.4 w/Caller ID $ 55
9. Microsoft Mouse II bus version with $ 50
bus mouse adapter (use any PC bus device
device as an Atari mouse w/o driver software!)
10. Appoint Serial mouse pen with serial $ 25
driver software

Will also consider trading pieces of approximately equal value for a used Atari Jaquar game system with some games; if interested, e-mail for details.

Please send offers to mparrott@kendaco.telebyte.net or call Mike at (360)830-2277. Thanks!

>>This GREAT INVENTION is: an electronic box which gives users
>>FREE LONG DISTANCE TELEPHONE CALLS to any country in the
>>world and between cities within your country.

My take on it: It's either an out-and-out scam and attempt to
defraud, or it's a "blue box" which is illegal everywhere. Either
way, your best bet is to send it with full and complete headers to
abuse@dmon.co.uk (since thath's where you got it) and to
enws.admin.net-abuse.email, asking the world's sysadmins to take
appropriate action. It appears to be coming from a US domain, so most
likely can be prosecuted by the US Attorney in the originating domain.

Whatever you do, DON'T email these spammers! All that does is give
them a verified email address to sell to /other/ spammers. In my
experience, the ones that claim they will "remove" you are lying.
Even if they aren't - WHY should you have to ask them to stop breaking
the law?

3718. Atari Computer Goods For Sale! Free Catalogs Too!

Newsgroup: comp.sys.atari.st
Date: 1996-11-30 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <57papl$bf8@nadine.teleport.com>
Source record: 132930
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for
Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST
HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may
find something you've been looking. At BSC's Web Page you'll View, and
DownLoad Catalogs or Contact BSC by Web Page! Or Request Catalogs by
E-Mail. Have problems connecting with BSC's web page? Why not DownLoad
FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to
Request catalogs through E-Mail. Really, it's no inconvenience. All I
ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send
them to you by E-Mail Only. I'll get back to you after the weekend.
Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please
Direct any and all Replies Through E-Mail to bensmith@teleport.com.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974.
DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at
www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received
Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

3719. Re: conversion from PC to Atari disks

Source record: 132931

>Hello,
> I am trying to get an Atari ST working for some research. We have found a
>few of the machines with a system boot disk. I want to down load some
>software from the net, using a PC and then put it onto an Atari disk.
> Could anyone please tell me how I can manage this?

Format the disk to 720k on the PC; since the ST probably has either
512k or 1 meg of RAM, it will most likely be faster to use the PC to
unzip the archives also. The file system is the same as MS-DOS, so
file sharing is perfectly easy. Win95 long filenames, however, are
not understood, so be sure to use the DOS 8.3 system for the ST disks.

"Ambassador ," asked Steven. "Do you really want to know what's going on down there right now?"
"Yes, absolutely," replied dwilga@mtholyoke.edu.
Steven moved forward, and whispered something.
d> Organization: Mount Holyoke College

d> Furthermore, until last year, I had always assumed that if a program
d> makes a Malloc() call to ask for a block of X bytes and there is a
d> block (smaller than the largest block) of X bytes available, Malloc()
d> would use that block. As it turns out, it's just not so! Atari's
d> GEMDOS always chops up the largest block of RAM under all TOS versions,
d> even if you're only asking for 4 bytes! It certainly does increase
d> memory fragmentation when multitasking, too.

hmm, TOS does have a lot of bugs doesn't it?

d> Perhaps they fixed this for MagiC, I haven't tested.

I think so, I wrote a program that allocated a block of memory and paused. I then ran GenST to fragment my programs memory. My prog then allocated another block and paused again. I then quit GenST which left a free between my two blocks of memory. MY program then alloced another block which was between Block 1 and Block 2, ie in the memory where GENST had been.

"Ambassador ," asked Steven. "Do you really want to know what's going on down there right now?"
"Yes, absolutely," replied guy@swampdog.demon.co.uk.
Steven moved forward, and whispered something.
g>

>> I don't know how "clever" TOS is, but if a program requests a block,
>> and there is a block of fragmented memory thats big enough, wouldn't
>> that block be used?
g>
g> Yes.

And so does MagiC. I wrote a number of test programs. One Malloced two blocks of memory and printed there adressses and then paused. I then ran Devpac 2 (could have been anything) and then the program alloced another block then paused. I then quit Devpac and alloc another block which used the memory inbetween blocks two and three ie the fragmented memory.

I think the problem may come from the fact that most C compilers have a function that allocates memory in Bigger blocks so as to overcome TOS's 40-folder bug.

However a new program will always be loaded into the largest possible free block, even under TOS.

>> I never had any problems with Freedom 1.15 when I was using MagiC 4,
>> but the MagiC fileselector was crap! When running some applications
>> in single-mode, the fileselector almost always turned up blank. No
>> files was shown, and nothing could be selected.
g>
g> I bet all the memory was grabbed by the singlemode program. I have
g> found that programs requiring singletasking are invariably those
g> that hog all the memory as well.

It does.

g> There are also supposedly "multitasking friendly" ones which
g> initially hog all the memory then hand it back. In many respects these
g> are worse! Fragmentation here is a positive bonus. :-)

Which does that?

See you earlier,

Steven

You should use SED 5.68 to format your drive, and then install CBHD -
somewhere in the documentation to CBDH it says, that CBHDCONF.APP is a
very "basic" program at this stage.

>That is.... I've managed to reformat the drive and use it now, but I don't

>G 89.178 102.318

>So what on earth is going on?

sounds to me like a different sector/cluster size on the two HD's. I
have the same when I copy ~30Mbyte of small files from my 128Mbyte
partition on the Fireball 1280 to my Quantum LPS105 - they reach that
drive as 17Mbyte. The sector/cluster size on the 128 MByte drive is
2048/4096 and on my other drive just 512/1024. Since files accupy at
least a cluster - independent of their size - maybe that is your
trouble.

It's not just you Guy! I had THREE copies of the bloody thing this morning :(

I was wondering also, who we should complain to?

I don't mind (too much) the odd junk email, but THREE copies really pissed me
off!!

I must say though that I didn't even bother reading it (after the first
couple of lines) :)

Can we complain to someone so that whoever posted this is reprimanded?

3730. Help!!! (still having harddisk problems)..

Newsgroup: comp.sys.atari.st
Date: 1996-11-30 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <329fc2ceb5f251@sn.no>
Source record: 132998

Well, as the subject says- my harddisk problems haven't been resolved yet.
They all started when I tried to install the CBHD harddisk driver using the
"CBHDCONF.APP" configuration program, and it's obviously messed up the
bootsectors of my harddisks :-(

I managed to erase *everything* including that messy bootsector using an
Apple Macintosh and low-level formatting it (as well high-level formatting
it and using it with no problems on the Mac), but I just couldn't keep my
hands off my Atari and try it again, and here I am once more with a messy
bootsector.

That is.... I've managed to reformat the drive and use it now, but I don't
really trust it (especially since the "in use" LED blinks is a peculiar
fashion like it did when I had CBHD installed, unlike it did before with
ICD's software).

There's also another (more serious) problem- perhaps related to all of
this.
Fortunately I have another harddisk- an old 5.25" Hewlett Packard SCSI
drive which I now use as a backup for my Quantum Lightning 540S drive.
The funny thing is that when I copy the files over from the Quantum to the
HP drive some partitions show up as bigger on the HP drive!!!!???!!!
Example (in Megabytes):

```
Partition Quantum drive HP drive
----------------------------------------
C 6.806 6.806
D 194.281 262.242
E MiNT partition (empty for now)
F 32.362 37.912
G 89.178 102.318
```

So what on earth is going on?
Unfortunately I don't have any access to the Apple Mac now, or else I would
reformat both drives in turn on it and start from scratch again, but it
seems that I have to rely on Atari ST software- anything that allows me to
take low-level formats and/or erase the bootsector of the harddisk?
I just want to erase all the messy stuff that apparently is causing all
this trouble once and for all. Can anyone help?

oh... my setup:
Atari 520STe -4Mbytes RAM, TOS 2.06
ICD Link II (SCSI host adaptor)

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site
----
atari@atari.archive.umich.edu atari.archive.umich.edu
mail-server@ftp.tu-clausthal.de ftp.tu-clausthal.de
mail-server@cs.tu-berlin.de ftp.cs.tu-berlin.de
archive-server@Germany.eu.net ftp.germany.eu.net
ftpmail@ftp.uni-stuttgart.de ftp.uni-stuttgart.de
ftp-mailer@ftp.informatik.tu-muenchen.de ftp.informatik.tu-muenchen.de
archive-server@micros.hensa.ac.uk micros.hensa.ac.uk
mailserver@leo.org ftp.leo.org

___

is likely to be more or less the same.

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
======================================

What to type What it does
----
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
----
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
----

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
----
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
----

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
----
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

___

```
cd /directory/ (i.e: cd/pub/atari/) [MOVE TO DESIRED DIRECTORY]
bin [SET TRANSFER MODE TO BINARY]
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:
---------------------------------------
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
---------------------------------------

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

\_\_\_
```

```
150 Opening BINARY mode data connection for snip.zip (17852 bytes).
##########################################
226 Transfer complete.
ftp>
---------------------------------------
```

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

```
Example:
---------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
####################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##########################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
########################################
226 Transfer complete.
ftp>
---------------------------------------
```

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which
start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single
command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this
file or not, you can use the command 'prompt'. FTP will then proceed to get all
the files that match your wildcard without asking if you want them.

```
Example:
---------------------------------------
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
---------------------------------------
```

_____

[4] Ending your FTP session
----
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]

Example:
----
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
----

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
----
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
----

* When doing a 'close' and re-entering a new FTP site you won't have to set
up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then
restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
===
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
=============================
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro

```
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
```

```
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

_/_/_/
```

```
mdir [SHOW DISK DIRECTORY/FREE SPACE]
fdformat -l -d [FORMAT 720K DISK- MSDOS]

Are you sure, that you have got the correct cab.ovl 1.20h? I've had the
same problem like you before getting this new ovl-version!

Andi

Have you set the email options correctly in the SERVER/PROXY settings
in CAB?
steve

> No, I don't have HSmodem installed because the instructions are
>utterly incomprehensible.

That's true, but all you need do are copy (in this order) DRVIN.PRG and
SCC.PRG into your AUTO folder.

>...after installing the newest version, CAB tells me "read error on file /"
>no path, no filename, nothing! This is so frustrating!!!)

Find your WWWCACHE folder and look at the contents; there should be a
zero-length file named something like CABCACHE.xxx - if it's missing, start
CAB while you are off-line, pull down the config menu, make sure your cache
path is set properly, save the prefs, and then clear the cache. Exit and
restart.

>Following up my own message, I actually managed to get STiK to dial
>after hours of troubleshooting. Seems the modem was not responding
>to the init string under the normal entry in the STiK setup.

Sounds like an older version of STiK.

HSmodem will fix the port speed problem, BTW.

>I connect, it makes zero difference if I have the correct
>user name and password entered. I can enter complete garbage and it still
>thinks I am making a good connection. The script seems to be correct, it is
>the same one that works on my Newton (which also gave me fewer problems,
>believe it or not!). 3) Nothing works, not CAB, not AntMail, not nuttin'.

Is your account plain, uncompressed SLIP? PPP won't work, and neither will
CSLIP; the VJ flag must be set OFF by your ISP.

(Re: gateway address)
>How can STiK possibly work at all without this setting???

I've set STiK up for at least 4 local ISPs and never needed a gateway
address - thought it was only needed for email, actually, and have never
bothered with it except when using a direct NOS connection.

>Any help would be useful.
>
>a) how do I get more than 19,200? I downloaded hsmodem, but the
>instructions are unusable. (running it seems to do nothing)

See install instructions above; be sure you set your port to MODEM2 or
SERIAL2 rather than AUX or MODEM1 since that is limited by the BIOS to
19200.

>b) has anyone gotten STiK to work with TIAC? if not, why? if so, how?
>
>c) Has anyone gotten Netcom and STiK to work together? how?

I don't beleive Netcom offers SLIP.

>d) Anyone got a handy login script for a decent nation-wide ISP you could
>post???

You can have decent, or you can have nation-wide. I am blissfully unaware
of an ISP who is both.

>e) Why am I up so late?

Too much coffee?

>Thanks in advance. Oh, I'm on a 14mb Falcon (clabs) with
>a 33.6 modem and all non-essential auto programs off (fspatch seems
>necessary, STiK also won't dial my modem without this installed).
>
>This is really bugging me, do you get that impression???

Had no idea. ;^)

Don't know what the problem you guys are having is,,,stik works
perfectly here in Australia. If you email me I will send you a dial
script that works perfectly.

> ICD Link II (SCSI host adaptor)

Hello Hallvard,

You might try Supra's formatter. I have v4.03 which was supported until 1990.
Supra may be "Old Stuff", but it still works very well on some of my older
HD's that CBHD can't handle. It's a bit slower than some, but can format over
just about any other formatter with no problems :) It may just work for you
too !!!

Hi Guy,

I got this mail too and read it through... just to get to the `send me this much bit'. The wording is designed to appeal to less intelligent types, but is itself poorly written. Constant repetition etc. Forget it or report it to the FED's in the US. It stinks! Something for nothing but pay me first... Hah!

Just my opinion,

Ali.

Message-ID: <57pf22$7fg@ssbunews.ih.lucent.com>
Source record: 133006

Spam deleted -
to complain, start by posting to root@, postmaster@ and sysadmin@ the location the original mail was sent from. Include a copy of the spam for them to use in chasing the perpetrator. Most responsive sites will do something about it. The person could be posting from his own machine on the network, in which case you want to post to his supplier and they will take care of the matter. The supplier is usually one link up from the originator in the chain of "received from's". Wayne

PS- What they are selling might be nothing more than a microphone and software for your pc box that allows you to use "net-phone" or it could be a blue, black, etc box - which in many countries are illegal (these are boxes that generate the tones used by the phone system and being caught with one of these is usually a hefty crime. From the ad you can't really tell what they are offering.

Looking at the Mgftp103 program in an editor, it appears that it is
expecting to find it's files in a folder names D:\SPRACHEN....

Mgftp102 will attach to a FTP site, scan directories, but if you
try and select a file to transfer, it ignores the selection and
transfers the first file in the directory.

3740. Free MIDI software

Newsgroup: comp.sys.atari.st
Date: 1996-11-30 00:00:00 UTC
From: Rolf Nilsson / RONI MUSIC <roni@mbox317.swipnet.se>
Message-ID: <32A083C5.6D08@mbox317.swipnet.se>
Source record: 133008

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Sweet Sixteen is a comprehensive and powerful MIDI sequencer for
PC/Windows and
Atari ST/STE range of computers.
Sweet Sixteen offers Piano Roll, List and Transform edit pages as well
as a
dedicated Mixer page you can use for your favourite synthesizer.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

3742. FS: Falcon 030, ST Capable Multisync Monitor, and Books!

Newsgroup: comp.sys.atari.st
Date: 1996-11-30 00:00:00 UTC
From: kendall@rmii.com
Message-ID: <57q5s6$4dv@natasha.rmii.com>
Source record: 133010

For Sale:

Falcon030 4/80 and software! - $500
14" Princeton Ultra 1400 Multisync monitor (w/ST cable) - $200
ST programming books, see below and make me an offer I can't refuse.

Or buy both computer AND monitor for $600!

All prices include S/H (except the books unless sold with something
else...)

Falcon 030 details:

Hardware Includes:
16MZ 68030 (sorry, not 32MHz)
4MB RAM (standard)
80 MB internal HD (standard)
Screenblaster hardware/software
Atari RGB color monitor adapter
VGA montor adapter
Unused RAM Gizmo with docs, original box, original styrofoam peanuts!
All original docs/software - some original disks, but not quite all.
Unopened case
Lightly used

Software, docs and original disks:
Productivity
Straight Fax 2.0.
Registered Connect, best terminal program ever made.
Registered Superboot 8.0 (nothing extra, but hey!)
Old Photo Show program for Kodak Photo-CD's
Diamond Edge hard disk repair software
Atari Works (came with computer)

Games (ST games, most work on Falcon)
Falcon flight simulator, with mission disks counterstrike & firefight
Battletech
Powermonger
Oids
Microprose Civilization (runs with compatability programs on Falcon)

This machine was used for about a year, thn I had to get another machine
for work related stuff (one guess what kind). Sadly, I no longer use it,
and could use the money. Hopefully it will go to a good home, and someone
else can squeeze a few more years of valuable service out of it.

Monitor details:

Princeton Ultra 1400 Multisync montior - first used on my STE for high
and low resolutions, this montitor is about 2-4 years old, again with
light use (no use at all in the last year). It worked very well for my
STE, and went up to something like 800x600 on my Falcon. I'll even throw
in the Monitor Master box that allows you to hook up an ST to the monitor,
and switch between high & low res (not on the fly!)

Books:
The Atari Compedium, still has registration card.
Atari ST Applications Programming (Bantam)

Abacus:
GEM Programmers Reference
Atari ST Internals
Atari ST Machine Language
Compute:
ST Applications guide - programming in C
Tech. Ref Guide, vol. 1 - VDI
Tech. Ref Guide, vol. 2 - AES
Learning C programming graphics on the Amiga and Atari ST
Compute's second book of Atari ST.

I'd rather like to sell the books as a set, but if there's one you're
just dying for (the compendium), feel free to ask!

In general, I'd like to sell all of the computer stuff togenter, but if you
are interested in any one piece just ask me and I'll consider it.

Happy New Year to everybody!

From: Paul.Muehlbauer@flight.org
Message-ID: <a2b_9611301528@flight.org>
Source record: 133011

"B> I am trying to get an Atari ST working for some research. We
"B> have found a few of the machines with a system boot disk. I
"B> want to down load some software from the net, using a PC and
"B> then put it onto an Atari disk. Could anyone please tell me
"B> how I can manage this?

These sound like the oldest 520s with TOS on a disk??? The disk drives & formats are compatible, but they use 360k single sided single density format. You'll have to coax your PC into formatting a disk at this density. If you format a disk with an Atari this old, it will not write a few bits into the header the way the PC expects it, so the PC will not think the disk is formated. There are ST utilities to correct this, but you'll have to format a low-density disk on your PC to start with, to get the utilities...

If you haven't written any more files on that disk, then you can use an
undelete program to try to retrieve it.

Else contact that church who makes the program. Should work I think :)

The only one I've found is it can only run on the root and not from a folder. Will experiment with Psgyham and Divert to get around this though.

Other than that, works fine for me...soon as I register I'm ditching all my other Tetris games as this has them all :)

3748. German-only software: why? views on this anyone?

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: RCain@nest.demon.co.uk
Message-ID: <579_RCain@nest.demon.co.uk>
Source record: 132866

Hi hallvart@sn.no, on 01 Dec 96 you wrote:

h> A software-author would reach a much bigger crowd with at least
h> having their software in English (as more people understand English
h> than say German in the world).

But the German ST community is very large in itself and also contains most of the best programmers (no flames, please). The have no real NEED to expand their market. I'm sure English is just as difficult for some Germans as German is to you, Hallvart.

h> I've come across several great packages on the net (they definitely
h> looked impressive), but as the menues/docs have been in German, French
h> or whatever they've been too hard to understand, thus giving up the
h> package completely.
h> Anyway, does anyone else here have views on this subject?

Hmm ... the easiest way is for you to learn enough German/French to understand what is going on and buy a dictionary!

Otherwise we need some kind bi-lingual souls to do the translations for us (with the programmer's permission). I don't think it right that the programmer should have to do the translations - he is FAR better occupied doing what he knows best!

In the UK Joe Connor provides such a service and translates,releases and supports worthwhile shareware. Of course, there is only so much one guy can do so we can't expect him to respond rapidly to each and every non-english release.

There is also an organisation (known as ASSI, I think, and based in Sweden) which does something similar.

There are enough of us about who understand sufficient of a foreign language and sufficient about programming and software jargon to be able to do this job. The problem is co-ordinating the effort and releasing the results. I once struggled through some docs. on a TeX implementation (German, naturlich!) and managed to squeeze them onto the release floppies of a PD agency. It's not always as easy as this, though.

3753. Re: STiK (& Forms)

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <32A1F7C7.768@facstaff.wisc.edu>
Source record: 132871

Harry et.al.,

(Preface: I'm generally really pleased with STiK, CAB, Antmail and NEWSie, so the below is an expression of perplexity not a rant!)

I've also had a great deal of trouble with CAB/StiK and Forms. While most of the general search engines seem to work fine (Webcrawler, AltaVista, Yahoo, e.g.), more complicated forms seem to generate a variety of problems (though not the 2 bombs you describe). These range from only transmitting some filled-in fields on a multi-part form (www.switchboard.com never seems to get the first-name field and yields all persons of the entered surname) to having some fields of a multi-part form not even appear for the user to fill in (the Tripquest page at www.mapquest.com)
to forms that appear to have been filled out and sent in normally but which result in a reposting of the original page rather than any result. And then there are forms that use SSL-mode for secure transmissions (pctravel.com, for example), which is probably another kettle of fish.

All I can figure out on my own is that it appears that forms that use the HTML "GET" command to submit the form seem to work OK, while the problems occur with forms that use the "POST" command, which unfortunately for us is the currently recommended command for HTML writers. I've heard that this may be a problem with CAB.OVL, but who knows?

Also, some CGI scripts used with Forms are interpreted by CAB/STiK as binary files which it asks me to save to disk...not too helpful.

Have others had better success with forms? There are more and more of them out there!! I'm interested in hearing others' findings with the same sites or others.

By the way, my system is: 512STM, 2.5megs RAM, ADSCSI host adapter, Syquest EZ135, Supra 9600 baud modem (I now have DRVIN.PRG & MFP.PRG from HSMODEM7 installed in the auto folder, but have no idea whether they do anything or not...all the internet programs work the same as previously, no better/no worse), TOS 1.04, CAB1.5, STiK1.12, CAB.OVL 1.18 (are most people having better luck with CAB.OVL 1.20h now??)

Harry Sideras wrote:

It is totally clear that a bigger company like Apple can sell their
computers for lower prices than Medusa Systems could do it.
Question is, wether we want a few BIG companies telling us what
to use, or many smaller and bigger companies asking us to buy their
stuff...

3756. TOS 4.92 (again)

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: paz@wile.demon.co.uk
Message-ID: <849563308_OASIS_@wile.demon.co.uk>
Source record: 132874

HI all,

There was a thread around here recently regarding running TOS 4.92 from drive C.
I've recently upgraded my Falc to 14 megs RAM and would like to know if anyone
managed to get TOS 4.92 to run from hard drive succesfully.

I tried it, but the best I got was getting the TOS and auto programs to boot
OK from the hard drive, but none of my accessories got loaded.

Anyone had better luck ?
Any help, as ever, much appreciated.

Thanks,
See Ya,
Paz.

In uno strano messaggio del 01 Dec 96 hallvart@sn.no (2:333/608.1) scrisse
al povero All :
h> -copy "cbhd.prg" over to the boot-partition (usually C)
h> -rename "cbhd.prg" to "shdriver.sys"
h> -reboot, and the bootsector boots the drive with "cbhd", thinking it's
h> shdriver.sys"!

Maybe it works also if named cbhd.sys, I did it this way when upgrading from
SCSItools/Hushy and is still working fine

h> There's also a program called "scsidrv.prg" that comes with the CBHD
h> 4.57 package. I don't know what it does, but I've run it every time prior
h> to starting the configuration program- seems like it initializes the SCSI
h> or something... does anyone know what it's for exactly?

Seems to be a limited version of the SCSI driver, supporting SCSI commands,
no ACSI or other I think.

Hi Ben,

By the look of the specs it seems the DirectT and Hades computers are
funtionally identical. The Medusa is an older design which only uses
the 040 but has a standrad ST I/O board which the Hades and DirecT
lack at this time.

Hi,
I have a Plextor Quad Plex SCSI and it records from
CD to harddisk well with ExtenDos Pro.

Mike

It's also possible to run CAB with a virtual screen in low rez. For
this you can use BigScreen V1.22 (BIGSC122.LZH) right after NVDI.PRG
in the auto folder. Workes very nicely in 640*400*16 on a MSTe and TV.

I did a rather stupid thing. I was plugging my SCSI cable in and out while my external SCSI was still running. Now it doesn't boot at all, nor does AHDI recognise that there even IS a SCSI device attached. Could I have fried my SCSI chip? Could I have corrupted the boot sector? I remember when I first got my drive, I needed Diamond Edge (I think it was, on loan from the distributor) to partition and format the drive. What other programs (hopefully, something I can get from an FTP site) will help me reformat the drive? (If that is indeed the problem.) Alternatively, how can I tell if my SCSI chip is fried?

Yours hopefully

That's a problem of your Plextor Device and your Driver.
Use Toshiba Drives and the CD-Tools.

(That's the one an only with an nice Audio transfer via SCSI i think so)

First try cleaning the heads with one of those cheap little non-abrasive
head-cleaning kits. If that fails, you'll probably have to replace the
drive.

>Is there a programm to convert Sample.AVR to Sample.WAV ???

I think 525 does that, and I know SoundLab does.

: > included there?.

I've got the directors cut and am not sure about the 'lesser' version, but in the directors cut the scene is the one where Deckard (Harrison Ford) chases the replicant Zhora after she polaxes him in the niteclub artists' changing room. There is a shot of a shop front as he searches for her along the street, and the shop is selling -you guessed it!!- Atari. The next shot is shortly afterwards where Deckard hesitates as he climbs down from a small step. As he begins to move away you can see the Atari logo filling the backdrop.

I purchased a Pro-Logic system just to enjoy watching the Atari logo in Blade Runner and Terminator 2 BTW!!! :)

From: hallvart@sn.no
Message-ID: <32a1051612055b5@sn.no>
Source record: 132938

After a lot of aggrevation and wasted time I've finally figured out (I think) how a certain CBHD harddisk driver configuration program should be used.

The text and docs were naturally in German only, and very technical German as well which made me even more confused....
So, I'm wondering what the use is to make German-only software?
Isn't the Atari platform small enough as it is, if not to limit software to only people speaking German?
A software-author would reach a much bigger crowd with at least having their software in English (as more people understand English than say German in the world).

It's not really that hard to traslate the window-menues into English as well, is it? (I've played around with "Otto's resource Construction Set" a bit on my own, translating/changing menues just for fun- and I'm not programmer)- it was pretty easy!

I would think that the docs was the most time consuming part to translate, but with good menues, documentation wouldn't be that important (perhaps a simple "readme" would suffice, listing up the most important points).

I've come across several great packages on the net (they definitely looked impressive), but as the menues/docs have been in German, French or whatever they've been too hard to understand, thus giving up the package completely.

Anyway, does anyone else here have views on this subject?

3774. CBHD(conf) problems- solution/cause found (?!!?)

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32a105121201ff3@sn.no>
Source record: 132939

As some of you migh recall I've been having major harddisk problems lately.

They all began after trying to install a new harddisk driver since my existing ICD driver (that came with my "Link II" unit) wouldn't work with MiNT/MinioFS which I was curious to try out.

So I tried to switch over to the CBHD 4.57 driver by Claus Brod.
For those of you who have tried it you've probably noticed that the text is all in German- both the program itself and the docs, and the stuff in there is quite technical as well, so it's pretty easy to get confused- that's what I did!

I knew that I had to install the driver first, so that data is written to the boot-sector to call upon the driver, so I went to the "installieren" menu....

From selecting it I got something like this:

Quantum Lightning 540s pt.0
Quantum Lightning 540s pt.2
Quantum Lightning 540s pt.3

Now, anyone knowing a little bit of English would see "pt." as an abbreviation for "part", right?
That,s just what I did, so I selected all three "parts" one by one (not really understanding why part 1 was missing, but I guessed the programmer had a reason).

Upon booting I was presented with 4 bombs, following by a system freeze!!
This happened every single time. The "in use" LED also flashed in a peculiar way unlike before.

Anyway, I think I've found out what I've done wrong!!
The "pt.0, 2 and 3" are *partitions* 0, 2, 3!!!!!!!!!!
In my opinion a very unwise way to put it.
I would have written something like:

Quantum Lightning 540s partition C
Quantum Lightning 540s partition E
Quantum Lightning 540s partition F

(or just the "C", "D", "F" if space-saving was needed).

Understanding this I tried to install the driver again on my backup drive, this time just installing it on "pt.0" (partition C) and it worked!
But I found another problem with the CBHD configuration program- there's no "remove driver" option there. I did detect an "entfernen" menu there, but it was grayed out and therefore unusable.

If anyone reading this want to use the CBHD driver, install it this way as Claus Brod (the author of CBHD itself) told me to:

-install Atari's own AHDI driver the usual way
-rename "shdriver.sys" (Atari's harddisk driver from AHDI) if you want to keep it as a backup, or delete it.
-copy "cbhd.prg" over to the boot-partition (usually C)
-rename "cbhd.prg" to "shdriver.sys"
-reboot, and the bootsector boots the drive with "cbhd", thinking it's shdriver.sys"!

As for configuring the driver, just use "cbhdconf.app" and load "shdriver.sys", even though "cbhd.sys" is asked for in the file-selector. You can do this in case you want to edit the various parameters.

There's also a program called "scsidrv.prg" that comes with the CBHD 4.57 package. I don't know what it does, but I've run it every time prior to starting the configuration program- seems like it initializes the SCSI or something... does anyone know what it's for exactly?

And Steffen Engel (author of "CBHDCONF.APP")- if you're reading this, please take the things I've mentioned into consideration for the next update of your program so we don't have to have all these problems. It's definitely caused me a lot of grief and trouble!
It would also help to at least include an English .RSC file with it so that a broader audience could use and understand it.
The Atari community is small enough without having to limit it to just one language group!
I'll even volunteer to help translate!

Hello, All

Just a little tip for HD problems. If you get stuck in a boot-up crash loop just wait, when rebooting starts, for the floppy disk light to come on and then go off again, as soon as it goes off press the Alternate key and hold it down until a second or so after the floppy drive light comes back on again. This will force your machine to boot from the floppy disk and hopefully allow you to get round that dodgy HD .prg or .acc.
Works on my TOS 1.62 STE so I presume it will on later machines too, don't know about earlier TOS's though, try it and see.
If you keep a floppy with your driver software and boot-up Desktop.inf on it you can get straight into the HD without having to re-install drives, etc.

w> the net? If anyone has done so, I would like to hear from you!

I did it on my STE, others in here have too, hello Bruno :) Personally
I wouldn't recommend it. There is (at present) no way to read e-mail
offline except by using a terminal program or Telnet to log-in to their
old and unfriendly online service. Even then you have to make sure you're
using the old mail system and not the new one. News works, but I found
their servers to be slow and prone to irritatingly long and costly pauses
whilst online, also most of the articles were at least 2 days old, often
a lot more.
When you add in their expensive prices you'll find they compare very
unfavourably with the likes of Demon or Zetnet, or virtually any other ISP
that charges a flat fee for unlimited use. 6.50 may seem cheap but that's
only for the first 5 hours, it's 2 quid per hour after that and, believe
me, that soon goes on the Internet.
So that's a big thumbs down from this ex-Compuserver, others might
disagree but I can only tell you my experience and leave the decision,
to stay or go elsewhere, to you.

That's the one I've been using until recently - along with the built-in file selector. I missed the auto-locator too much so now I've finally switched over to Selectric. I still miss the greater ease of use of UIS though.

PM> I don't know, but guess that this is what the guy is talking about in
PM> the above. To me it is not that your file selector is bad (I've never
PM> tried it :) but it just isn't the standard I have used for seven years.

No. When it's impossible to change a file mask in a file selector or to do any moves, copies, renames, file-finding etc it becomes a case of it being completely inadequate.

N> look at?

My version of STiK is 62961bytes - dated 18/11/96. Is mine older or newer?

N> The site could also have just been very slow.. try pressing control k a
N> few times to see if this kicks it into action when it stops.

What does Control-K do? I've never heard of that one...

Also, I'm getting two-bomb crashes every time I try to submit forms. Any
idea why? What might I have forgotten to set up (I haven't checked mysetup
for a long while now...)

That sounds a fair statement.

When you talk about the design, so you mean of the hardware memory management
or the OS? If the latter, isn't it a relevant issue to get this addressed or
are we still in the realms of getting the whole system to work at all?

This is where the work seems to need to be done.

Hi Steven, on 27 Nov 96 you wrote: ...respect, brethren

s>
s> I'm looking to upgrade a Falcon from 4MB RAM to 14MB RAM.
s> I've just had a look at the Systems Solutions web site and it appears
s> that this will cost about 700 quid!
s>
s> Is there a cheaper way?

IIRC Titan Designs do a memory board that takes 72-pin SIMMs for 149.95ukp
include the RAM itself - 72-pin 16Mb 60ns non-EDO.

Your existing board is likely to take the slower 4*4Mb 30-pin SIMMs

j> that block be used?

Yes. But if the largest block isn't big enough but the total unused is (ie
two blocks of 1100k and 800k to load Papyrus into) then the second block is
as good as lost.

j> I don't think this problem is that serious. I'm now running

j> 7792K free in 28 blocks, and the largest block is 7689K. This means
j> that I have lost 103K the last four hours.

Sure - that wouldn't be a problem. But with 1900k free here I can lose 800k
just by starting and closing one application - that's too much. Is it a
consequence of the OS or of the inferior MMU in a 68k machine? Doesn't anyone
know?

3787. New problems with STIK

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: glennm@mail2.sas.upenn.edu
Message-ID: <57s6b3$k78@netnews.upenn.edu>
Source record: 132952

Hi all,

Well, I am still fighting with STIK. I figured out how to get
STIK to find it it's cnf files, and I gave up (for now) any autologon. I
am dialing up manually, then switching to STIK. Problem is now that I
have to set my IP address. When I go to type in my IP address STIK tells
me it's an invalid IP address! I am tried it 2 ways, "128.91.200.24" and
"128.91.200.24." without quotes, with and without the trailing period.
Also, when I enter it, I can't see what I type, and the cursor starts out
in the middle of the dialog thingie (thingie-my favorate tech talk!!!)
Anyone have any suggestions? Also, for the DNS option, the provider
recomends putting in 3 DNS address's. Can I do this in STIK?

Thanks,
Richard

3789. Parting out TT030 system - Update

Newsgroup: comp.sys.atari.st
Date: 1996-12-01 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <57sa0v$ngg@kendaco.telebyte.com>
Source record: 132954

Parting out my entire Atari TT030 System! Details below:

- TT030 comes with (a whole bunch of) software; e-mail to request a list!

- Prices include shipping in continental U.S.; buyer is responsible for
COD charges.

- Important point: I _must_ have a buyer for all items before sales are
considered final and any items are shipped! Offers will be accepted only
on the understanding that they might be cancelled unless everything goes.
I'll wait about 2-3 weeks for this to happen. Items for which offers have
already been received will be so marked, so everyone will know the status.
Here's what's up for sale:

1. Atari TT030 with TOS 3.06, revision "H" $875 (_low_ offer
motherboard, 4 Mb ST RAM, 16 Mb TT RAM, received,
HD floppy, 290 Mb internal Maxtor HD, not yet
48 MHz CaTTamaran accelerator accepted)
2. CTX CMS-1561 15" multiscan color monitor $250
3. Quantum 345 Mb HD w/case & power supply $180
4. ICD Link SCSI Host Adapter Offer accepted
5. Indus GTS-100 3.5" DD Disk Drive $ 50
6. Golden Image hand scanner w/scanning tray $ 50
and Touch Up 2.5
7. ST Replay sampling cartridge with DMJ-Soft's Offer accepted
Sound Lab 1.1 (registered)
8. SupraFAXModem 14.4 w/Caller ID $ 55
9. Microsoft Mouse II bus version with Offer accepted
bus mouse adapter (use any PC bus device
device as an Atari mouse w/o driver software!)
10. Appoint Serial mouse pen with serial $ 25
driver software

Please send offers to mparrott@kendaco.telebyte.net or call Mike at
(360)830-2277. Thanks!

There's no correlation between the number of free blocks and the memory loss.
Are all the memory blocks of the same size? How would I know? There is no
guidance whatsoever as to what any of it means. As such it is worse than
useless. It is totally meaningless. Why is this hard to see?

>> If the problem isn't associated with MagiC or MagxDesk, why is it

I can guess this much.

g> If you terminate (b) then you should end up with the full 1Mb again.

This is what's failing, but there's no adequate reason for it to be so, from
what I understand of the process.

>> a> APPLICAT frees all memory it uses.

Sure. But the program is an integral part of MagiC. How can it be permitted
that this program exhibits this behaviour?

>> a> There is only the fragmentation problem.

g> each other with nothing used inbetween.

This is a fine description of what ought to happen. However, it doesn't. It is a good description of the bug that I'm reporting. If you had Magic 4 or 5 you would see that.

The memory in subsequent free blocks isn't available and doesn't become available when other programs are closed down. As I said earlier, sometimes just closing a desktop window is sufficient to make the fragmented block available again. Again, this is MagiC/MagxDesk's responsibility. There should be a way for the situation to be recognised and dealt with - this is a priority if the OS is being sold topeople with Atari machines with a limited amount of memory (4Mb).

> than say German in the world).

Maybe in the world, but my guess is that the mayority of Atari users speak German, especially if you only count Atari users with a harddisk. It would be nice to have both a german as an english version of software, but how many (english speaking) authors will do german versions of their software? So why ask german authors to do the opposite? If you have the choice of making a german XOR an english version of a piece of software the choice for german will produce the most hapy people.

Yes, use "chkdisk3" by Atari. It's a free program available on most FTP sites. It's a harddisk program, but I think it'll work with floppy disks as well.
Good luck!

The CBHD kit is not JUST a HD driver. It also contains a comprehensive SCSI
interface which can be used by other applications. I think this interface
hooks into TRAP 7.

SCSIDRV is very much like CBHD in that installs the driver AND the interface.
CBHD0 just installs the interface.

The ICDFMT program has an option which allows you to "Write Partition Info
Only". This stuff goes in physical sector 0 so it ought to allow you to
correct any bad values which may be there without zeroing the FATs of any of
the partitions.

Unless the STs are VERY old the boot disc will not be much use to you (I wonder what's on it?). Any other than the early ST have their operating system in-built on ROM so they should boot up without a floppy. The only good reason for having a floppy loaded at boot-time is to stop the m/c searching for a floppy in drives A: to P:.

If you format a floppy on a PC to 720Kb (or 360Kb if the ST floppy is single sided) it is readable by the ST, Just download on the PC and copy onto such a prepared floppy.

I'm sure there's a good explanation. Danny's a trustworthy guy and handling registrations is not an easy thing as it may seem, but I must admit that waiting since April is a rather long time! ;-) Send a mail. I had to wait about as long for the STE version of Jeff Minter's Revenge of The Mutant Camels, because someone at Llamasoft was ill or something.

: impressive), but as the menues/docs have been in German, French or whatever
: they've been too hard to understand, thus giving up the package completely.

: Anyway, does anyone else here have views on this subject?

: Hallvard

I agree, Hallvard. I too have passed up some great looking packadges on
the net because of the language problems. But it's more than just the
lack of english docs, in my opinion, the German software programmers seem
to have a different way of writing software. Things are not always where
I expect them to be. I'm not knocking them, God knows they write some of
the best Atari software around! It's just without english docs, I can
never figure the things out. Germans seem to be more technical, and
their docs reflect this. When I DO get translations, I notice they go
into great detail about which Trap or BIOS call is doing what. Most of
the American docs are aimed at me- I need to know which "button" to push
to make something happen. Good example is HSMODEM. Tried it about 4
times over the last few years. Got so lost in the docs I couldn't make
sence of it. Had to use it with STIK, and saw a post that said just put
this here, and reboot. Did it, worked no problem. Just a different way
of thinking, I guess.

This is not totally right!
Win95 long file names can be used. There is two file names anyway.
The Atari would use the shorter 8.3 filename (like mydocu~1.doc)
or the long name if you have the VFAT file system on your ST.

Another thing is the UnZipping program.
I presume he would use PKzip or something like this.
For this runs under DOS (not Windows) it can only use 1 MB (or better:
640 KB) so the only speed difference comes from the (probably) faster
CPU in the PC.

Message-ID: <32A2FCF3.7651@lboro.ac.uk>
Source record: 132824

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months.
think about it. You see those 'Make.Money.Fast' posts more and more.
That's ... because it WORKS ! So I thought, all those new users might
make it work. And I decided to try it out, a few months ago. Besides,
whats $5.00, I spend more than that in the morning on my way to work on
coffee and cigs for the day. So I sent in my money and posted.
Everyone was calling it a scam, but there are SO many new users from
AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't
believe it! Not just a little, I mean big bucks! At first only a few
hundred dollars, then a week later, a couple of thousand, then BOOM. By
the end of the fourth week, I had recieved nearly $47,000.00. It came
from all over the world. And every bit of it perfectly legal and on the
up and up. I've been able to pay off all my bills and still had enough
left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus
Valppu says he made $57,883 in four weeks. Dave Manning claims he made
$53,664 in the same amount of time. Dan Shepstone says it was only
$17,000 for him. Do I know these folks? No, but when I read how they
say they did it, it made sense to me. Enough sense that I'm taking a
similar chance with $5 of my own bucks. Not a big chance, I admit--but
one with incredible potential, because $5 is all anyone ever invests in
this system. Period. That's all Markus, Dave, or Dan invested, yet
their $5 netted them tens of thousands of dollars each, in a safe,
legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate
pieces
of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In
this way, you're not just sending a dollar to someone; you're paying
for
a legitimate service.) Fold a $1 bill, money order, or bank note
inside
each paper, and mail them by standard U. S. Mail to the following five
addresses:

1- Victor Chen
2021 Hearst Ave
Berkeley, CA. 94709

2- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

3- Sean T. Stevenson
14933 Blackwood Lane
White Rock, BC
CANADA
V4B 2A8

4- Harald Ebbers
Groene Kruisstr. 63
6591 GH, Gennep
The Netherlands

5- Daniel Leavy
72 Valley Road
Loughborough
Leicestershire
LE11 3QA

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to
keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass

it along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent

the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

3810. Digital Camera

Newsgroup: comp.sys.atari.st
Date: 1996-12-02 00:00:00 UTC
From: pmonstad@sn.no
Message-ID: <32a306889c5901@sn.no>

>I've recently upgraded my Falc to 14 megs RAM and would like to know if anyone
>managed to get TOS 4.92 to run from hard drive succesfully.

Short answer: dont.

Instead of using TOS 4.92, use the AES 4.1 in the form of GEM.SYS as this is
a more recent version (yes, I know TOS 4.92 claims to have AES 4.1, but this
is not the same version - eg. iconify is implemented differently)

To install AES4.1 (gem.sys version) rename it to GEM.PRG and stick it in
the auto folder, along with GEM.SYS. I think it should be last, but I'm not
certain...

Or, if you are using it with MiNT (to make a more up-to-date version of
MultiTOS) just put GEM=somepath\gem.sys in MINT.CNF

At issue is the historical lack of consideration for virtual memory in the
OS. Just having a CPU capable of doing virtual memory is not enough.

Virtual memory works best when programs are designed with a knowledge that
a particular area might have to be swapped to disk. Time-critical things
like interrupt handlers need to be in static RAM, whereas things like
dialogs can be swapped freely.

Since there has never been this sort of design in TOS, adding it now would
only affect new programs. Older programs (which, let's face it, are the
majority) would still suffer from incompatibility or slow performance.

I agree with you at most point... BUT
In Germany companies who are still developing software for Atari
(mostly for MagiC and Multi-TOS) do their adverstising with
the argument their software was German, while most software for Windows
and Mac (not even mentioning OS/2) have really too many English
aspects for many Germans!

Although all Germans learn English at school it is no fun
to read a documentation half English half German or to play game
where the texts or the speech are changing every twenty seconds!
In word processors it is even more like this!

I presume the best would be to make TWO versions of the software,
but to stay on the German version as the leading one, simply because
there are more Atari and MagiC users in Germany that anywhere else
(at least more in one town...)!

I must admitt I have no problems in understanding software from Germany
or France, and I know the reasons the German companies have to sell
their software in German only (see previous postings). Anyway, I agree
that at least drivers should have a documentation in English, or better
in all three languages.
Is there no chance of finding someone who could translate the readme
files?
I must also admitt, that I don't know enough French to translate it, but I
could
try to translate German textfiles into English ones. Just send them to
me,
and I will try! It's also good for me, because I like reading textfiles,
really!
They are interisting in some aspects and it is always good
to know about Atari software!

But don't exspect perfect translations! I do speak English and German
because of
the place I live in, but I've never tried to really translate anything...
:-)

Ah! Hit escape to the flush the field (it's got zero's in it already)
then enter ...

128.91.200.24

.. or boot in low rez to do it - you should be able to see it then.
It's a minor visual bug which can be fixed with a resource editor if
you know how.

>Also, for the DNS option, the provider recomends putting in 3 DNS
>address's. Can I do this in STIK?

Erm, not sure about that. iirc, you can put in more than one but I
think only the first is used atm so make sure that one is the most
reliable/fastest.

I got it from Suzy Bee. You can custom order disks from them,or if you
have access to a CDROM, you can get their entire catalog at a reasonable
price from Toad.
Sebra is useful in certain circumstances, but of course there are
trade-offs involved. It's a bit fuzzy, and some software doesn't seem to
like it.

Perhaps your MSTE has a WD 1772-02-02 disk controller chip inside instead
of the "AJAX" controller chip which is made for HD (and ED) drives.
Most 1772-02-02 chips work with HD drives, although they're not made for
it- they might just stop working.. Maybe that's what's happened...

Nearly everything that will run on the STfm will also run on the STe - the
few that won't are older games that reply on "illegal" programming tricks
like direct jumps into the OS. Offhand, I can't think of a single program
that won't run on an STe that I simply can't live without.

Frankly, I don't recall. I think it was on the GEMini CD-ROM, though.

>I'd like to create some videos on my st... what would I need?

A video capture cartridge and the associated software. VIDI-ST is the one I
currently have; there are several others.

>: Also, if monochrome is good enough, you can use Vidi-ST To capture video
>: direct from a VCR or a TV With video out jacks.
>
>Does this mean the video would be black and white?

From the plain-jane VIDI-ST, yes. There's a hardware add-on that does
color, but IIRC it's for stills only.

Dunno why I didn't think of this before ...

Get the memory fragmented, run memexamn.ttp in the vt52 window (just
hit return when it asks for arguments) with a decent scrollback buffer
set so the window stays open when memexamn quits. Now scrollback, drag
the mouse over the lot and vt52 will save it to the clipboard.
Post it here and I'll examine it! :-)

I'm fairly sure (as much as a gut feeling can be) it might be the
desktop allocating a bit of memory just like my Ease does. If we can
find who and why we should be able to circumvent it.

> >> a> APPLICAT frees all memory it uses.

>permitted that this program exhibits this behaviour?

Well on the unproved assumption that it is, then it has to obtain
memory from somewhere. The alternative is to grab all the memory it
would need when it loads. This would result in even less memory. :-(

> >> a> There is only the fragmentation problem.
> >> Why do you undervalue this? Fragmented memory is not available for any

I see similar with MagiC 2, only I know Ease causes it by allocating a
2k block. When memory is going to be tight I ensure it has done this
before executing any large programs.

>The memory in subsequent free blocks isn't available and doesn't
>become available when other programs are closed down. As I said

While I think of it, does magx.inf have a _TSL variable in it? Not
good to have this around when booting!

3831. CAB - 'Refresh' bug ?

Newsgroup: comp.sys.atari.st
Date: 1996-12-02 00:00:00 UTC
From: ontap@queens-head.co.uk
Message-ID: <849570754.12730.1@f030.demon.co.uk>
Source record: 132846

Has anyone else come across this problem ?

Some web pages automatically send you to a new page after a few seconds
by using the following line of HTML:

<meta http-equiv="Referesh" content="0; url=http://(whatever)">

An example is:

http://www.easynet.co.uk/ray/public/ (with links for Simpsons addicts!)

The trouble is that this leads to a second 'refresh' page before arriving
at the main index page. If you then try and follow a link, CAB says it cannot
find the page in its cache.

The Dutch beer Grolsch has a web page that frefreshes itself several times
to change the message on the page, but after it does it twice, CAB says
again that it cannot find the page in the cache when it should be looking at the
remote server.

CAB (and I'm using the '030 version of v1.5 with CAB.OVL 1.20h and STiK v1.12),
seems not to want to connect to find the pages; yet the test HTML doc that
comes with CAB (in which all files reside in the 'localhost' directory on your
disk) doesn't seem to cause any problems.

Can anyone shed any light on this ?

Regards,
Andrew

Ah. I haven't actually tried using NED as an accessory. I'd rather run it as
and when required ie. as a program.
BACKPLAY was really intended to do just that under a multitasking os such as
MagiC.
Anyway, doesn't NED display a window when running as an accessory? Just
wondering (haven't tried it) :)

Gary.

3834. CAB - Why no pictures ?

Newsgroup: comp.sys.atari.st
Date: 1996-12-02 00:00:00 UTC
From: ontap@queens-head.co.uk
Message-ID: <849570654.12730.0@f030.demon.co.uk>
Source record: 132849

"http/1.0 406 No acceptable objects found" is the message I get
when I try to download the graphics for both Atari's web page at
http://www.atari.com and the Star Trek: First Contact web page
which can be reached via http://www.paramount.com.

This isn't, mind, "404 Object not found"; they're there - just not
acceptable.

Several sites seem to do this to me - instead of downloading thousands
of bytes of 'interesting' pictures, I just get the same 69 byte message
(which I have read by entering the URL and using the 'Source' button).

(Image loading _is_ on and 'Text instead of Images' is off!)

I'm running CAB v1.5 ('030), CAB.OVL v1.20h, STiK v1.12 on 4M Falcon.

Could this be to do with the new compressed jpegs - possibly, but the
same thing happens with gifs.

Is it to do with the PICS rating systems - possibly, but not all these
pages are rated.

Your help, as ever, is most appreciated!

: address appeared onto the menu line.Does this mean that I'm on that
: site because I don't get any text...

Actually, no. What happened was there was a failure somewhere in the process and the connection timed out and you got a blank page.

If you are sure SLIP is working (try using it with one of the other programs like Newsie or AtarIRC just to test), and you are sure the address you are trying to view is valid (try a couple of standard addresses like http://www.yahoo.com just to be sure), then the problem is probabaly your CAB.OVL file.

The ST-Format versions of the programs are very dated at this point. You will probably have better luck if you use the newest versions, available at: http://www.flinny.demon.co.uk or http://virtual-markets.net/vme/yac/

From what I read here, you take the program itself, rename it into
gemsys.prg (make sure it runs last in your Auto-folder) and -ding!-
you will have windows you can iconify, and more than 6 ACC's at a
time! :)

BTW, I tried it and it does work...Seems to slow my Falcon down just
a little but that may be subjective... Later... :)

My favorite Atari games, Dungeon Master and CSB were made by FTL. I've heard that there are also games called Sundog and Oids made by the same people. What type of games are these and are they very good?
Where could I get an original copy?

Thanks for any info,
Lloyd

>Bye, Hans Wessels

That's right Hans - up to a certain point. I think, that it is the
author's choice and should be left to him in which language he
publishes. You cannot ask a programmer to provide multi-lingual
versions of his software - it is VERY time consuming. The question for
me is not if the software should be published in German or English.
We, as the Atari community, should spread the news and help to create
those "Readme" files in different languages. I have been running a
little short in time lately, otherwise I would have translated more of
CBDH for Hallvard - I think it is a great program!!

Cheers,

Karsten

Source record: 132862

Which reminds me, I need the following form_alert() translated into
all of the _AKP supported languages:

English "[3][Cannot load RSC file!][Abort|Search]"
Deutsch "[3][RSC Datie nicht geladen!][Abrechen|Suchen]"
Francais "[3][Ne peux trouver |le fichier RSC!][Abandon|???]"

That leaves Spanish, Italian, Svensk, Turkish, Norsk, Dansk, Arabic,
Nederland, Czech and Hungarian. Please include the name of the
language in that language, abbreviated to 8 letters (e.g. Nederlnd
instead of Dutch).

The reason for this is that this is the only form_alert() which
cannot be put into an RSC file.

BTW, the _AKP cookie is supposed to tell what language to use on
this computer.

Also, the French translation needs to be updated.

No dilemma! Just format a disk on the PC to the size the ST expects (probably
720Kb) and use that for the transfers.

Hmm, I'll have to try that. It must have been an oversight on the
author's part. It actually says in the docs that you can copy it to
any directory, if I remember correctly.

Let me know if you get it to work with those programs.

Hey folks... discussion starter here:

Wondering what opinions are out there regarding the best system for digital audio & midi? There's many hardware & software configurations available for TOS. I've been fairly happy with Cubase Audio running on an original Falcon equipped with Steinberg's SMPII, FDI & FA8 boxes (running into a Fostex D-10 DAT.) It's fairly stable... sure who doesn't get an occasional gremlin once in a while, but it's much more "on" than "off."

For the sake of civility, please limit your responses to only the Atari & Atari-clone platforms. I'm not wanting to start a flame war here!\

I've been offered an Atari ST 520 for sale. It has a hi res
12 inch monitor, 3 1/2 inch floppy drive, mouse and cables,
power supply. It, however, has NO software. I also have a
PC (pentium). I booted it up and it comes up with the GEM
TOS. Can I transfer files on 3 1/2s or can I just get used
progs over the net? What about a hard drive? (Not SCSI,
I'd guess?) They paid $40 for it and I am prepard to offer
that much for it too. What do ya think?

Thanks,
Andy Filer

>Bye, Hans Wessels

OK, OK, I guess thats a tit-for-tat(American expression). But that begs a
more interesting question. In the March 1986 BYTE magazine, they said that the
1040ST was the first computer to sell for less than $1 per kilobyte of memory.
Only $999 for the 1meg ST, a real bargain. However, they were difficult to
buy here in the US. Several years later I asked one of the Tramiels why there
were hard to find in the US. He said that the European market was more
profitable!! And since they had limited production facilities...

Again, a more interesting question would be, "How many ST's, TT's, and Falcon's
are out there?" As a former stockholder I was *NEVER* able to get an answer
from Atari ;) Does anyone even have an estimate???

As an aside, I would guess more German computer users speak English than us
Americans speak German ;) Not an excuse, just a fact. For example, there are
more Irish Americans than the population of Ireland. We are just a big
melting pot of Immigrants from everywhere. Diversity is a big advantage for
American commerce and influence. What I'm trying to say is that us Atarians
should try to work together, from Singapore to Tasmania, no exclusions...

auf Wiedersehen, Hans

Charles

But in one way he is right!
Thinka bout the authors.
How many of them do speak both languages?
Well, I'd say that MOST of the authors of German software would also
understand and speak English. So it wouldn't be too hard to have at least
an English languaged documentation with the software.

I've seen this phenomena quite often, but I must say sometimes there is
TWO versions of the program (like premium mahjongg and others).
I think the worst things is they made the new Multi-TOS in German only
(I think it is).

Anyway, is there an English version of MagiC?

3858. Need help w/CAB Cache and Minix FS

Newsgroup: comp.sys.atari.st
Date: 1996-12-02 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <57tr23$tk7@ultra.sonic.net>
Source record: 132898

I have been using CAB/Stik for about two weeks now and they work great. I used the 1.31 package to install and then upgraded to the lastest versions of both. CAB030 1.50 and Stik 1.12 The cab.ovl is 43029 bytes. I'm not sure of the version.

My questions is how do I use a Minix file system for the CAB cache. I have converted a 20meg partition to a MinixFS with a file names lenth of 30. I then used that partition as my cache. How do I know if CAB is using files 30 char. long?

I have also noticed that when my disk cache grows larger that about 5 meg, CAB does a long write to disk after drawing each new page. When I first started, I setup a 30meg disk cache. After a few days, the wait for the write to complete when I would goto each new page became unbearable. I cleared out the cache and the write went away. Of course I then had to wait for everything to be downloaded across the modem. I reduced the disk cache to 10megs and now it stays full. The write is there and it's a pain but at 10megs, it is bearable.

I'm also using ant mail and it works just fine. The only problem I have had with ant mail is that it doesn't save the default.set when I make changes. But I found that if I saved a set under another name and then renamed it to default.set, it worked fine.

I just started using NEWSie yesterday, but I like it. I have found that when I try to scroll a window, it locks up. I can use the scroll bar and move one screen at a time, but if I hold down on it or if I try to fine scroll, my system locks up.

MF-FTP 1.03 bombs on me, but I have seen others are having the same problem.

Finger seems to work fine.

I have only been able to get FORECAST to work one time.

I have used telnet and it seems to work but after a few minutes the cursor and output becomes invisible.

My system is a TT with 8megs. 4+4 The modem I'm using is a NewCom 33.6. Picked it up at Circuit City for $110! My TT has tos 3.06 and I use the standard desktop.

I don't know if anybody has mentioned this yet but I thought I would say
that it is a good idea to turn the cache off. I know for a fact that
Amberstar will crash and burn when you try to save the game if the
cache is on.

I've had problems with US mail lately!!!
Once it was my fault...but twice I know it's been lost or something...
The first time...I forgot to put the apt. number on the address of
something that was to be shipped to me. Never mind that there are only
two apartments in this building...and that the same post man brings
my mail every day...they turned it back to the guy that sent it!

Another person sent a check to me...I've yet to recieve it and it's been
over three months!

Yep I got it as well.

Its a scam, usual warning signs are:-
1) time limited offer (why?)
2) payment by money order only (if its genuine why not VISA, AMEX etc)

So don't send the money.

j> Also, I don't seem to be able to view URLs with CACHE_ED 0.5
j> anymore. I know it worked in the past but now the option seems to be
j> greyed out all the time.

Do you have the Cache-ed program in the modules folder? OR with Cab.app? I had to stick mine in the modules folder for it to work.

j> And on that subject, does the Module folder do anything any longer?
j> I had to take CAB.OVL out of there in order for CAB to see STiK.

Yep ... althugh what yo've just said makes sense too .. I think you can use either tbh ...

j> Lastly, what is the best (only?) way to return to URLs while offline,
j> avoiding the Network is Down message and the emptying of the Cache
j> information for that URL.

Just don't run STIKTSR.PRG ..... I use Stoop to disable it and then everything is fine .. otherwise Cab is looking for Stik to conenct all the time ...

h> Isn't the Atari platform small enough as it is, if not to limit
h> software to only people speaking German?

h> Anyway, does anyone else here have views on this subject?

Yep! While I can understand the programmers putting in a lot of work and maybe not being able to speak any English, I would have thought that there would be people all over quite willing to translate their software for a small fee .....

It is a great pity when a lot of people give up on what is very good software simply because they can't understand it .... not much point programming if hardly any-one gets to use it!

Then again, we could all learn German/French etc. so we can use it all .....
;-)

Sorry everyone. I have tried my best to make it compatible, but all I have to test my games on is an STE and an STFM. It will work perfectly on both of these!

Dan. (http://newton.ex.ac.uk/general/ug/jones)

P.S. You could try pressing the space bar during the intro, this will skip it and go straight into the game.

Dan Jones.

> german will produce the most hapy people.

This is childish of you, Hans! If you count in countries like Norway,
Sweeden, Denmark, Finland, England, France, USA, Canada, Australia, Japan,
Mexico, Poland, Slovenia, India and more, you'll find that most of the
Atari-people in these countries don't understand German! That's simply a
fact!
Don't you think there's a reason why english versions aren't available
with german reasources? I guess it's because the authors can't speak
german!

I my self can't speak or write german, although I do understand some of
it, I don't know enough to be able to write a German resource...
But most German people can speak english to some extend, and it shouldn't
be that hard for them to convert their files to english.

Regards
Geir...

Yes. I agree completely. As far as I am concerned, it is criminal
that there is so much German software out there that many of us
cannot use.

There is no way I would attempt to use something like a Hard Disk
Driver if I didn't understand the docs/error messages - there is
far too high a chance of screwing up...

> Could anyone please tell me how I can manage this?

Atari St recognizes IBM format disks. If your ATARI has 1.44 drive
then you can use any PCformated disk directly. If you have an older
ST then you must format 720K disks on your pc and use them as a
regular ATARI disk.

I hope i helped.

3875. New CD ROMm for ATARI released

Newsgroup: comp.sys.atari.st
Date: 1996-12-02 00:00:00 UTC
From: aa414@FreeNet.Carleton.CA
Message-ID: <57uj2e$ss2@freenet-news.carleton.ca>
Source record: 132915

Hi everybody,
We are pleased to announce the addition of a new CDROM to our range of popular multimedia CDs for the ATARI platform (see below for PR):

Please check out our web page for more details and prcing information.
http://www.magmacom.com/~nima

Nima Montaser

November 30, 1996 Press release:

Homa Systems House is proud to announce the addition of yet another exciting CD to its range of supported multimedia CD-ROMS. World War II is a CD with over 2000 historical events and chronicles. The events range from the declaration of war and the evacuation of Dunkirk, to air battles and naval blockades.
With ACM, all the events are linked to their associated picture,video and sound clips ; all accessible through the easy to use and fast user-interface provided by ACM.

Features:
-All the photos and sound clips are "LINKED" the their appropriate articles
- Powerful Search feature allows searching the entries for any keyword(s), You may specify a searching criteria such as
- Event description
- Place of the event
- Date
- associated sound,video or picture
- Photos are viewable on any ATARI computer at 2, 16, 256, 15/16 bit colors
- Sound clips can be played on ATARI STE or better
- Video support (68030, Falcon or graphics cards only!)
- Save and Print
- Fully multitasking Interface:
- One main window
- 4 TEXT windows with BOLD and Italicized text effects, where necessary
- One picture window
- One tools window which allows picture selection, sound selection, reference selection, and ...
- Modern 3D interface on computers with at least 16 colors
- Flying dialog boxes

System Requirements:
Any ATARI Computer with 4 Megabytes of RAM, Hard disk and a monitor capable of at least 640x400 in monochrome.

Recommended system:
TT030/FALCON 030 with 8/16 Megs of RAM and resolution of 800x600(or higher)
in 256 colors (and a hard disk of course).

World War II is copyright of LivingMedia by IMSI

3876. Problem new modem/oasis 1.35

Newsgroup: comp.sys.atari.st
Date: 1996-12-03 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <849725998_OASIS_@ping.be>
Source record: 132716

Hello,

At the past German Atari show I've bought me a Microlink 28.8TQV
modem. The only problem I've is that the modem refuse to dial when I
use Oasis 1.35. With the other Internet/communication programs I use I
don't have any problems. Just Oasis 1.35 is fooling me.
Below you find my Oasis dialscript

```
#-----------------------------------------------------
configure:
init "ATZ\r"
dial_cmd "ATDT"
ld_code ""
# ********************
number "123456\r"
# ********************
retries 5
#
execute:
init
cwait 4000 "OK"
dial
cwait 40000 "CONNECT" "BUSY" "NO CARRIER"
cwait 10000 "gin" "NO CARRIER"
wait 500
send "username\r"
# ********************
wait 5000 "word:"
wait 500
send "password\r"
```

The only thing I get whilst running this script is
ATZ
ok
ATDT123456
ok

then after a while cwait 4000

ATZ seems to send something to the modem (the diodes are flickering)
but that's all. No dialtone.

Using the same script with my old modem work fine.

I would be very glad if someone could help me to sort this out.

Thanks
Martin

Theodore L Hopman (thopman@uoguelph.ca) wrote:

: : Is it possible, or more correct, has anybody written the necessary driver
: : software for a difital camera?

: Yes, it would be possible (although likely through the cartridge port, nt
: the parallel port due to a deficiency of lines). It would probably
: require some relatively simple electronics and software, as well as a
: relatively complete knowledge of how the digital camera outputs
: information. It hasn't been done, though; it would be an interesting
: project.

Greetings,

Both of the digital cameras that I have here at work, a Kodak
DC-50 and an Epson PhotoPC, use serial/modem cables to transfer their
files to the PC. It should only be a matter of contacting the
manufacturers of the various cameras for the appropriate information to
write software to drive them. Much easier than building a custom
cartridge interface, in any case.

Aloha,

John Perez

>all of you who have played SUPER TETRIS on an STE or STFM have enjoyed it.

WELL SAID!

I Still say you should have had it game tested, but people will still
moan at you, I tell everyone I havent got a Falcon or a TT so cannot
make games compatable, I then get flamed to hell and back for not
using GEM with all the know alls telling me it would then work on
every machine,
Then when you do manage, you will get people moaning that they need
backwards,
I am still getting complaints about software I made years ago that
wont work from HD, at a time I did not have a HD, still dont, was not
on line, had no contacts and ther's nothing in the programming manual
on the subject,
I have been publicly told that this is a "lame" excuse,

Unfortunatly you will HAVE to take it more than me, ten quid for a
tetris clone and people have the right to moan, they pay so they get
there say,

BUT!.....I also get a fair amount of good feedback and this tends to
outway the bad:)

I am also sorry about the incompatability of my software, like the
man said, give us a Falcon and we will knock your socks off :)

Cheers.............!ynoT

Sundog was a great graphic adventure, and a bit ahead of its time.
The idea was that you had to fulfill your granddad's legacy by
building a religious colony, and all you have to use is the freighter
Sundog. There was arcade action, barter, and an absolutely huge
playing environment. Unfortunately, my copy packed it in before I
could finish playing it.

OIDS is an absolutely marvelous cross between Lunar Lander, Asteroids,
and Choplifter. You navigate an Asteroids-style spaceship (complete
with guns, shields, and Mega-Destructo Bombs) through planetoids and
caverns, rescuing little oppressed droids (the Oids) as you go.
Absolutely wonderfully addicting game.

(funny you should ask this right now .. I just got an intact 1040 ST
for *free*, and tried out all my old S/W on it. I'd put OIDS up against
Quake or Mortal Kombat or any of their ilk .. for my money, it's the
best action game ever designed!)

I believe that there was also a Mac version produced .. at least, I've
seen several web pages saying that there was one .. but nothing for
any other platform, like a PC or Amiga.

> Where could I get an original copy?

I've seen a couple for sale on this newsgroup. Keep an eye out and you
should do okay.

No need to get defensive. I could argue that explanation, but it
would seem to be more productive to agree with a previous post in this
thread. It mentioned asking for beta-testers that have the machines
that you do not. I'm sure there are many in this newsgroup, including
myself, that would be glad to do this in order to create some more
universal software for all to enjoy.

John,

SoundPool has both and Audio editor (Audiomaster) and CD burner
(I think called CD Recorder, appropriately enough) for the Falcon.
I haven't used either, but Claes Homerup I believe has and uses both
products. (claes@dada.ct.se)

CAB 1.5 STIK 1.12 and CAB.OVL 1.8 (as some people have trouble with 12h). There are Falcon specific versions of CAB and the jpeg overlay, but the 131 package that you have should be stable enough to grab what you need from the CAB programmers home page. The URL is http://www.student.informatik.th-darmstadt.de/~aclauss/ or go straight to the Internet Access page by adding iak_e.html after the last / mark.

You'll have to find out the address for the smtp and pop3 servers on your isp's system, mine are pop3.concentric.net and smtp.concentric.net, your should be something similar, and you will ahve to ask them to find out, or it may be on there web site somewhere! You'll also need to know the address of their DNS (domain name server) mine is 199.3.12.2 the one they give you should be in that type of numeric format, there's a lot of other info you will need, but it is the same stuff that everyone need no matter which system they run! You'll be filling in the info in your default.cfg file in the STIK_CFG folder and the Server/Proxy info under Options menu in CAB.

>Actually, I haven't seen anything about downloading software at all
>in the WWW docs. Can I 'get' software through CAB/STiK? Everybody
>mentions web sites to get updates...

Yes, but it a lot easier after you have Swamp Dog's sdcab.prg installed as an exteranl viewer of .arc .zip .lzh .tos and .prg files, this way you won't have to hunt thru the cache to find and rename them! Once you have that program and have it installed all you have to do is click on the file

name on a webpage and CAB will download it and sdcab.prg will pop up and ask if you want to move or copy the file! Easy!

>Thanks, & I'm sure you'll be hearing more from me. (Hopefully

>:) I hate pestering my provider with stupid questions, since I'm
>that guy with the odd computer... I'd like to know what I'm talking
>about when I ask my stupid questions. :) :)

If they can't answer basic questions like these, then they shouldn't be running an ISP in the first place! Also if they are "bothered" by having too supply this info, then God help you when things really go wrong! A friendly and helpful support staff can make the difference between a good ISP and a totally unusable one, even if they have the exact same problems!

I agree that it will be silly to write for the Falcon when I don't even
have the machine. Sure as heck won't buy it since Atari has 'zero'
support for it. But if I were writing a game, which I hope to get off the
ground soon, I could give it to someone with a Falcon to test it. All I
can do is fix it(if STOS) and use correct TOS calls for some routines.

> WELL SAID!
>

> backwards,

The Falcon and TT were never 'ment' to run ST games. You have to getfix
programs and run at 8Hz. Ever that or don't play, it's that simple
people.

> I am still getting complaints about software I made years ago that
> wont work from HD, at a time I did not have a HD, still dont, was not
> on line, had no contacts and ther's nothing in the programming manual
> on the subject,

I think you can fix this just be not including the A: in the filename and
path. In STOS, I'm in the folders that I run the program from.

Still, I can get around this by using Psygham and Divert...no biggie. :)

> I have been publicly told that this is a "lame" excuse,

Cuz you weren't on-line or have a power computer setup? Those people were full of it. :)

> Unfortunatly you will HAVE to take it more than me, ten quid for a
> tetris clone and people have the right to moan, they pay so they get
> there say,

Like I said, as it is Super Tetris is THE best Tetris game on the ST. Has both arcade-like levels and regular computer game. Can't wait to register it.

BTW Tony, I think I know why I have some problems with Heartland and even Hero. With a hard drive, I have much 'less' memory why really rots :(At least I'm getting more memory soon, say way I got the hard drive...CHEAP :)

Hello all!

More than one month ago, in the last referenced article I made an error about MiNTnet and PAP authentication.

In /etc/connect (PPPKIT distribution) or $HOME/.ppprc (other distribution) you must add a "user YourLogin" line, and create a file /etc/ppp/pap-secrets (PAP-SECR on a TOS partition) containing a line "YourLogin * YourPassword".

Bye! Bruno.

You need to know the name of your POP3 mail server if it's different from
your SMTP server - there are places to enter that info in Antmail's config
dialog.

>Actually, I haven't seen anything about downloading software at all
>in the WWW docs. Can I 'get' software through CAB/STiK? Everybody

I don't think so. I've got one in my Falcon C-Lab, and it never bombs when
it's getting accessed. Maybe you have a problem either with the both models
or with the motherboard itself! Does it seem to be in a good condition?
Is it new?

> 2. Audio problems: after attempting to digitally transfer some audio from
> SCSI CD-ROM (toshiba 4x using ExtenDos Pro) I have found that the audio is
> very broken and distorted. A direct digital audio transfer of this type
> to 16-Bit, Stereo, 44k, AVR should be nice and clean, right? Anyone else
> tried this with their Falcon? Is this a C-Lab problem?

I've tried with my C-Lab Falcon, Toshiba 4x using MetaDos, and it has worked
very well.
The only problem I've got is stange sounds after running some MOD players (such
as Digital Tracker). When quitting (music is then off), I hear some noises,
which sound like small "fireworks"!!! I've made it test, and nothing has been
found, because it seems to be hasardous too!

> 3. Video timing problems: after attempting to run graphics demos (such as
> Lost Blubb) which have accompanying critically timed audio, I have found
> that this system falls out of sync (while my Atari Falcon does not).

because of the monitor frequencies (50/60 Hz), I think.

> Does the C-Lab board have different timing than the Atari? I had heard at
> one time that the C-Lab boards ran at 32mhz, any support to this? Any way
> to switch it back to 16mhz (after all, it doesn't matter how fast the
> computer is if it doesn't operate properly).

Never had these problems.
Do you have a MK-1, MK-2, or MK-X board?
The two first are similar to ATARI boards.
The sound circuit has been modified, and maybe some other little things.

Bye,
Jeremy

>progs over the net? What about a hard drive? (Not SCSI,
>I'd guess?) They paid $40 for it and I am prepard to offer
>that much for it too. What do ya think?

Andy, it's probably worth $40, alright, but you will have to find some software for it. Keep in mind that most game programs require a color monitor or television. If it is an unmodified 520ST, that means it has 520Kb of RAM and likely, TOS 1.0. Many later programs require 1Mb or more. You didn't say if the floppy was built-in or not so it might be either a single sided or double sided unit. Neither one is compatible with 1.4Mb HD formatted PC disks. Hard drives are available, of course, but they must be external units (SCSI) with a separate controller. For Atari parts and accessories in the US, I recommend Toad Computers... http://www.toad.net/.

3896. Atari stuff and more for sale

Newsgroup: comp.sys.atari.st
Date: 1996-12-03 00:00:00 UTC
From: japolis@boulder.earthnet.net
Message-ID: <japolis-0312962312570001@slip8.earthnet.net>
Source record: 132736

Hello! I have the for following items for sale, shipping is additional:

ATARI software bundle for sale:

GENEVA and Neodesk
FirstGraph presentation software
Diamond Edge
Diamond Back II
Warp 9 v3.7 (no disks now, but I'll look around)
MaxiFile from CodeHead
Mini Office (Nicely done graphs and stuff, from UK)
Learn to Read with Prof...ages 4 to 9
General Store with Bentley Bear, grades 4-7
Mixed-up Mother Goose...ages 4 and up
Image Cat cataloguing software for pictures
Atari ST Basic sourcebook and tutorial

The whole bundle... EVERY ATARI item, for $50

MAC software and hardware:

Adobe ILLUSTRATOR 5.5 upgrade disks only, no manual $50

Backmatic 2.0 highly rated automatic backup utility $5

Correct Grammar 3.2, $20

Expresso Calendar, $20

Quicken 4, $5

Grolier Multimedia Encyclopedia 4.0 $20

Intermail/ Microsoft mail 1.36. many users. $5 includes shipping

Rental Center helper software and disks and big manual $5 includes shipping

PageMaker 4.0, manuals, disks, box, etc. use for cheap upgrade- COMPLETE $100

CD-ROM drive and software, double speed, "Power User brand" complete with
all materials and software... good as new... $100

Car Stereo items for sale:
All items are used but in working condition. No, They are not stolen, I
just went through a phase where I liked installing and swapping around the
stuff. Life's too busy to mess with it now. My lack of free time is your
Big Audio Bonanza. And no, I'm not a dealer.
Some items have boxes and/or instruction books.

Car Stereo:
Mitsubishi RX791EM AM/FM High Power auto reverse cassette deck I don't know the power output other than it says "high power" on the front and it was always plenty loud for my rock and roll. There is a color code table for all the wires and connectors so you'll know what goes where. All parts are there, faceplate, knobs, etc. and it is the two-knob kind (not DIN) with an analog tuner, pushbutton presets, auto reverse, Dolby, and "NK" noise killer. All in all a pretty good deck. $make offer

Car Stereo AMPS:
Craig PowerPlay 48 watt amp $make offer
Concord HPA51 100 watt amp $make offer

Car Stereo extra special stuff:
Yamaha YEC-400 Electronic Crossover $make offer

Car Stereo Speakers:
Sony ES-S52 40 watt Coaxial 5.25 inch round speakers with grilles $make offer
Kenwood KFC-162 25 watt Coaxial 5.25 inch round speakers with grilles $make offer
Craig V203 10 watt Coaxial 5.25 inch round speakers with grilles $make offer

Car ALARMS:
Cliffalarm IMS (interior monitoring system) made by Clifford. Remote operation from fairly far away. Siren chirps when alarm is set or unset. Visible flashing LED in the car warns theives that the car is alarm protected. LED on the remote tells you remote is working fine. Panic alarm feature sounds the alarm if you hold down the remote button for 2 or 3 seconds. Shock and motion sensor is sensitive to breaking glass, but not to leaves dropping or cars passing by. Door triggers. Automatic reset after predetermined time to protection mode.
$25

Audiovox car alarm *BRAND NEW IN BOX* Model AA9147 with 2 remote transmitters, remote panic, built-in adjustable shock sensor, instant-on for hood and trunk, manual override, dash mounted status condition LED, active operation, 114db siren, starter disable
$50

Home stereo stuff:
DBX NX-40 Tape noise eliminator and disc decoder. Much better than Dolby.
$make offer

CAMERA stuff:
Hasselblad view screen for 500CM:
Plain screen #42200- $20

Zeiss Ikon/ Contaflex 35mm camera marked "(lightning flash symbol) matic" on the top, and Contaflex on the 50mm 2.8 Zeiss lens, Compur-x leaf shutter. Lens is "convertable" variety, switchable from 50mm to 35mm by changing the front elements, although I only have the 50mm lens element. Built in meter, and even a rudimentary "auto" mode. With case. I'd call it very good condition... no dings or dents, the textured black covering is perfect, the chrome is perfect, and the black finish is perfect.

Optically, perfect. The only rough areas are the battery compartment has a little corrosion on the inside and a little brassing on the outside. A "ready-case" is included but the leather is torn where the front connects to the back of the case. Surely a collectors item- $150

Metz SCA-351 adapter for Leica $25

Jeff Apolis 303-473-0511

TB!karacic@raf3.iiic.ethz.ch

>I (co-)run s0meone. TMC runs TB.

In that case I have been missinformed, you see when I got banned, I
could hardly then ask the bot something, could I, so asked others who
was running what?

>> It would seem that your bot bans anyone saying ATARI SUCKS?

>No. TB does. In fact it's far worse than that. "*gates*" evokes a
>``funny'' message. "*atari is shit*","*atari sux*","*atari sucks*", "*fuck
>atari*" and "^suxx*" result in kick bans. (possibly more, the last one is
>not documented and was only discovered by trial and error)

The above doesnt make it right, if we all agree that "Two wrongs
don't make a right" then we would surely agree that all those wrongs
can't make it either?

>> I was not aware of this, even though I have been going on channel #atari
>> long before you introduced a bot with YOUR rules???

>Lots of people are not aware of it, one of the many reasons it's a very very
>bad idea, as it catches even regular #atari people out; I think I'm

hear hear! exactly my point ?

>perfectly within my rights to say something along the lines of "with regard
>to customer support atari sucks" without fear of being kicked and banned.
>They're not my rules.

again we are in agreement,

>> So when someone (who obviously did know?) said ATARI S*CKS and I replied,
>> "Why do you say ATARI SUCKS", I was banned from the PUBLIC atari channel

>Because TMC decided to implement that. Perhaps you should complain to him?

perhaps I should....and sodding well will! ;)

>> If you do not have the fucking brains to run a bot that helps the ATARI
>> community then get the hell off and leave it to someone who does have the

>> brains,
>
>I was trying to do something helpful, I provided a bot (s0meone), which I
>thought would help. Maybe it did, maybe it didn't, either way I wasn't
>prepared for this level of abuse.

Ok heres the bit..
First off I had no way of finding out who ran what bot AFTER the
bloody thing had banned me, so I asked, somewhere along the lines
there has been a breakdown in communications to the extent where
names=bots has been mixed up,

I will not retract any of my comments regarding the stupid, pathetic
actions of the bots on channel ATARI

HOWEVER! I DO APOLOGISE FOR DIRECTING MY COMMENTS AT JAMES TROUP
WHEN THEY SHOULD HAVE BEEN AIMED AT TMC and indeed will be,

TMC, read my original comments, there all at you!

>s0meone, which I run, not TMC, will kick any person who has been banned (in
>this case you had been banned by TB); this is a perfectly valid and "right"
>thing to do (the only exception being bans placed by a split server, but
>eggdrops deal with that). the problem here is the bans placed by the bots,
>not bots kicking banned people.

I think if you where banned for no good reason, and tried to rejoin,
you would not be pleased at some other bot then kicking you off again,
it aint funny and I do not see how ANYONE has the right to kick me off
a public channel?, especially when I did not deserve it!

>> Channel ATARI is a public channel, who asked you to run it?,

>no one. but I did, however, ask several people if they thought the idea of
>me putting an eggdrop on the channel a good one, I didn't receive one
>negative response. also, I do not control the channel; apart from s0meone,

your bot goes part way to controlling the channel, I dont think we
came blame something that is not human, whoever runs the bots have to
take the stick for the bots actions, YOUR bot kicked me off channel
atari everytime i tried to re enter the channel, SIMPLE AS THAT, don't
blame the bot, blame the person running it! or persons?

>> channel, this is sad IMHO as it splits the ATARI irc community, and IT IS
>> YOUR FAULT,

> no, I'm willing to accept blame for a lot of things, but not, I think,
>this. Green, went off to another channel, for reasons of his own, mainly to
>do with him not getting ops anymore, this (the reduction of ops) is a tired
>discussion for another time and another place (where I'm not), but I don't

agreed, another argument altogether

>think I was the only one advocating the reduction of ops, and if I had been
>I kind of doubt it would ever have happened.

Actually I also wanted a reduction of ops, the less ops there are,
the less chance of them being abused was my reason, less ops happened,
and I get banned, Just not cricket is it old chap ? :)

> As for the trouble over the past couple of nights, looking at the logs, I
>can safely say that was started, at least, by the incredibly lame "bad
>words" bind on TB. The situation then snowballed fast as people started
>massdeopping the bots, who, predictably, got annoyed.

bots got annoyed ?..hmm I think I know what you mean:)

>> I did nothing wrong?

>in my opinion, yes [you did nothing wrong].

we agree again

>> banned me, thats half my internet pleasure wiped out, YOU are an arsehole,
>
>why, thank you. I just love all this so-accurately directed abuse, makes me
>feel all warm and cozy inside.

not as warm and cozy as I felt when I wrote it I can assure you ,
however It was late and I was/still am bloody annoyed, I again
apologise for directing them in your direction, your BOT would seem to
be partly to blame, where the biggest problem would NOW seem to be TMC

>> get off the channel and take your bot with you!

>no, I think not, I'm still going to come to #atari until someone bans me.

Like I say, the sentiments and comments stay the same but redirected
to TMC,my apologies again, although a bot that kicks me off channel
still stinks IMHO

>however, with regard to s0meone, fear not the evil,
>neverdoneanygoodwhatsover, nasty, dobadder, bot will be gone on Friday.

oooer good!

>James - wondering if it's really that hard to find out who runs which bot,
> it says when you dcc chat to either bot, or when you /msg s0meone

I never chat to bots as I never use them since ATARIBOT left, I never
need or use ops and never /msg them, I go on #atari for a nice
friendly chat with humans (although that may be a stretch of the
imagination in some cases <grin>)

> help, and did no one in the channel know the real owners?

its difficult amiss chaos when you are trying to get on the channel
and trying to get rid of dopey bots, I would not know how to find out?

Without bots, none of this would have happened?

Sundog is one of my favorite (and oldest) ST games. The storyline is like this:

You have just inherited a space cargo ship from a distant relative, AND his last contract. If you can fulfill the contract, you get to keep the ship (and the game ends). However, you know nothing about interstellar trade, and you don't have anywhere near enough money to buy all the goods required by the contract.

You can zoom between interstellar maps, interplanetary maps, planetary maps, outside cities, inside cities, and inside buildings/ships. You must overcome or avoid pirates, muggers, meter maids and (at one point) a war. Oh, and there is a penalty for restoring from a previously saved game (points only).

^ Nice Quote... :-)

I think the most of the programmers are not able to write a complete
documentaion in english. Some of them, sure. But the most - i think -
cannot.

Sure, there are A LOT of programmers who can write in english and which do
not. But think over the time you need to do this. Ok, for a TTP- or an TOS-
program it could be easy when you use the right programming- languages/tools.

But the problem are the GEM-programs cause they are using RSC-Files and
- in most cases - other files like "alert-definitions" or something like
that.

To create ONCE a english RSC-File it is easy. But when you change something
in your RSC-File (new object, new dialogues, more menuentries, more alerts,
and so on) you have to do the same changes in the "other RSC-File"...

>So, I'm wondering what the use is to make German-only software?

You rescue time. To write in german AND in english it is more work than
only write in my "dafault-language"...

>Isn't the Atari platform small enough as it is, if not to limit software to
>only people speaking German?

When i write a german program and i release it; i get more users here in
germany than in the rest of the world. Germany is the Atari-Mecca :-)

>A software-author would reach a much bigger crowd with at least having
>their software in English (as more people understand English than say
>German in the world).

much bigger? How much more; say in users...

No, i think not. But you are right; english would be understand in more
countries.

>It's not really that hard to traslate the window-menues into English as
>well, is it? (I've played around with "Otto's resource Construction Set" a
>bit on my own, translating/changing menues just for fun- and I'm not
>programmer)- it was pretty easy!

Sure! "I" don't say it is hard. But is is more work and i - mostly - don't
have the time to write an english documentation and create an english RSC-
File. And think over; every time you change something in your RSC, you have
to made the changes in the english RSC-File too. EVERY TIME. Believe me;
it's really a lot of "more work".

>are running a "BOT" on channel #atari
> well your bot just banned me from that channel?
>
Banned me too, that's why I am boycotting channel... like anyone cares!

> It would seem that your bot bans anyone saying ATARI SUCKS?
Actually I got banned for saying that my transfer rate sucked. More so,
I mistyped sucked and actually said suxked. I was kicked and banned
immediately. I was a tad annoyed, especially as I have been on that
channel for over 1 year. I was unable to rejoin because there were no
human ops to clear the ban. I understand that yesterday there were 3
bots! S0meone, TB and Aggrobot... this is botmania!! All we need is
Ataribot and an agreed set of peopel to be ops... tried and tested
people as it were. Noone else to be opped unless we all agree via a
committee ro something! Sheesh, what am I saying? This is supposed to be
an escapism from all this crap!!

BTW, how often does TMC actually use teh channel? Not all that often
IMO, then remove his stinkin' bot! It even changes the topic for some
reason. Whatever happened to humans being in charge? Hmmm....

> I was not aware of this, even though I have been going on channel
>#atari long before you introduced a bot with YOUR rules???

Hear! Hear! Me too!!!

> So when someone (who obviously did know?) said ATARI S*CKS and I

"eee up mother, trouble at mill"

J.J.Troup@comp.brad.ac.uk or JamesST or whatever you are called, you are running a "BOT" on channel #atari
well your bot just banned me from that channel?

It would seem that your bot bans anyone saying ATARI SUCKS?

I was not aware of this, even though I have been going on channel #atari long before you introduced a bot with YOUR rules???

So when someone (who obviously did know?) said ATARI S*CKS and I replied, "Why do you say ATARI SUCKS", I was banned from the PUBLIC atari channel

If you do not have the fucking brains to run a bot that helps the ATARI community then get the hell off and leave it to someone who does have the brains,

TMC who runs the S0meone bot would not seem to be that person as he would appear to have less brains than you, if thats possible? as he kicked me when I tried to rejoin,

Channel ATARI is a public channel, who asked you to run it?,

You will find that a lot of atarians who have been using that channel for more years than you seem to have brains, have deserted and started another channel, this is sad IMHO as it splits the ATARI irc community, and IT IS YOUR FAULT,

I did nothing wrong? yet your brain dead bot, programmed by YOU! banned me, thats half my internet pleasure wiped out, YOU are an arsehole, get off the channel and take your bot with you!

3912. C-Lab Falcon Problems

Newsgroup: comp.sys.atari.st
Date: 1996-12-03 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <58069b$pel@news.Hawaii.Edu>
Source record: 132767
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

I have recently assembled a Falcon system using a C-lab Falcon motherboard, but have been experiencing some problems.

1. My FPU doesn't work: tried both 16mhz and 33mhz models of 68882 math co-processor and both cause many bombs when accessed. Is there something that must be done to make the C-Lab accept an FPU?

2. Audio problems: after attempting to digitally transfer some audio from SCSI CD-ROM (toshiba 4x using ExtenDos Pro) I have found that the audio is very broken and distorted. A direct digital audio transfer of this type to 16-Bit, Stereo, 44k, AVR should be nice and clean, right? Anyone else tried this with their Falcon? Is this a C-Lab problem?

3. Video timing problems: after attempting to run graphics demos (such as Lost Blubb) which have accompanying critically timed audio, I have found that this system falls out of sync (while my Atari Falcon does not).

Does the C-Lab board have different timing than the Atari? I had heard at one time that the C-Lab boards ran at 32mhz, any support to this? Any way to switch it back to 16mhz (after all, it doesn't matter how fast the computer is if it doesn't operate properly).

Aloha,

John Perez

So it's criminal your education system didn't teach you enough german to get started in 'computer german'. It's one of the three major european languages.

> There is no way I would attempt to use something like a Hard Disk
> Driver if I didn't understand the docs/error messages - there is
> far too high a chance of screwing up...

Yes, I see that point. But the reverse is still true for germans using english software. The only way to change that is making the german software authors aware of an big enough english market for their software so they think it's worth the trouble writing english documentation. It's not as easy as it looks.

Bye, Hans Wessels

I realy doubt that! Taking Germany, Austria and a part of Switserland and count the Atari user base.. That could be more then the rest of the whole world. Those countries are the only countries where Atari compatible computers are still in production.

> Don't you think there's a reason why english versions aren't
> available with german reasources? I guess it's because the authors
> can't speak german!

That's true.

> But most German people can speak english to some extend, and it
> shouldn't be that hard for them to convert their files to english.

Here it's starting to be fuzzy. Remember, german is one of the three biggest european languages (together with english and french). Those languages are big enhough to ban all other languages out their media. In those countries the knowledge a second languange isn't as common as it is in yours and mine. Most coder can read and understand english but writing enlish??? Maybe we should wait for a german coder in this discussion and ask his opinion.

Bye, Hans

No, I have never seen any estimates. I am wondering how many users there have been, and even more interesting: what is the current uers base?

> As an aside, I would guess more German computer users speak English
> than us Americans speak German ;) Not an excuse, just a fact. For

Yes, I think you are right on that point. Esp. the demo scene, which I am most familiar with, has a more than avarage population of on University level educated people. But from the computer club here in Twente, I know people who use the Atari for MIDI, who don't understand english nor german. Especially the technical parts of those languages are completely
Abracadabra for them. I can imagine the same is true in germany, maybe even worse, because on German television all forgein languages are dubbed, so many people aren't even familiar with the sound of a forgein language (Try, for example, to order a milkshake in a german MC Donalds, the gril taking the order didn't understand (our maybe she wouldn't?), it had to be a 'Milchshake'! (I have seen that happen in a MC Donalds located near a well known party place in Bremen)). So I can understand german authors doing their software in German.

Hi Andrew,

There are a lot of problems for Web Surfer's these days. You found one.
There ARE compressed JPEG's, Java HTML's, and other problem files that
CAB/STiK and other browsers can't handle. The *ONLY* chance you have of
viewing these Web sites(www.paramout.com links to firstcontact.msn.com)
is by using the ANONYMIZER (www.anonymizer.com/open.html) and they are
not always on line. I was able to see the "firstcontact" page only this
way. This site is "msn" so it's designed for guess which browser???

I found one site that *IMPLIED* that it uses Animation JPEG's. Impossible?
I don't know as I was unable to view them ;(I just got a blank page of a
72k file that appears to be a compressed JPEG.

Another problem is memory. I have a 14meg Falcon and now and then I get an
out of memory error.

C'est la Vie,

Charles

Yep, sounds right.

>I think the problem may come from the fact that most C compilers have a
>function that allocates memory in Bigger blocks so as to overcome TOS's
>40-folder bug.

Indeed many do. Mine certainly does. I find this feature can be rather
handy when one of the memory hogs is starting up because the arena can
usually satisfy the requests I make. My programming style leans toward
lots of small linked blocks rather than a few large blocks, if
possible.

>However a new program will always be loaded into the largest possible free
>block, even under TOS.

This is true under all os versions I have heard of. What I'm not sure
of offhand, is the scheme MagiC uses for a "data" Malloc(). It would
be nice it it located the smallest satisfactory block but I think it
goes for the "quickest" one.

>

I'm not going to be drawn on that because I have no way of telling if
the programs concerned do it on purpose or as a side effect of their
startup code. ;-|

Sorry, thats wrong, extenDOS do work with the 4x from Plextor, so why does the german soft dosen't support this, too?

So please german developers, Hard & Soft and Stefan, please make your soft working like extenDOS which support a realy good drive like the plextor!

I bought the comercial CD-TOOLS which doesn't work with the plextor (SCSI-AUDIO-Transfer). Metados is already a bit shit, because of the errors with MultiTasking-Systems and the path-destroy error.

Ciao

> still need to be ironed out.

Hi, just to let you know: SUPER TETRIS was designed on an Atari STE, and then tested using an STFM so that I knew it would work on both of these machines. It did have a bug that meant it wouldn't work on the STFM, which has now been fixed. So SUPER TETRIS is now 100% compatible with the STE and the STFM, at no point did I say that it would definately work on a Falcon, a Mega or a TT. I am sorry about the incompatibility (not bugs!), but I have done my best with the hardware I have available to me. If anyone would like to give me a Falcon, a Mega and a TT then I will gladly make a new version that will work on all machines! Anyway, I hope that all of you who have played SUPER TETRIS on an STE or STFM have enjoyed it.

Dan Jones.

Congrats, you've probably wrecked your SCSI chip for sure and if possible also something from the drive itself. In Falcon, the SCSI port itself isn't that well protected at all, even static electricity can damage the SCSI chip (I have some experience in that), i.e. if you have your external drive connected to non-earthed power connector and Falcon is in earthed connector, there is a possibility that there is different 'static balance' between two different devices....

Try another SCSI drive and see if, programs like ID CHECK or similiar can find any devices in the SCSI chain.

Regards,

Miika

Greetings,

I am in need of software that will convert samples (direct from disk) from at least AVR, WAV, and AIF; preferably including whatever format Logic Audio uses. These files are generally not going to fit in Ram, so D2D operation is necessary. I would appreciate any recommendations.

I have been looking at 525 and SSAM108B with limited success as of yet. Has anyone out there had success converting/reading Cubase Audio AIF files with SSAM108B (Superb Sample Editor)? I have Clarity 16, but it will apparently only save in AVR format.

Also, anyone out there that is making audio CDs (via CDr) with their Falcon's, I would appreciate knowing how this is accomplished (that is, which software can convert these audio files to those that can be written to CDr).

This is not necessary. CAB does not store the actual filenames off the WWW page in the cache, it just numbers all the files. So long filenames will not help you in any way, and I understand that CAB won't in fact use them at all.

You might be thinking of an early version of CAB that stored the files with their original names. This one did work better on a filesystem capable of long filenames.

s0meone will indeed kick anyone who is banned. It's rather an annoying
feature in my opinion and I'd like to see it removed, but none the
less, I would point out that it only kicked you because TB banned you
immediately beforehand.

I used both CD Tool and Extendos Pro with a Plextor Quad Plex SCSI. I
have no
problems with either for general use, and both seem to be good products.
There is
no problem with the Plextor and Extendos recording (copying) to hard
disk. I didn't
think that CD Tool had this option however, but it has been a while
since I booted it
so the fact that it does not support CD to Hard disk may be true. I
don't know about
the other statements. I did utilize CD Tools when MagiC 4 and Ease came
out as Extendos
Pro didn't support one of it's functions. Roger quickly revised his
program (Extendos)
to function properly with MagiC and Ease and there hasn't been a problem
since.
I would also like to say, if you understand German the least little bit,
SCSI Tool
is an excellent package, being much more compatible than some of the
other driver

utilites offered in the TOS market. It is well worth the money and works fine with
my Falcon with 1.6gb Maxtor EIDE and EZ135 IDE internal drives and a slew of SCSI
devices, also SCSI Tool can format an IDE drive EZ135 cart that is compatible with
an EZ135 SCSI connected to a Mac for use under MagiC Mac. The "other" utilities
"format" option was not compatible with that setup.

Mike

[23:34] #atari: mode change '+b-o *!*stosser@stosser.airtime.co.uk stosser ' by
TB!karacic@raf3.iiic.ethz.ch

I (co-)run s0meone. TMC runs TB.

> It would seem that your bot bans anyone saying ATARI SUCKS?

No. TB does. In fact it's far worse than that. "*gates*" evokes a
``funny'' message. "*atari is shit*","*atari sux*","*atari sucks*", "*fuck
atari*" and "^suxx*" result in kick bans. (possibly more, the last one is
not documented and was only discovered by trial and error)

(apologies to anyone offended by the language)

> I was not aware of this, even though I have been going on channel #atari
> long before you introduced a bot with YOUR rules???

Lots of people are not aware of it, one of the many reasons it's a very very
bad idea, as it catches even regular #atari people out; I think I'm
perfectly within my rights to say something along the lines of "with regard
to customer support atari sucks" without fear of being kicked and banned.
They're not my rules.

> So when someone (who obviously did know?) said ATARI S*CKS and I replied,
> "Why do you say ATARI SUCKS", I was banned from the PUBLIC atari channel

Because TMC decided to implement that. Perhaps you should complain to him?

> If you do not have the fucking brains to run a bot that helps the ATARI
> community then get the hell off and leave it to someone who does have the
> brains,

I was trying to do something helpful, I provided a bot (s0meone), which I
thought would help. Maybe it did, maybe it didn't, either way I wasn't
prepared for this level of abuse.

> TMC who runs the S0meone bot would not seem to be that person as he would
> appear to have less brains than you, if thats possible? as he kicked me
> when I tried to rejoin.

[23:34] stosser!stosser@stosser.airtime.co.uk kicked from #atari by
s0meone!james@mnb20.pet.cam.ac.uk: banned

s0meone, which I run, not TMC, will kick any person who has been banned (in this case you had been banned by TB); this is a perfectly valid and "right" thing to do (the only exception being bans placed by a split server, but eggdrops deal with that). the problem here is the bans placed by the bots, not bots kicking banned people.

> Channel ATARI is a public channel, who asked you to run it?,

no one. but I did, however, ask several people if they thought the idea of me putting an eggdrop on the channel a good one, I didn't receive one negative response. also, I do not control the channel; apart from s0meone, there are two other regular bots (TB and Aggrobot, and the occasional n0one). s0meone, is owned and controlled as much by mark as it is by me (it runs on his machine), and s0meone has 3 other masters (apart from mark and myself), who could have corrected this situation.

> You will find that a lot of atarians who have been using that channel for
> more years than you seem to have brains, have deserted and started another
> channel, this is sad IMHO as it splits the ATARI irc community, and IT IS
> YOUR FAULT,

no, I'm willing to accept blame for a lot of things, but not, I think, this. Green, went off to another channel, for reasons of his own, mainly to do with him not getting ops anymore, this (the reduction of ops) is a tired discussion for another time and another place (where I'm not), but I don't think I was the only one advocating the reduction of ops, and if I had been I kind of doubt it would ever have happened.
As for the trouble over the past couple of nights, looking at the logs, I can safely say that was started, at least, by the incredibly lame "bad words" bind on TB. The situation then snowballed fast as people started massdeopping the bots, who, predictably, got annoyed.
I have removed the revenge feature from s0meone, something I didn't want to do, but since people seem fond of mass-deops, it would seem necessary, however I can not remove the "atari sucks" binds on TB, that is up to TMC.

> I did nothing wrong?

in my opinion, yes [you did nothing wrong].

> yet your brain dead bot, programmed by YOU!

s0meone did not ban you. TB did. I did not program TB or s0meone. They are eggdrop bots, they are available to download for anyone. TMC did add the "bad words" bind (also freely available to download). I did not, however.

[eggdrops are not generally braindead, but like anything customizable, they can be made to be braindead, which IMO, is exactly what TMC has done by adding the "bad words" bind to TB]

> banned me, thats half my internet pleasure wiped out, YOU are an arsehole,

why, thank you. I just love all this so-accurately directed abuse, makes me feel all warm and cozy inside.

> get off the channel and take your bot with you!

no, I think not, I'm still going to come to #atari until someone bans me.
however, with regard to s0meone, fear not the evil,
neverdoneanygoodwhatsover, nasty, dobadder, bot will be gone on Friday.

James - wondering if it's really that hard to find out who runs which bot,
it says when you dcc chat to either bot, or when you /msg s0meone
help, and did no one in the channel know the real owners?

>

There is also a formatter with CBHD (4.5.7 has it) & SED can do this also.

However, I have a question on the size of the hard disk that can be used
with an STFM (UK TOS 1.04).

In previous posts; I learned that up to 512 MBytes can be used with with
an ST (TOS <2.06). When I format a disk using CBHD (or SED) to this size,
it never works.

Usually, when I double click on the drive, the icon just gets highlighted,
but no window appears. Sometimes the mouse changes to the busy bee, then
the ST is hung up.

I thought this was a symptom of using AHDI, but the same thing happens
with CBHD.

I have looked at the partition information (using supraedit.prg) & the
sector size is 16Kbytes. Is this too big for the ST?

All the formatters I have tried seem to format a 520 Mbyte disk this way.

I have been able to get around this by manually editing the partition
information to half the sector size & double the number of sectors
available.

I only use these disks for Minix partitions, never TOS.

Is 8K/sector the max a plain ST can handle?

The maximum size of a partition would then be 512Mbytes (8k sectors by 65534).

Any comments?

>where the texts or the speech are changing every twenty seconds!
>In word processors it is even more like this!

I dont understand this. It is trivial to either:

a) supply separate RSC/doc files which support the different languages
(many programs - eg CAB - do this)
b) auto-detect the nationality of the computer (from _APK cookie, or
other methods)

As you rightly say, a program which uses both at once is *really* bad,
but can you give an example of a program which does this?

a) neither /dcc chat to TB or s0meone, /msg s0meone help or indeed /msg'ing people in the channel is hindered in anyway by being banned from the channel.

b) stosser was unbanned from the channel and came back on (that's logged), and did in fact ask people on the channel who the bot owners were, I'm told (I don't log public messages to the channel), and was told on numerous occasions that it was in fact TMC who owned TB and not me.

Sorry about the reiteration of your text, but someone had to do it :)

A program called BIGDOS (available at ftp.cnam.fr/pub/Atari/Disk)
claims to be able to format over the 512Mb barrier. Never tried it.
Can't guarantee it. But you can check it out nevertheless...

>3. Video timing problems: after attempting to run graphics demos (such as
>Lost Blubb) which have accompanying critically timed audio, I have found
>that this system falls out of sync (while my Atari Falcon does not).

I think this is caused by the 50/60Hz refresh rate of the monitor.
Videomaster Falcon had the same problem at 50Hz, but not at 60Hz. I
think there's a PD program which ups the refresh rate. I find all my
goodies at ftp.cnam.fr

Hope this helps!

It's a standard PC-type clock battery. Take it with you to a place that sells lots of different kinds of batteries, and they should be able to fit you with a replacement with no problem at all. They don't even have to know you have an Atari :)

Yes, it would be possible (although likely through the cartridge port, nt
the parallel port due to a deficiency of lines). It would probably
require some relatively simple electronics and software, as well as a
relatively complete knowledge of how the digital camera outputs
information. It hasn't been done, though; it would be an interesting
project.

To cut this short - if someone continues to run a bot that will ban people
from the #atari channel, I will speak to the admins at various IRC sites -
and the entire domain of the bot runner will find it can no longer log onto
IRC. Bots are a violation of the terms of service of most IRC servers.
They're no different than spam - a waste of bandwidth, and annoying to the
/real/ users of the service.

3957. internet connecting

Newsgroup: comp.sys.atari.st
Date: 1996-12-03 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <4b9_9612031225@flight.org>
Source record: 132812

Ok, I plan on connecting up to the Internet this week. I want to use Cab/Stik on My 14meg un-modified Falcon, TOS 4.04. My provider tells me I can get a straight SLIP connection from them here in the USA.

I got the WWW131 package from a BBS. Is everything pretty stable in that package? I see I'll have to find HSmodem and install that too. Otherwise, will 1.31 get me up and running with my Falcon? There have been so many updates of late, I forget what was stable...

So, I think I can follow the instuctions to get the web browser working. (Famous last words - we'll see how many cries for help I'll post next week! :)

How does e-mail (AntMail) work? I see mentions of POP3, SMTP, etc. Huh? Do I need to know about POP or anything else from my provider, or is that all automatically there, and everything will install & work just fine???

Actually, I haven't seen anything about downloading software at all in the WWW docs. Can I 'get' software through CAB/STiK? Everybody mentions web sites to get updates...

Thanks, & I'm sure you'll be hearing more from me. (Hopefully through the new connection, & not questions about getting connected! :) I hate pestering my provider with stupid questions, since I'm that guy with the odd computer... I'd like to know what I'm talking about when I ask my stupid questions. :) :)

3958. German-only software: why? views on this anyone?

Newsgroup: comp.sys.atari.st
Date: 1996-12-03 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <4ba_9612031225@flight.org>
Source record: 132813

HT> I've come across several great packages on the net (they
HT> definitely looked impressive), but as the menues/docs have
HT> been in German, French or whatever they've been too hard to
HT> understand, thus giving up the package completely. Anyway,
HT> does anyone else here have views on this subject?

It is difficult to fault anyone for progamming & writing in their native language. Just as it is difficult for me to figure out a French or German *.DOC file, I'm sure it is difficult for the programmer to figure out English enough to write a doc file for me. :) And, converting a large manual (like Papyrus, etc.) has got to be pretty darned expensive. So, I see why it is _not_ done. And, I'd be pretty full of myself to _demand_ that everyone include an English file & resource file, because that's what _I_ speak....

But, I do agree with you. English does seem to be the international computer language, for better or worse, and I do believe sales would go up, and if _at all_ possible, _please_ include some English help. Thank you. :)

> channel?, especially when I did not deserve it!

a bot is precisely that, a bot; it can not tell whether you deserved to be
banned or not. all s0meone did was kick a person who has been banned from
the channel by one of the other ops. it was not the bot which banned you
simply for saying "atari sucks" and kept re-banning you; it simply kicked
you after TB (unfairly) banned and re-banned you.

> > > Channel ATARI is a public channel, who asked you to run it?,

> i tried to re enter the channel, SIMPLE AS THAT, don't blame the bot,
> blame the person running it! or persons?

no it's not simple as that. if TB had, zufall, disappeared immediately after
it first banned you s0meone would have left you alone. the problem was the
ban TB first applied was never taken off (in it's mind), so TB kept
re-banning you. that was and is a problem (both the reason for the ban and
the continual re-application of the ban). s0meone was just kicking a person
banned by another op (it can not and should not be expected to make
morality judgments on the correctness of bans).

> > > channel, this is sad IMHO as it splits the ATARI irc community, and IT

> > massdeopping the bots, who, predictably, got annoyed.
>
> bots got annoyed ?..hmm I think I know what you mean:)

this was, in retrospect, a poorly chosen phrase. as mark explained, eggdrop bots monitor actions against themselves and those it considers "f"riends, if these "f"riends are abused (de-opped/kicked/banned), the bot will react accordingly to the person who abused the "f"riend. this feature has real uses, however, in the current situation, especially with TB's lame setup, it was not suitable. I realize this now and accept that it was a mistake to leave it on. I've now turned it off.

> > > get off the channel and take your bot with you!

[snip]

> > however, with regard to s0meone, fear not the evil,
> > neverdoneanygoodwhatsover, nasty, dobadder, bot will be gone on Friday.
>
> oooer good!

no, I don't think so. TB will still be there (as will Aggrobot), and it is TB which will still kick ban people for saying ``bad words'', like "atari sucks".

> > James - wondering if it's really that hard to find out who runs which bot,

> some cases <grin>)

I'm not suggesting you should be /msg-ing or /dcc chat-ing to them, however it is one way to get correct information on the owners.

> > help, and did no one in the channel know the real owners?
>
> its difficult amiss chaos when you are trying to get on the channel and
> trying to get rid of dopey bots, I would not know how to find out?

well evidently you did need to find out, since you asked (as you yourself have admitted), either someone gave you the wrong information or you misread it.

> Without bots, none of this would have happened?

yes, but, and more importantly, without the ``bad words'' bind on TB none of this would have happened.

Perhaps that explanation is too complex - but I don't think so.

What happens on many IRC servers where the admins discover unauhtorized bots running, is that the entire domain where the bot is located gets banned from the server. That would mean, for example, that NO ONE at cam.ac.uk would be able to logon to irc.blackened.com until the sysadmin at Cambridge contacted the admins at blackened.com to get the dispute cleared up.

I strongly suggest that you contact the admin of the IRC service thorugh which you connect and ensure that your bot is not violating their acceptable use policy.

In the meanwhile (and for the forseeable future), I will continue to use only irc.warnerbros.com - where bots are strictly forbidden, and the total load on the server selcom exceeds 100 users.

TOS 2.05

>How/what formatter did you use ?

HDX/AHDI 5.0 - configured with AHDI Configurator from Uwe. I set it for
8192 byte clusters. Mind you, the formatter has no clue what size the
clusters are - it just blindly sends a "format" command to the SCSI device.

>> Uwe Siemet (sp?) recommends that you never exceed 512 megs per partition.
>
>Fair enough, 512 meg would be enough if I could get it to work.

I intend to buy HD Driver ASAP - the performance, reliabilty, and support
are all outstanding. My second choice would be ICD Pro. The only reason
I'm using AHDI at all right now is lack of funds (look at the calendar <G>).

You can get hi-rez on a plain VGA monitor. You aren't going to get ST low
or medium without an add-on video card, or a multisync. Here's the
Multisync FAQ, anyhow:

MULTISYNCH MONITORS
COLOR AND HIGH RESOLUTION MONOCHROME
DISPLAY FOR THE ATARI STs

COLOR BETTERS THE ST'S SC1224

Most multisynch monitors, but not all, will work with the
ST's RGB output and vertical refresh rate. Advantages are
operation in high resolution monochrome and both low and medium
color using a single monitor. An additional advantage is the
better color rendition with more differentiation in tonalities.
Subtle shades are better represented than on the ST. With Sony
color monitors, the colors are Kodachrome in quality -- rich
and saturated. On the negative side, none of these color
monitors will match the sharpness of the Atari SM124 monochrome

monitor. This monitor, as with other monochromes, uses single pells or pixels to represent screen images. Color monitors must use three (Red, Green, and Blue) to form the same point on a screen. As a consequence, they cannot give the crispness and detail.

THE CRITICAL TEST -- MONOCHROME SHARPNESS

If you use monochrome most of the time, as many do with Spectre Macintosh emulation, the major question is whether or not a softer and coarser monochrome display on a color monitor is acceptable for continuous use. It doesn't make sense or cents to buy one of the lower priced multisynch monitors as an economy measure just to obviate the need for two monitors where high resolution monochrome is important. And the purchase of a higher quality and higher priced monitor in the $600 to $650 range -- such as the Sony 1304 HG or NEC 3D may not make much economical sense either. However there are those who continue to have the desire for these types of monitors -- unfortunately, I am one.

MONITOR SWITCH BOX -- ROLL YOUR OWN

The following pages give pinouts and wiring diagrams for construction of a Monitor Switch Box so that a multisynch can be used in both color and monochrome with the ST's monitor output. The box is needed to ground the Monochrome Detect line from the ST and force it to boot in high resolution monochrome. It also switches from the ST's RGB color output to Monochrome Intensity output to drive the monitor. The pinouts for all three Sony monitors (1302, 1303, and 1304) are the same. NEC monitors such as the Multisynch and Multisynch II use the same pinouts. Where Sony and earlier NECs use DB-9 inputs, the new NEC 3D uses a DB-15 connector. The NEC pinouts shown are still valid for the 3D. A converter cable -- DB-9 to DB-15 supplied by NEC -- will give the proper interface. This converter is also availabe commercially as a one piece plug unit. Other monitors, such as the Mitsubishi Diamondscan, use different plugs. The Mitsubishi uses a DB-25 which is the same in pins and shell as an RS-232. The ST's output can be routed to these monitors with the proper pinouts and plug.

The Monitor Switch Box can be wired for any monitor output configuration. If another monitor is used, a simple conversion plug is comercially available to reconfigure outputs if both monitors use DB-9 plugs. If plugs are different for two monitors, then wire a cable with the two different terminations. The least effort and highest cost approach is to buy a cable with one of the plugs already made up. If you are good with a soldering iron, then buy the connectors and makeup your own cables. The ST 13-pin DIN plug is not that easy to work with. The solder or rear side has pins just like the

front, and soldering wires to these contacts is not a snap. ST monitor cables, with a DIN 13 male on one end and unterminated on the other, are available from two or three sources. Try Best Electronics or Practical Solutions. A 4-pole, double throw switch (On-On) will be required for the Box. Also fit the Box with an RCA jack if you want sound routed to a stereo or self amplified speaker like those available from Radio Shack. If you have Tweety Board, this will not be needed.

MARKET FAILURE OF SWITCH BOXES

There have been several attempts to market these monitor switch boxes, and all but the most recent have not met with success. The first reason is high price. The first box produced was overpriced in the $200 range. The second reason is differences in pinouts and plug configurations for the variety of monitor inputs. There is no standard. The third reason for lack of success is the small ST market for alternative multisynch monitors.

Making your own box for $35 or less in parts will give you an opportunity to try out several monitors at a dealer and select the one that is most acceptable for high resolution monochrome display. But a problem is that most dealers don't have the more expensive monitors broken out for display, and you may not be able to give one a try. Be persistant. Ask the dealer if he can recommend a customer that has a monitor you are interested in. But by all means, try before you buy to insure that the display meets with your satisfaction. Don't take the word of others because each has different levels of acceptability.

MULTISYNCH MONITOR PERFORMANCE

I have tried the homebrew Monitor Switch Box with the Sony 1303 and the NEC Multisync and Multisync II. The 1303 is not the quality of the 1302 which has a finer dot pitch. However, the color was excellent but the monochrome display was soft. The Sony 1302 has a .26mm dot pitch. This is a measure of the center-to-center distance between dots and is also an indicator of dot or pixel size. Until recently, the 1302 had the finest dot pitch of any color monitor on the market. And dot pitch is a better indicator of sharpeness than horizontal and vertical lines of resolution. The lines are also a function of screen display size; so don't be mislead by more lines resolution. It simply might correspond to a larger monitor display size. And as the monitor size increases, the dots are made larger and render a less sharp display.

But Sony is less than forthcoming in its specifications for the 1302. While touting the .26mm dot pitch, they don't publish the fact that this applies to horizontal spacing only.

The vertical spacing is different, perhaps .32mm which is nothing to shout about. As a consequence, you may see black horizontal lines that separate the color display lines. They are not dramatically obtrusive, but they are there. On the plus side, the Sony's have that superb Kodachrome color that is richly saturated. The blacks are black, and the background in monochrome is absolutely paper white. The 1302 is satisfactory for ST monochrome use.

This model is being superseded by the new 1304 HG that has a .25mm dot pitch. The specifications on this new monitor closely match those of the Apple Color Monitor for the Mac II. This monitor is made by Sony to Apple's specifications, but it is not multisynch. I use one on a Mac II and it is excellent in both monochrome and color. Because of the closeness in specifications -- the only two monitors available with a .25mm dot pitch -- I strongly suspicion that they are the same. Sony has simply adapted the Apple version for multisynch use. And if I were to place my money on a monitor that would be highly acceptable for monochrome display with the ST (sight unseen in an actual test), it would be the Sony 1304 HG. When viewed in color on an IBM PC, the dots appeared extremely fine and it appears that the .25 pitch holds true for both vertical and horizontal.

The 1303 is not as good as the 1302 or 1304. However it did give a good monochrome display that was similar in size to the ST's color display in medium resolution. Although good, it does not come close to matching quality of the SM124. Since I spend at least 60 percent or more of my time in Spectre/Macintosh operation, I felt that this was not acceptable for my requirements. When switching from color to monochrome, the screen picture sizes must be readjusted. When the color picture fills out the screen, the monochrome picture will be half screen size until it is adjusted. The Sony controls are in the rear, making them very inconvenient for this operation. The NEC and NEC II have their controls on the front. When making adjustments, insure that horizontal positioning is correct. When first tested, the NEC seemed to have ghosting with the character display. However this was because the screen had wrapped around and required proper positioning. The NEC display was also good. But it was not the equal of Sony in color -- more pastel and less saturated.

Both the Sony 1304 and NEC 3D now have automatic screen sizing when displays are changed; so this should eliminate annoying adjustments. Additionally, both are improved over earlier models. Both would perhaps make acceptable choices for monochrome use on the ST. But I would still think that the Sony 1304 would win by more than a hair if it is anything like the Apple Macintosh monitor. Perhaps a dealer will break one

out for testing when they become more plentiful and prices drop.

Sony 1304s are discounted for around $645, and 1302s for $575. NEC 3Ds are lower priced at $585. The Mitsubishi Diamond scan can be found at $499 and sometimes lower. If the 16" Nano FlexScan is a true multisynch, those who want everything can get it for just under $900.

EDITOR'S NOTE: These prices were for new monitors in 1990; you should be able to buy any used monitor for well under $200 in 1996.

The following should get you started on a switch box so that you can perform your own acceptance testing. I have not tried a Princeton Graphics or Mitsubishi Diamondscan since I felt that their displays with the IBM PC were not the match of the Sony or NEC. It wasn't worth the money or effort for such a change, and a promise was made a long time ago not to compromise and throw money at something you wouldn't be satisfied with. Climbing out of that hole is too costly, and I have paid this price in both camera and stereo equipment -- but never again.

Vertical Synch 12 9 5

Ground 13 1 6, 7, 8, 9

NOTES: Sony 1302, 1303, and 1304 use the same pinouts.
The above can be used for the NEC 3D with a DB-9 to DB-15
conversion cable supplied as standard with the 3D.
ST 13-pin DIN cables with male DIN and unterminated at the other
end and DB-9 plug/unterminated are commercially available.

EDITOR'S NOTE: Try Best Electronics in North America - or, if you have a
broken SC1224, "steal" the monitor cable from it. You will need to add a
couple of extra wires for monochrome use in that case.

The NEC DB-9 to DB-15 converter can also be purchased seperately.
If problems are encountered with the NEC 3D, try disconnecting
some of the grounds on pins 6, 7, 8, and 9.

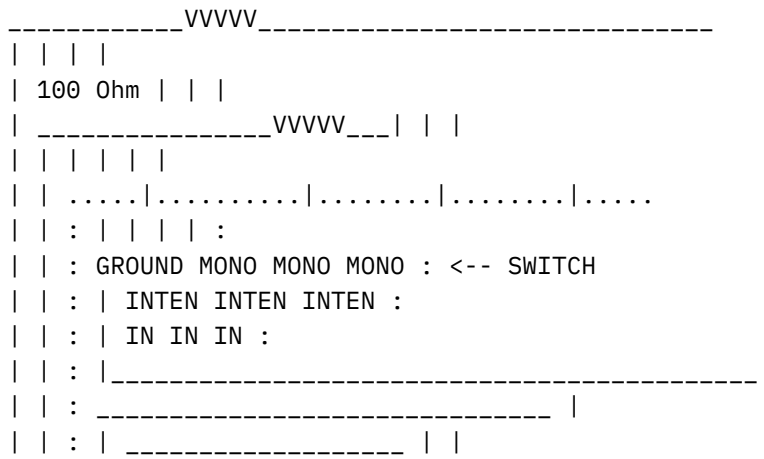
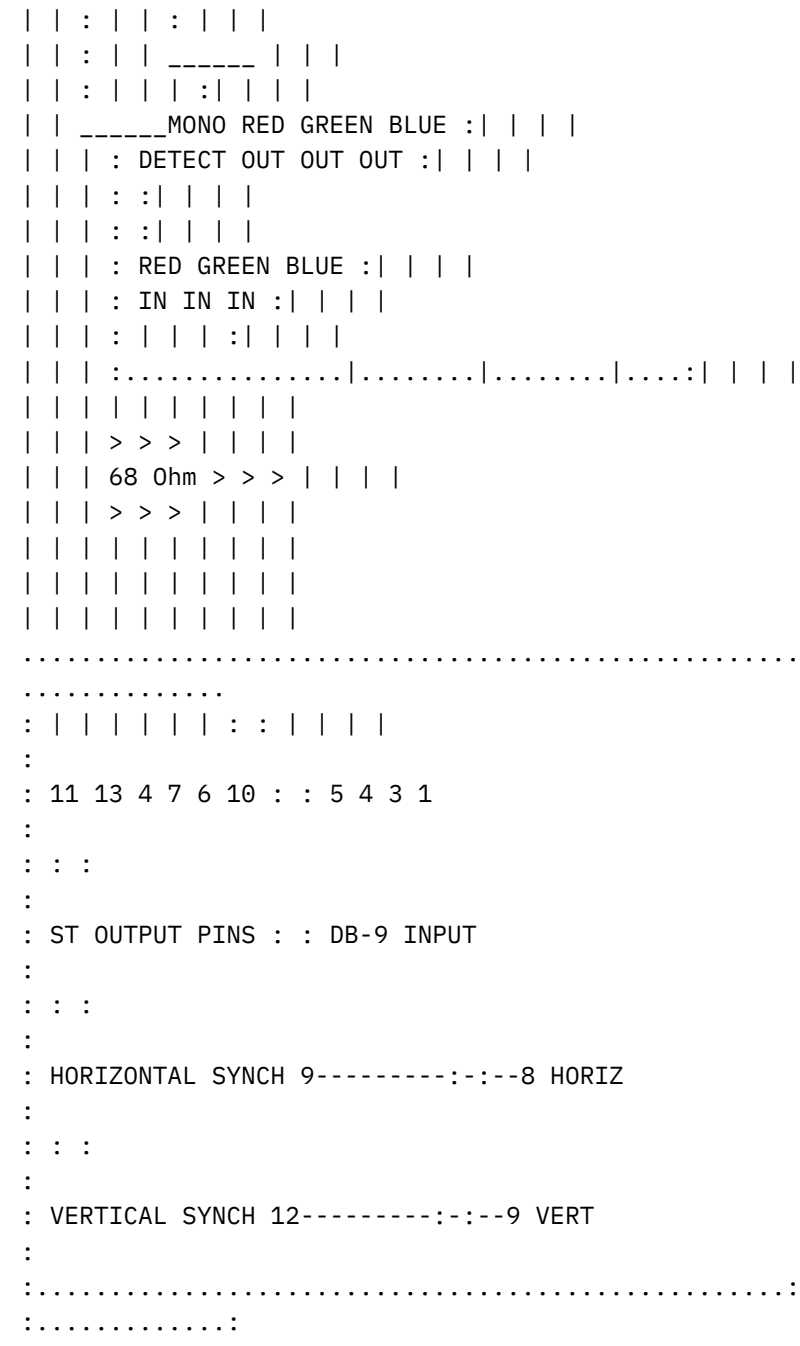
This plug is available in most electronic supply stores. One end is DB-9 Female for connecting to the box's output cable, and the other end is DB-9 Male that plugs into the Monitor or the DB-9 to DB-15 cable for the NEC 3D. The converter has a small printed circuit board with jumper wires to make the proper input/output configuration. The pinouts shown above are for a switch box wired for Sony output and their conversion to output configuration for a NEC monitor.

MULTISYNCH SWITCH WIRING ST DIN 13 OUT TO SONY DB-9
4-POLE DOUBLE THROW ON-ON





Center poles of switch (labeled as RED, GREEN, and BLUE OUT)
are common output to the Sony monitor through the DB-9
connector. When switch is thrown to COLOR side (lower contacts),
the ST's RGB output is fed to the common output center poles.
Monochrome Detect has no output in COLOR. With the switch thrown
to MONOCHROME (upper contacts), Monochrome Detect is grounded and
Monochrome Intensity is fed to the three RGB outputs. Horizontal
and Vertical Synchs are fed straight through from the ST to DB-9
connector. Thanks to Mike Odegard for the original circuit in
file #5617 uploaded in January 1988. It works much better than
my circuit that didn't use resistance.

>even come on #atari are getting into this now..

This can't be sorted on on IRC /because/ of the bots. One of the reasons I don't logon to ais is the damn bots who apparently have been set up to ban me specifically. The few times I have tried, I have found myself booted or denied access.

>All the bots ran on irc are there with the permission of the irc
>operators of the servers they run on so complaining to them that they
>are unothorised will get you nowhere.

Keep in mind that the servers where the bots are running and the servers where the IRC operators/admins live are not necessarily the same servers. It's possible (and I'm not saying it's true, simply that it's possible) that the bots are running in, for instance, Cambridge and the IRC server may be in France, or even the USA, and owned by a completely different outfit than the owner of the server where the bot is running.

>Without Bots on #atari there would be no #atari FACT!

Bull. There's a #atari channel at irc.warnerbros.com as long as someone logs on and creates it - which I do from time to time. Bots do NOT ensure that #atari exists - they only ensure that some people will be banned without human intervention, and that the channel will be maintained without live users. Human ops are a lot more reliable - and reasonable, usually.

If your new modem sends you lowercase "ok" (seems strange to me) you
must cwait 4000 a lowercase "ok" too...

>ATZ seems to send something to the modem (the diodes are flickering)
>but that's all. No dialtone.

What do you mean "No dialtone"? You don't hear nothing, or the modem
sends you the message "NO DIALTONE"? If it's the first, try playing with
the L and M commands (AT L3 M1 perhaps).

>Using the same script with my old modem work fine.

Perhaps the lower/upper case OK response problem, or a serial speed
not recognised by the new modem (my Olitec pocket 28800 knows 57600 and
115200 but not 76800...), or perhaps a special config of the modem is
needed: have you tried an AT &F (or &F1) &W to reset the factory params
then save them to profile 0...

Hope it helps, Bye! Bruno.

TB is running from somewhere in Switzerland and jumps between it's
servers. s0meone is running on mark's computer in Cambridge and is connected
to Warwick university's Europe-efnet server, with permission to do so.

> > Without Bots on #atari there would be no #atari FACT!
>
> Bull. There's a #atari channel at irc.warnerbros.com as long as someone

> that #atari exists

no, that is an indisputable fact, bots by their very nature, will ensure a
channel exists. however the argument presented, (I happen to agree with
Flinny, no bots is a mad idea, but I also have no qualms about removing
s0meone, should there be a serious call for a bot-less #atari), is whether
or not is it worth using up a connection to do so.

> - they only ensure that some people will be banned without human
> intervention,

s0meone does not ban anyone unless a human tells it to.

You're missing the big picture. Why would you uuencode a small amount of text in the first place? The idea behind using uuencode is to transfer BINARY files as text, not to make text files larger and unreadable without decoding. And if you're trying to SELL something, it REALLY makes no sense, because you're likely losing more than half of your prospective customers. I'm always looking for a good deal, but I'm not going to bother decoding a for sale ad, even though I can do it fairly easily.

Is it fair to compare the speed of ST programs running on a Mac under
MagiC Mac (which uses software to emulate many aspects of the ST
hardware) to that of hardware designed specifically for the task?
Probably not. I was pointing out that, as good at the entire 680x0
series is, the same code compiled for each chip will always run faster
on the PowerPC chip. Keep in mind, I LIKE the 68060, but these are the
facts.

I guess they did that to get any ST program to run on the Falcon. I was
thinking of some other stuff that makes it necessary to use Backwards.

I haven't tried this out yet, but does the complied STOS program assume
you are running it from the root of A: or from whatever folder and drive
you run it like STOS basic programs? I'm not even sure how to run Hero
any other way other than on a floppy without the hard drive on.

Whats this, a new favorite games thread ??? nice:)

OBSESSION : IMHO is the best game ever made on any ATARI computer, screen use, playability, graphics, sound,it has the lot,
The first time I saw this game I was mesmarised, I could not believe this was running on a humble one meg STe
I doubt I will ever see any game again on the ST that stretches and uses everything possible like this, superb :)

Cheers.............!ynoT

both Arnel and Tach told me that they told Stosser on numerous occasions, as
I say I don't log the channel, so I'm only going on their word.

Hi,

I have just uploaded precompiled version of the latest Linux kernel -
2.1.13. It's compiled for 68040 with IDE and SCSI support built in. The
file is named lin2113.lzh and is at ftp.zlin.vutbr.cz/pub/atari/linux.
You can give Linux a try with my linux040.lzh file and replace that kernel
by this new version.

Hi There,

I have the following Atari hardware for sale :-

Atari Mega 4 ST
Atari SM124 Mono Monitor
External 3.5" Drive

Various other bits and pieces Joysticks, Mice, Null modem cable ETC.

Some software including GFA basic complete with manuals.

All this could be yours for the bargain price of £150.00.

If your interested drop me a note at hallnc@netcomuk.co.uk.

I have VIDI-ST, ver 2.x?, and I use it to capture video from a camera live,
or from any video source. It's not in true colour, but it's in about 8
colours, with a range of pallettes selectable. With an STfm or STe, you
can output directly to video, with some interesting special effects. Or
capture the screens, save them as NEO or PI1, import them into CyberPaint,
and really do some FX!

>

I can now see the Star Trek site perfectly fine now - but I'm sure I couldn't
a week or so back (_WITH_ CAB.OVL 1.20h).

They may have had complaints about incompatability (after all -
Paramount would want _good_ publicity about their sites surely!)

As for the Atari site, I notice from their HTML source that their pages
were created with Microoft 'Front Page' (is it?) software and I hear that
has caused several problems in the past (?)

Can anyone confirm ?

Regards,
Andrew

(about the MagiC file selector)

>No. When it's impossible to change a file mask in a file selector or to do
>any moves, copies, renames, file-finding etc it becomes a case of it being
>completely inadequate.

While most of the above is necessary using ordinary TOS, if you're
using a multitasking system, why not just switch back to the desktop
anyway?

While I agree with some of what's been said re the MagiC selector
(particularly the file masks issue), expecting it to do all the above
seems like a waste of system resources to me when you already have a
program in memory that can do the job.

The one thing I really miss is a feature of the Harlekin selector
which AFAICT even Selectric doesn't have, ie remembering the last few
paths you selected so you can shortcut back to them without having to
do a lot of repetitive navigation. I don't mean manually saving preset
paths: the Harlekin selector also keeps track of your travels on the
fly.

IMHO and everything,

John

This is childish of you! Just check your own list:

Norway, Sweden, Denmark, Finland: I know many people in these states
and most of them di understand enough German to read documentations.
Anyway, except in Finland the laguages are so similar it is possible to
read the others.

England, USA, Canada, Australia: Allright, they do indeed speak English!
:-)
But tell me, how many Atari users are there?

France: Silly situation. Many French do learn German AND As France is
one of the "we-support-Atari" countries there is lots of French
documetations.
At least I found a lot.

Japan, Mexiko, India: Allright, your point. But tell me: how many of these
people do understand English? Probably more than German, BUT how
many of them are Atari users???

Poland, Slovenia: Don't be childish! In these countries people learn
German
rather than English! Most people there do understand German preety well,
but do not know a word of English! In Eastern Europe German is more
than English the common language! This one goes to the German side!

Yes, English IS the international computer language!
BUT in the Atari world it is more German and maybe French!
I agree it is not possible for everyone to adapt, but what can we do?

4007. Help : how transfer midi files from atari to pc ?

: Anyway, is there an English version of MagiC?

Yes, the programs itself were translated to UK English.
Unfortunately, the Behne Brothers corrupted the manual by replacing the
correct word "colour" by the ugly "color". So the manual is a mixture
of UK and American English.
BTW: There is also a French version.

I agree to a certan point, however I would love to get my hands on
one, I would love to program a game, or maybe take some of my existing
ones and give them the kick up the backside that the Falcon would
allow me to do :)
Atari has zero support for it?, well isnt that allways the case? I
had a fm and now UPGRADED to an STe and ATARI never actually supported
me,

>ground soon, I could give it to someone with a Falcon to test it. All I
>can do is fix it(if STOS) and use correct TOS calls for some routines.

Ho dont be shy, you can tell everyone its STOS Eric :)

>> Then when you do manage, you will get people moaning that they need
>> backwards,

>The Falcon and TT were never 'ment' to run ST games. You have to getfix
>programs and run at 8Hz. Ever that or don't play, it's that simple
>people.

"they" dont have to fix programs no more, my latest (DIAMOND-ICE)
should run without problem, the next will be as compatable, but maybe,
just maybe? wont even need backwards, you see STOS is to be upgraded
yet again, so not even backwards will be needed next :)

>> on line, had no contacts and ther's nothing in the programming manual
>> on the subject,

>I think you can fix this just be not including the A: in the filename and
>path. In STOS, I'm in the folders that I run the program from.

heheh not quite that simple, but the fact that you are running my
software from your hard drive surely means I already figured it out
mate :)

>Still, I can get around this by using Psygham and Divert...no biggie. :)

no biggie and no littlie anymore, sorted :)

>> I have been publicly told that this is a "lame" excuse,

>Cuz you weren't on-line or have a power computer setup? Those people were
>full of it. :)

not "were" but "are", this was last week mate :(

>BTW Tony, I think I know why I have some problems with Heartland and even
>Hero. With a hard drive, I have much 'less' memory why really rots :(At
>least I'm getting more memory soon, say way I got the hard drive...CHEAP

ho yeagh, you see heartland is a one meg game, and it really is, it
needs at least 900k to run, cant recall with HERO, but very memory
hungry,

DIAMOND-ICE, well that needs one meg-12k, anyone with diamond ice and
one meg would have to run from an auto folder or they would not have
enough memory, try pressing the "W" key on the diamond-ice menu screen
and it will show your free memory, theres not much change out of one
meg mate :), if your going to make a game that uses just over half a
meg, you may as well use the lot and make it shine?

so have you tried diamond-ice, ? waddaya fink, not many comments
flying around:(<smile>

Q1. I am on a freenet. I can download via the www using lynx but
cannot use ftp to download. Are there www links to sites other
than UMICH?

Q2. I was searching the files at UMICH for hardware hacks, but there
was no specific section for hardware. Do these files- hardware
hacks and modifications- live at any specific site?

Q3. Broken record time (sigh). I know I have seen discussions about
modifying the st (in this case a 520) in order to use it with
a VGA monitor... I thought I saved the thread but can't find it.
Does anyone know where I can find the FAQ on this? My impression
about this particular hardware hack was that the st was modified
so that it could accept monitors that couldn't sync down to 15.75mhz,
for low/med res, or 31mhz, for high res. Does this sound familiar,
or more like wishful thinking?

Thanks to anyone that responds. I know this same question coomes up every
month or so... but I just can't find where I put the discussion files or
didn't save them when I thought I did.

Bob

Yes, I have the same problem with some pages since about 4 month. I
think it is a problem of CAB and some servers.

When I get the pages at work with Netscape I get all pictures of the
pages. At home with my Atari Mega St4 I only get the text and the 69
byte message "404 Object not found".

Sorry about this. Can someone help?

Well... actually, *my* german is good enough to use non-critical software.
I have even translated some software myself... (My French is better than
my German though...) I was referring to the majority of people who do not

>Yes, I see that point. But the reverse is still true for germans using english
>software.

Yes, true - but there isnt such a huge problem there, as most of the good
software comes from Germany anyway...

>The only way to change that is making the german software authors
>aware of an big enough english market for their software so they think it's
>worth the trouble writing english documentation. It's not as easy as it looks.

Yea, translation isn't that easy, but not impossible - especially if you get
someone else to do it...

The problem with convincing German authors that there is an English market
is that the programmers responsible will be unlikely to be reading an
English speaking newsgroup, but rather the maus groups which many of
us do not have (easy) access to. [eg. my News server does not carry them]

>If you have trouble understandig german only software,
>ask me, and I will try to explain or translate.

That is very generous! Thanks, but the problem is eg. if your
hard disk driver gives an error message, and your machine refuses
to boot, what do you do? If you understand the message, you might
be able to do something about it. Obviously you can post here (if
you use a different machine for net access :) but this is not idea.

A less extreme example is when using copy functions of a desktop,
it queries about overwrites. What if you didnt understand the
message, and so just hit the default button? (most people pick
up that Abbruch means cancel, but if you dont understand the
message...)

As a lot of system software (most replacement OS's, hard-disk
drivers, system enhancers [eg. NVDI] etc.) are German, and the
up-to-date versions are only in German. With this sort of
software, an error message might be important...

Actually, the Falcon was, I believe. They crippled the Falcons bus trying
to make it STE compatible... (the bus is by far the slowest part of the
Falcon, and this is because it has only a 16-bit [STE compat] bus between
the CPU and the rest of the Falcon.)

>I think you can fix this just be not including the A: in the filename and
>path.

No, drop the A:\ from the filename...

Having looked at the Hero source code, I can tell you that Tony wasn't using
A:\filename.ext but was using \filename.ext which is why Hero works from
the root directory only. Of course, no one with a hard disk would try
this, so would just assume that it wasn't HD compatible...

It's a saying, one that's used all the time in my area and presumably used a lot where the poster lives, anyone reading it really should not take it to the exact letter?, this and many other newsgroups would be in a shambles if everything was taken too seriously :) IMHO

EG. "Look at the dress she is wearing!, It's downright criminal" :)

Yea, I guess it could be read that way. Sorry if I offended anyone,
but around here that is just slang to say it is not good that it
is the case - I am certainly not saying that the programmers are
criminals for not writting english versions. :-)

>>that there is so much German software out there that many of us

well, for commercial software (we are talking about this, I assume?)
its a bit difficult to do this, as even if someone translates the
program they cannot (legally) distribute it without setting up lots
of stuff (like distribution rights etc.) which I cannot see happening
in many cases... ;/

s0meone, which James and I run, is on there because most of the regulars on
the channel wanted it to be there. It's running with the consent of the
owner of the computer it's on (me) and with the op of the server it uses.

The only thing it does that people have found annoying has been the
"revenge" mode where it deops people who deop or kick it or other bots.
That's no longer enabled despite being a useful feature in some cases
because of the trouble it's caused.

Of course it bans people from the atari channel. It bans people who the
human ops want banned, no more and no less. What's wrong with that?

>you would not be pleased at some other bot then kicking you off again,
>it aint funny and I do not see how ANYONE has the right to kick me off
>a public channel?, especially when I did not deserve it!

What actually happened is that when you rejoined the channel, TB
replaced the ban on you. s0meone responded to this by kicking you, but
had it not done so, TB would have done so within a second, so I don't
think you can really say s0meone did much wrong.

> bots got annoyed ?..hmm I think I know what you mean:)

Well yes, they don't "like" being deopped. s0meone would (now it doesn't) and
TB still does try to take "revenge".

No it doesn't make it alright. Fortunately whenever it's happened to me
there were human ops on the channel who could sort it out, but if there
wasn't I'd have been in the same situation as you were.

> hahaha a ban I think you willa dmit, I did NOT deserve ?

No of course you didn't, any more than any of the many other people who
have been caught by it did.

>place, which in turn makes the point a little mute?, it hardly changes
>the stupid situation of someone doing nothing wrong, getting banned by
>one bot, then repeatedly kicked by another?

Every time s0meone kicked you, it was immediately after TB had placed
a ban on you. s0meone didn't hold anything against you, it just kicks
everyone who is banned by another user whether it's a human or a bot
who places the ban. You can't blame s0meone for that, blame the bot
that kept on placing the ban, TB.

Hi all,

I am not experienced enough in programming the ST to know whether this is possible.

But... this whole thread could be resolved if someone wrote a "memory defragger":

The same idea as a disk defragger but for memory - when the largest free block
of memory becomes too small to do anything useful with, this utility could be
run (in single-tasking mode?) to move all running programs into contiguous blocks of memory, thus creating one large free block made up of the previous
memory holes. Obviously if there is not enough room to load the memory defragger
the machine will have to be restarted or another program terminated - a way round
this would be to have the memory defragger loaded all the time either as an accessory
or as an integral partof the system.

A memory test program I have claims to be able to move itself about in memory to
test the area it was loaded into, so maybe it is possible to move other programs?

Another next best alternative would be a utility that showed the order that programs were
loaded into memory (rather like the No Sort View option in some desktops). This would
allow you to unload programs in reverse order, thus freeing up Ram as efficiently as

possible.

I suspect there is a multitude of technical reasons why these things are
not possible,
but if not will we see it in Geneva release 006 ;-) ?

Michael

I presume you have thought of transfering them by floppy?

You can transfer files between an Atari and PC by using a
program called Ghostlink. This allows you to transfer files
over a serial cable.

I'm not sure where you will find Ghostlink, try searching for
it at http://www.filez.com

Yours,

Ben Hills.

Hi Atari family... I'm looking for:

1. A hard Drive, ready to go for my 1040/Mega 2st

2. A sound program so I can play and put samples on my web site. (Replay or something like that)

3. A color video program so I can scan, or shot, or what ever you do to get color pictures files on my computer to place on my web site. It would be nice if I could also do video clips... but that might be asking a bit much.:> (VT something or another)

There's a few other things but I just can't think of them at the moment... I you have something that I could use to do what I'd like to do... Please let me know. ThanX

However, they ARE quite compatible with 720 DSDD formatted PC disks,
which makes things rather easy in most cases.

>
>Thanks for any info,
>Lloyd

Lloyd,

You could probably find a used copy from someone here or you
can buy brand new copies of FTL's games from them. Yes, they are still
in business (at least they were about a year ago) though they're
operating under a different name. They're new name is something like;
Heaven's (something or other) Games. They're based in California. I've
got their phone number and address around here somewhere. I will try
to find it for you after my house is done and I start unpacking. We're
planning on moving in on Dec. 21 so it'll be sometime after that so
please be patient. If someone else hasn't helped you and I haven't
sent you info by the first of the year, email me and tell me to get
off my dead butt and find it.

Sincerely,
- Byron Followell
followel@sprynet.com

P.S. - When I talked to them last year they were supposedly working on
a W95, full blown multimedia (whatever that means now!) version of
Sundog. They said it would be like a cross between Sundog & Privateer,
only more advanced! Vaporware? I hope not!

I can now see the Star Trek site perfectly fine now - but I'm sure I couldn't
a week or so back (_WITH_ CAB.OVL 1.20h).

They may have had complaints about incompatability (after all -
Paramount would want _good_ publicity about their sites surely!)

As for the Atari site, I notice from their HTML source that their pages
were created with Microoft 'Front Page' (is it?) software and I hear that
has caused several problems in the past (?)

Can anyone confirm ?

>documetations.

But the level teaching usually does not include technical language,
such as is often used in computer documentation - particularly for
the sort of programs that we are missing out on (latest Magic, N.AES,
HD-Driver [is this translated? I dont know, but someone else said no])
which all are highly technical in nature, and are NOT suitable for
the average joe user to run with a half understanding of the docs.
(As a final year computer scientist, and 5 years of German lessons
I think that I can probably cope with most of it, but the AVERAGE
USER cannot, IMO)

This is just plain impossible. Once a program has been put into a certain RAM location, it has to run at that location from that point on. It can't be run at any other place in RAM.

I've never encountered any platform where this was possible, mostly because it makes programming next to impossible.

Some of the more technically-minded people here might start talking about virtual memory, but that is really not the same thing as what's being asked for. You still have the same fragmentation problems with VM, only the fragments are much, much, bigger.

Cab has recognised binary files itself for a few versions now.. it
detects that it is a binary file and gives you a file selector to save
the file out. Even easier since you dont have to set it up :)

This should really be sorted out on irc and not here.. People who dont
even come on #atari are getting into this now..
All the bots ran on irc are there with the permission of the irc
operators of the servers they run on so complaining to them that they
are unothorised will get you nowhere.
Without Bots on #atari there would be no #atari FACT!

"Worst fit" can actually be as effective as "best fit". The idea is that
if you use "best fit", the remaining memory-block might be too small to be
useful. With "worst fit" the remaining block will be large most of the
time, hence more useful.
:
: But... this whole thread could be resolved if someone wrote a "memory

I don't think this would be possible with TOS. The code itself has to be
modified (Unless it's 100% PC-relative that is.) when you move it, and all
references to dynamically allocated blocks must also be changed. Since you
can't possible know what points to dynamically allocated block you're
lost.

I think the best solution would be paging, with the paged/virtual memory
installed as extended ram. It works quite well with MiNT 1.14 (I'm told, I
have a Falcon so I don't know.).

You're right, VM itself has nothing to do with fragmentation. Paging does. As a virtual address-space consists of a chain of pages (The pages can be placed randomly in physical memory.) there will not be any external fragmentation. The internal fragmentation is ~1/2 of the page size pr. allocated block.

VM (Demand paging.) is just an extension of paging where the address space is extended beyond the physical memory. Pages are then swappen in and out from disk as needed.

You don't have to use VM even if you use paging. Plain paging would probably work fine with almost all software, as nothing is moved after it's loaded/allocated.

Actually, CAB wil download files linked to Web pages, so you won't
probably have to hassle with MG-FTP (which has a major bug having to do
with how it finds its RSC file). I don't remember which version of CAB
made the whole file downloading thing easy-as-pie (just click the link,
wait for the file to download, your file selector appears for you to
choose a path and name to save the file as). Some early version would try
to display the file. You can circumvent this behaviour by telling CAB to
launch a file decompression program when it encounters e.g. .ZIP or .LZH
files. You do this in the "Helpr Applications" dialog. If you have any
trouble with this, drop me an e-mail and I'll go into further detail.

4040. Atari Mega ST & MIDI system -- Needs a new home

Newsgroup: comp.sys.atari.st
Date: 1996-12-04 00:00:00 UTC
From: Rob Bushkoff <robb@nmm.ultranet.com>
Message-ID: <01bbe210$0bec24c0$1661e8c7@zeus>
Source record: 132707

I'd like to find a new home for my Atari ST system. The system works fine, but I rarely use it and it's taking up needed space in my music area.

I have:

* Atari Mega ST2 Computer with keyboard and MIDI
* Atari SH204 hard disk drive
* Atari SM124 Monochrome monitor (so-called "high resolution)
* "Multi-Switch" -- adapts Atari ST to use multi-sync type monitor
* Dr. T's KCS Omega Midi sequencer software (recent version)
* Dr. T's "The Phantom" SMPTE synchronizer
* additional Dr. T's music software, including T.I.G.E.R., T-Basic, MT-32 Editor
* "M" MIDI interactive composing & performance software
* Steinberg/Jones Pro-24 sequencer (old version)
* Much additional general-purpose software including: Easy Draw, CAD-3D, Word Up, Mark Williams C, MIDI-Draw, etc.
* Several Atari mice, joysticks, and a trackball.
* Numerous books and related literature.

I have most boxes and manuals, but I'd hate to have to pack it all up for shipment -- that will cost extra. Come to my place northwest of Boston and take it all away for $325. I'd have a hard time refusing any reasonable offer.

Contact Rob at -- robb@nmm.ultranet.com

]
]
] Peter Ross

Hi Peter,

I have a copy if you want it (beta or demo I think). The interface is a lot nicer but it could still do with a better ANSI emulation and a TTY or plain ASCII terminal emulation...

I am also a registered owner of CoNnect but I am using Starcall more and more these days because the ANSI emulation is better (even if the overall interface isn't), and it does a good ASCII terminal (for the UNIX box at work.

Also, Starcall doesn't crash when using Alice (iconiser), whereas Connect does (sometimes) OTOH, the CoNnect sound is a lot better...

>This should really be sorted out on irc and not here.. People who dont
>even come on #atari are getting into this now..

I disagree.. this is a platform which everyone who may wish to visit
#atari can participate in without missing some of the arguement because
they were not on line at the time, IYKWIM.

>All the bots ran on irc are there with the permission of the irc
>operators of the servers they run on so complaining to them that they
>are unothorised will get you nowhere.

I think they may if they are being misused and certainly if they got
enough complaints...

>Without Bots on #atari there would be no #atari FACT!

Oh come on, that is a joke surely? If not that I apologise but you are
mad Flinny my good man! In fact, as far as I am concerned, while the
Bots are on #atari there is no #atari - certainly for me!

I don't want to hear the crap that without bots the channel is taken
over. Who really cares if it does anyway... noone OWNS a channel! Oh
boy, no wonder the peopel on #atari are split. Great! Now we have a
split WITHIN our own little community. Now when did this start... aha,
teh recent bots!!

Sod it, Im outta here I have important issues to attend to and a life to
lead, this is "supposed" to be a bit of fun on the side.

Time to stick my 2 cents worth in here! Read that last statement over again. When you write a program in German you get more users in Germany! Did you expect more users of a German language program in Spain maybe? I remember a great big controversy about kellis translating a rsc file for a program and getting jumped all over for it! I will admit that she should have got in touch with the Author first. I have NVDI4 and they totally forgot to translate the ASSIGN program and associated files, kind of hard to figure out how to use it "properly" when you can't read the docs! This problem is why a waited so long to switch from Warp9 and Speedo5 and why I still use the ICD utilities, even though CHBD is supposed to be better! If you don't understand the docs and can't read the error messaages and dialogs that pop up when things go wrong, you don't use it on your hard drive! There is just too much chance of totally trashing it!

>
>>A software-author would reach a much bigger crowd with at least having
>>their software in English (as more people understand English than say
>>German in the world).

They could at least accept help with translation when it is offered!

>
>much bigger? How much more; say in users...

Everything after expenses have been met is profit! All sales outside of
Germany could be considered extra profit for the Author that takes the
time to translate the software or allows someone else to do it for him, if
he either doesn't feel capable of doing a proper job of translating or
doesn't have the time!

>No, i think not. But you are right; english would be understand in more

Yes, I do. I use a lot of German software because it is among the best software I have. I have had to acquire as much German as I need to use it, and believe me, if I can do it then anyone can.

While I would like there to be translations, I am frankly grateful that there is so much *very* good stuff for my TT (which, after all is a platform no longer being made - with the exception of the clones). In particular I think that were it not for the advent of MagicMac and MagicPC (is that right?), then our atari systems would be smallish boat anchors by now. MagiC is a fine product. It is German. NVDI is essential. It is also German. So much stuff coming from Germany graces my machine, I shudder to think I might have to use a PC (boo) if I didn't have the German stuff.

And CoMa (even if I *am* having a problem with the new modem...).

So for all our friends in Germany (and Sweden and everywhere else), English translations would be nice but I am not going to slag you off if you don't do them. I will learn more German. Or some Swedish or whatever.

Just my two pennyworth :-)

ps. Any chance of an English rsc file for 1st_million Siggy? (duck) :-)

g> If there is enough memory for Papyrus to load then it has the potential
g> to use all fragmented blocks - it only has to ask.

There isn't enough memory for Papyrus to load, in the example described
above. I'd have to reset to stand a chance...

>> Sure - that wouldn't be a problem. But with 1900k free here I can lose
>> 800k just by starting and closing one application - that's too much.
g> You'd have to run Papyrus and make it run out of memory. Then look at
g> the program manager - if that 800k block is still free the Papyrus
g> startup code is being particulary stupid.

In that situation it would find the RAM - what little was left...

>> <SNIP>
>> I'm running CAB v1.5 ('030), CAB.OVL v1.20h, STiK v1.12 on 4M Falcon.

>You might want to try an older CAB.OVL...
>I had problems with v1.20h on my Falcon...
>
>Brian

Hi Brian,

I apologize in advance for being a Usenet HOG on this topic, but in an earlier followup post I stuck my foot in my mouth and I'm desperately trying to get it out! I should have checked things out thoroughly before I posted a message.

Andrew was unable to download site http://firstcontact.msn.com/
With his setup he SHOULD be able to see it OK. In this case CAB.OVL(1.20h) displays fine and CAB.OVL(1.18) doesn't. I quit using 1.20h because I've had trouble downloading zip files and 1.18 seems faster.

I understand that the CAB/STiK developers are working on a new OVL :)

Unfortunately, none of this helps Andrew, the original poster ;)
Whether his problem is busy phone lines, STiK defaults, CAB conf's or something else, I don't know...

For those out there who would like to TEST their CAB/STiK setup. Try connecting to www.word.com and going through the links(WARNING: This site might be "R" rated by some, but was listed as a TOP 10 in graphic design).

In www.word.com/gigo/kittens/ there are some compressed JPEG's. If you can view them---Kudo's to all.

Newsgroup: comp.sys.atari.st
Date: 1996-12-04 00:00:00 UTC
From: jabeecher@aol.com
Message-ID: <19961204062100.BAA25147@ladder01.news.aol.com>
Source record: 132761

Although I have gotten excellent response to previous requests, I still need more STs.

Wanted: Older 520s, 520FMs, and 1040s with RF modulators. The computers will be used solely to play huge games of MIDImaze 2 at local game conventions, so low-memory pre-simm computers are fine. Computers with bad disk drives are acceptable as well.

Also looking for color monitors in working condition.

P.S. Does anyone have any information on a maze editor for MIDImaze *2*?

Please *email* me at:

jabeecher@aol.com

Thank You.

I would like to see support for the Connectix QuickCam even the grey scale one via the LAN port on MegaSTe, TT, and Falcon (hopefully interrupt driven). Also, I wish someone could make a driver to transfer packages to and from an Atari to the Apple Newton and perhaps a utility to allow synchronization with CalApp.

4064. Order of TOS 1.4 chips, what goes where.

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <022c0079$68ec8aa0$6204a4c6@BAC0096.ci.umoncton.ca>
Source record: 132516

I got a series of TOS 1.4 chips from a friend and need to know the order in which they go. The TOS 1.4 chips are labelled H0, H1, H2, L0,L1 and L2.

The sockets under the power supply are:

U4 U5
U3 U6
U2 U7

cartridge

I lined up the TOS 1.4 chips as folows

H0 L0
H1 L1
H2 L2

The notches were properly alined. The drive light comes on but nothing comes up on the screen. Perhaps the chips are bad. If so can anyone tell me the order of the original TOS 1.0 chips I didn't take note when I removed them (I was hoping the TOS 1.4 chips would work).

the TOS 1.0 chips are

150 153
151 154
152 155

Is this the correct original order?

Thanks

Alyre Chiasson

4069. German only programs - my two cents

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: death@fletch.fix.net
Message-ID: <588ipc$904@fletch.fix.net>
Source record: 132521

I will tell you what, I use my TT (16/2 850meg HD, scanner, Nova) everyday for everything from access to my internet account, to keeping a customer database, to publishing a 100+ page magazine (quarterly) and I would absolutely love to have access to some of the german only software out there. I use Calamus daily (German, but translated) Outline Art 3.0 (same), but I have found many other titles I would love to check out, but the demos are next to non-usable for me.

Do I have time to learn German? No. Could I if I wanted to? Yes. Would I be more apt to buy the software if there was at least an English .rsc file? Yes.

I just downloaded a piece of software called 'Artworx' and it seems pretty powerful, but I just can't do enough with it to tell if it's worth buying (If I could even find someone to purchase it from). The demo date is 2/96 which shows software development is ongoing in Germany (as evident with Magic, NVDI, HDriver [I own this, thanks Uwe :)]) so what are we as the Atari community going to do about getting this software for us to use too?

This is something that needs to be SERIOUSLY addressed! Collectively, with the people who regularly post (or read) to this group, we should be able to figure something out!

There has to be some way of getting documentation, .rsc files, etc. translated! If we, the people, who have stuck with our atari's this long can't figure something out then more and more English only speaking people will desert the atari world forever!

If a new program like Photoline can be had in English then others should be too!

I am sorry if this post is somewhat mixed up, but I am in desperate need of more advanced graphics programs for the machine that I have sunk my money into!

I would even be interested in sinking money into an international fund to have some group do at least basic translations of documentation and .rsc files...

Well, that's my scrambled two cents :)

Well it is the latest version of Connect which was announced for 95 -
do other software manufactures produces programs with a version number
95, too? This was new to me. It still runs on things that behave like
Ataris (the originals are no long very common;-).

The main problem with Connect95 currently is: it is available in
German only as the English translation of the RSC/ASC/HLP files is not
finished. I am working on that in my (non-existing) spare time.

Wolfgang

No, it was an (very bad) excuse from Atari for an 16 bit bus in the Falcon. There is no way software can see the bus width it's running on. There are no problems with software on a TT caused by its 32 bit bus and 64 bit (Yes!) video hardware. The main problems with a TT are its 32 bit adresss space (instead of a 24 bit), the 68030 processor and some missing hardware registers. From the compatibility view the falcon is (IMHO) worse: Many compatibility problems come from the missing shadow registers of the soundchip and even more missing hardware registers. Especially the missing Syncmode register will cause a lot of problems.

> *2*?

Yes, you get one when you pay your shareware fee, together with a nice
T-shirt. To use a maze created with the editor the master computer needs to run
a registrated (non shareware) version of midimaze II. A slaves can use the
normal version of midimiaze.

4078. Repost Emulator Instructions.

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: Ben Hills <ben@imperial.co.uk>
Message-ID: <32A6EB07.643C@imperial.co.uk>
Source record: 132570

Hi All,

Due to the amount of E-Mail I have been receiving about my "How to get a working Atari Emulator running under Windows" postings, I have decided to re-post the instructions.

So, here goes.

In order to obtain a working Atari Emulator you will need the following files:

Gemulator 96 Demo from -

ftp://ftp.pulsar.net/pub/Stumble/Other/AtariST/Emulators/gem96dem.exe
This is the Emulator you will be using.

Magic PC Demo from -

ftp://members.aol.com/ashftp/demomapc.exe
This provides and Operating System.

Teradesk Desktop Replacement from -

ftp://ftp.cnam.fr/pub/Atari/Desktops/tdsk140a.lzh
This provides a GEM Desktop

Once you have these files you will have to do the following:

1. Unpack the Gemulator demo into a directory (I use C:\GEM)
2. Move the files sthdboot.sec to the root partition of the drive you are using.
3. Unpack the Magic PC Demo into a tempory directory.
4. Move the file called magic_pc.os to the root directory (like sthdboot.sec)
5. Unpack Teradesk (tdsk140a.lzh) into a directory (I use C:\GEM\TDESK).
6. Load up a text editor such as Windows Notepad.
7. Enter the line #_SHL C:\DESKTOP where DESKTOP is the path to Teradesk, e.g.
#_SHL C:\GEM\TDESK\DESKTOP.PRG and save this file in the root as MAGX.INF
8. Startup the Gemulator.
9. From the Options menu select First time Setup.
10.Click on the box next to Search for MagiC and then click on Search.
11.It should find MAGIC_PC.OS. Click on Close. The Virtual Atari will now boot
12.Keep your fingers crossed.!
13.Use it for a bit.
14.<<<IF YOU LIKE IT, GO OUT AND BUY THE FULL COMMERCIAL VERSION.>>>

If it should fail to boot press F11 to bring back the Windows Pointer arrow.
Press the Right Mouse button to bring up the menu. Select the Properties option from the Options menu.

Make sure that the Boot Disk is set to the disk the Gemualtor is running from.
Make sure Quick ST emulation is not selected.
Make sure Atari disk mode is not selected.
Make sure that the Memory is set to as high as it can go.

For More information on the Gemulator point your browser at:
http://www.emulators.com

For More information on Magic PC point your browser at:
http://members.aol.com/ashinfo/index.htm

Good Luck.

Yours,

Ben Hills.

The reason is quite simple: Partition sizes are limited by the GEMDOS
version, regardless of the hard disk driver or format utility you use.
BTW, with TOS 4.0, MagiC or Big-DOS partitions up to 1 GByte are
allowed.

Very true !!, I should have been more specific, since AHDI can format
without partitioning. You may be onto something here with the AHDI
configuration program.

Well, in some respect it is possible with a PMMU (i.e. real 030er or
bigger). You can at least defrag pagewise. The point is, that it would
take quite a time to optimize some 128MB Ram a TT can use.

> I've never encountered any platform where this was possible, mostly
> because it makes programming next to impossible.

It doesn't influence programming more than Memory-protection. If a 68K
is used it does influence Programming a lot, but with a PMMU it is
possible.

s/don't/didn't/

check the s0meone control file where the amount of logging is set and note the "CHANGED" comment and the date. I added the "p"ublic logging after the second incident, irritated that I was hearing the detail of problems on comp.sys.atari.st. I've removed it again, as I still don't like logging "p"ublic stuff and I kind of doubt there will be many more s0meone-related troubles in the next 48 hours.

I have a DiiMo 50mhz 040 with a 128K cache installed on a Quadra. It
benches
as fast or faster than PowerMacs with Speed Doubler, especialy in the
disk
access department.

> >

> > running circles around it.

I've been asking around and I can't find anyone who has installed an 060
in their Quadra. I'm sure it can be done, and you would then have a Mac
that would outperform PowerMacs by quite a margin when utilizing 68K
softs.

> >
> > Christof

>
> -Michael Ellis

Turn up the gas:) I for one think it is. Most of the Mac vs 060 machines
post here are also due to the users wish to continue utilizing TOS
compatible
software, for which there is no native PPC versions available as of yet.
Most all (99.9999%) wish to stay with their currnet software and not
have
to restock the library. The 060 is a perfect choice. The slightly higher

cost of the 060 machines is easily offset by utilizing currently owned
TOS software. Sure the PPC with the proper code is superior (or I
should
say will be when you can buy Be OS and Win NT for it at Walmart).
So for TOS users, the 060 is the smart buy.

> a HUMAN been the ops, then he/she would have let me back on, what bit of
> that dont you understand?

a "HUMAN", presumably wouldn't have banned you for "atari sucks" in the
first place. the problem here with your "right to be on the channel" was
caused by TB, _not_ s0meone. If TB had not banned you and kept banning you,
s0meone would not have kicked you. "What bit of that don't you understand?"

(you do realize, of course, that TB would have kicked you if s0meone hadn't?
It's just that s0meone (not being tied up monitoring the channel for ``bad
words'') got there faster)

> > have admitted), either someone gave you the wrong information or you
> > misread it.
>
> This seems to be an important point with you?

yes it was, I don't being appreciate being flamed for the actions of a bot
which is not mine.

> alright you have been told by 2 people that they told me the correct
> names, but put them amist the people who told me incorrect or unknown or
> umm arrs, and add to that being constantly kicked while asking by your

> annoyed to say the least, then thats where the confusion lies, I already
> apologised both privatly and publicly for putting too much flame your way

> when you only IMHO deserved part of it, NOW WHAT BIT OF THAT DONT YOU
> UNDERSTAND?

why does everything boil down to "don't you understand?"? does everyone have to agree with you or they "don't understand"? my point was that a) you were definitely at some stage given the right information, b) s0meone was only kicking you as a direct result of the highly questionable actions of TB.

> before you appeared here or on #atari?

no, IRC was restricted (time of use, etc.) when I started at Bradford Uni,
it was banned totally later on in the year (I think about half way through
or so, but I'm not sure). however, s0meone runs from a computer in
Cambridge, it has no connection with Bradford Uni. I IRC from somewhere in
Sweden, not from Bradford Uni (it is, after all and as you have pointed out,
banned).

4089. Re: German-only software: why? views on this anyone?

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: Michael Grove <mgrove@ridgecrest.ca.us>
Message-ID: <32A693D3.2C83@ridgecrest.ca.us>
Source record: 132581

All I can say is that I am very greatful
for all the German software, in English or
not. I have several commercial apps and
a disk full of shareware/PD/demos with
German RSC's and Docs.
I have purchased a few German to English
dictionarys, have a few German e-mail pal's
(Hi Robert:) and after a year I may not be
able to read the document word for word, but
I usually get the general drift. As far as
the applications go, take the time to experiment.
Don't expect to be an expert user overnight.
Eventually you will find that the same "words"
are used in almost all app's menus and you will
notice it takes no more getting use to than
remembering how you have your keyboard macros
set-up :).
When you try to tackle an application such as
CHBH (or whatever) you should at least have
a good idea of what hard disk drivers do and
especially the limitations and advantages of
TOS versions and other alternate O/S's. From
the looks of this newsgroup, most English users
have problems understanding problems even using
English software:)
With about six months experience with SCSI Tool
and CD Tool, I can recomend SCSI Tool over any
other package availabe, and CD Tool is at least
as good of a performer as Extendos. The toss-up
between the latter seems to be between using
metados and compatibility with alternate O/S's
over TOS. Extendos (when looked at in memory)
seems to have some roots of a Mac driver code,
although I can't confirm this). That said I have
had absolutly no problems with Extendos on my
systems, some having "unusual" hardware
configurations.

Generally, post of items for sale that do not list a price makes me
think the
seller is trying to auction the items(s) without really saying so. Hey,
if it
says make an offer, I do, usually low, just like you say above and await
a
response. So I have made it policy here for myself to resist replying to
any
forsale post that do not include a price/best offer condition. I hate
auctions, especially when I have to read about the update three times a
week.

4092. Logic Audio Falcon File Format?

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <586cta$lg4@news.Hawaii.Edu>
Source record: 132584

Greetings,

Does anyone out there have any information about the audio file
format that Logic Audio Falcon uses? The manual says "raw data" but I
can't seem to load these files into anything correctly, including programs
that can load and convert raw data.

Signed/Unsigned? Motorola/Intel? Header & Header size? Any info?

Also, had anyone had any success converting these audio files to
other formats - if so, what software was used to accomplish this?

Finally, I know that there or some people out there that have
successfully created CDs from Logic Audio Falcon - how did you do it?

Aloha,

John Perez

Source record: 132586
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

I just purchased HD Driver 6 and am not at all cleat as to whether it can really read and write DOD compatible partitions, except perhaps this 32 meg or less (Hello?) Anyone accomplished this?

I have a Panasonic Powerdrive External SCSI Magneto-Optical which works on both My Atari Falcon and IBM Aptiva - now I would like to be able to share data between the two systems, and I was hoping to use a PD cartridge for this purpose.

The only mention of DOS hard disks in the manual is in the section about partitioning where it says you have to know the number of Tracks and Heads for the Dos partition/Dos Adapter. Is this even relevant to SCSI?

Finally, does anyone have any info about Bus arbitration which seems to provided the ability to access a single SCSI hard disk from more than one computer, providing they are not writing to the same partition. Does this mean that both computers can read anywhere they like, just as long as the writing is done with greater care? Does anyone have more info on this.

Any help contacting System Solutions or the Author of HD Driver (Uwe Seimet) would also be greatly appreciated. I do have access to German language assistance.

Aloha,

John Perez

M> I don't have any problems.

It may be that Oasis is not to blame.

When I changed to a 28k8 modem I sometimes found this problem with other diallers. It has something to do with the modem taking some time to work out the DTE speed and settle.

I included some delay in the init string and it then all seems to work fine.

Try ATZ~~| (in whatever format Oasis wants).

Not wishing to confuse the issue (who me!), If you already own MagiC
on your ATARI then you can use that in conjunction with the gemulator
demo, instead of magic pc, this has an advantage as it will presumably
be in English (this is if you want English), the last time i tried
magicpc it was still in german?,

>Teradesk Desktop Replacement from -

Again if you have the above magiC then you can use magic desktop,
home from home hey :)

I tried other desktops but recieved curious memory error messages
when opening a window?, Terradesk seems to work the best, thats what i
use :)

Your way will of course work perfectly, I just wanted to add my bit
for existing magiC owners, I hope you dont mind :))

I do not think that the response you quote is at all acceptable and it is certainly _not_ the norm in this newsgroup where I have always found people to be polite and helpful. I have both bought and sold ST stuff via this group without problems. Your offer sounds reasonable so I really don't see what the problem was. The only explanation I can think of is that Ted (being an ex Atari employee - most recent role chief game tester for Jaguar games IIRC) is very bitter when it comes to things Atari.

Of course, they have the right to choose who they do or do not make their software accessable to. And, of course, there must be a large number of German developers who are unable to translate their software into other languages just as I couldn't begin to translate mine into German. However, I feel that if an English version is not done for purely commercial reasons, then this is based on a false premise.

I have noticed from this thread and others that the general German perception of users in the English speaking world is a few years out of date. OK, the Germans were the first to see the potential of the ST as a serious machine whilst the rest of us kept our 520 STs and played games. But the world has moved on since then. Games software has all but dried up and die-hard games players will have had to move onto another platform in order to feed their habit. Those that are left are the hardcore of users who, for the most part, do use our machines for serious pursuits, have reasonably powerful set-ups and would welcome English versions of all that great German software that gets little exposure here. You only have to look at the success of MagiC, NVDI, HD-Driver etc. to see that this is true.

So yes, of course they have the right to choose, but in denying us English versions of their software, they are also denying themselves a fairly large slice of a fairly small market - can anyone afford to do that? Here in the UK, I don't know a single Atari user with less than 2Mb of memory and most have hard-drives too (honest Tony :-)). I guess it must be much the same elsewhere.

There is one "defragger" that works great. It's the RESET button.

The problem with paging is that EVERY memory access has to go through a table look-up process to locate the page in physical RAM (or generate an interrupt if the page is not in RAM). Needless to say, there is a certain price to pay in terms of speed. The larger the pages, the smaller the table.

A compromise solution would be to create a virtual RAM space with addresses above _ramtop. It could even be flexible about how much TT-RAM it used (minimum of 1 page). The rest of RAM would be "Transparent" (a fast access mode available with the 68030 PMMU). Of course, you don't want the loader to use it, so you'd have to intercept Malloc() calls instead of adding the virtual RAM using Maddalt().

This won't stop fragging, but it would guarentee you would never run out of (virtual) RAM.

m > RSC-Files and - in most cases - other files like
m > "alert-definitions" or something like that.

One can put form_alerts into the RSC file as free strings. It is
easier to do this AFTER you have the program up and running than
having to keep going back and forth between the code editor and the
RSC editor.

m > To create ONCE a english RSC-File it is easy. But when you
m > change something in your RSC-File (new object, new dialogues,
m > more menuentries, more alerts, and so on) you have to do the
m > same changes in the "other RSC-File"...

I'm working on a program to maintain several language versions of an
RSC file simultaneously. Okay, all I've done so far is the
drop-down menu and one dialog, but I plan to get back on it RSN.

r > I've been offered an Atari ST 520 for sale. It has a hi res
r > 12 inch monitor, 3 1/2 inch floppy drive, mouse and cables,
r > power supply. It, however, has NO software.

520ST's have only a half a meg of memory. That was a lot back in '86, but today many applications need more than that. The floppy disk may be single sided (360k) or double sided (720k). If you format the disks on your IBM (in the proper density) the Atari can read the files just fine. You will be much better off if the disk drive is 720K, double sided. :) There is a lot of pd/shareware floating around for the ST. You will have to watch that it runs in a half meg, and on a monochrome monitor. Many games require color, and some applications require 1-2 megs of memory.

r > What about a hard drive? (Not SCSI, I'd guess?)

Actually, SCSI is by far the easiest to hook up. There are several companies that made interface boards to hook SCSI up to the Atari port. Currently the Link from ICD is available for about $90 new, and you can find several other brands used for much less.

r > They paid $40 for it and I am prepard to offer that much for
r > it too. What do ya think?

I saw the same go for $22 a month ago, but I've also seen just the mono monitor go for $60, so that sounds about right.

Mine's still working.

> And on that subject, does the Module folder do anything any longer?
> I had to take CAB.OVL out of there in order for CAB to see STiK.

I don't use it.

> Lastly, what is the best (only?) way to return to URLs while offline,
> avoiding the Network is Down message and the emptying of the Cache
> information for that URL.

What is this 'Network is Down' message? I've never had it but it seems
others get this too.

I also get CAB freezing on 'Resolving Host' when used offline. Only way
out is the disable the ovl file or don't had STiK loaded.

Destruction Immenent is indeed a DOOM clone for the STFM and I
believe enhanced on the STe, I have seen a demo of it, it is actualy a
commercial game, around 9.99 ukp from Goodmans Int, Public Domain
Library, you will have to look up the contact details,
IMO this is a far better doom clone than subsation,
So its commercial, but there will be a demo, I know because it was
running at the Goodmans stand at the recent ATARI shows :)

BTW Ican see two replies to this message, but definatly I have not
had the original question, suppose that will arrive in c.s.a.st in a
day or so ? :)

Why not let the user choose which programs can have their RAM swapped out
and which can't?

This way, software which does work with the VM can use it, and softare
which is problematic can be set so that its RAM is never swapped.

Is this possible/does it make sense?

With Outside and FreeMiNT 1.14, this can be done by setting the programs in
question to use ST RAM (AIUI), but then all the ST RAM gets used up quickly
by such software. And I have found that even if I set just about everything
to use only ST RAM (and load to ST RAM), problem still occur. Outside is
the worst for me, but I have problems with FreeMiNT 1.14 as well.

Is there a way around this? I am finding that for what I am doing, 8MB RAM
is only just enough, and I wish there was reliable virtual RAM software. I
use MiNT, MiNTNet and MiNTOS, and currently Geneva rel. 5.

Where does irc.ais.net come from? It definitely isn't running on any servers
that are anything to do with them, I can say that with confidence.

How can irc own anything? I'm not sure what point you don't seem to be making
because you have yet to state it clearly.

>If the IRC server's admins have OKed the bot, then you probably are not in
>danger of getting a domain banned.

That's what I said, and what James underlined for you? Are you blind or just
stupid?

>OTOH, if the bot is running on a server owned by Cambridge, and the admins

It is executing on a computer at Cambridge (but owned by me), and the irc
server it uses is irc.warwick.ac.uk where we have permission for it to be.

I thought we both made that quite clear but obviously you had difficulty
understanding it.

>explicit permission to run that bot, that's another story. And every time I
>logon to an IRC server, I see the phrase "no bots" so I tend to wonder /who/
>has given permission to run the bot.

Well most servers say something like "no bots without permission". We have
permission, as we have both said many times.

Yes, that is true; but #atari is very rarely occupied only by a bot. What
the presence of the bots does ensure is that there is that the channel is
never without ops, as most of the regulars can get ops off at least one of
the bots.

They also provide useful services, in particular the memo facility is very
useful.

What is the fundamental difference between a human operator banning someone,
and a human operator sending a message to the bot which then bans them?

s0meone will _never_ ban anyone except in response to a command from a human
operator.

4122. FS/T: Atari ST games [12/05/96] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <587ioc$cg2@dfw-ixnews8.ix.netcom.com>
Source record: 132614

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 12/05/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

Christmas season special

From 11/27/96 until 12/21/96, all Computer item orders over $50 will receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST, Apple][, C64/C128/Vic-20, IBM, Tandy and TI. All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer systems. You can find those FS/T lists on my web site.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very

rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

> occupied solely by a bot is, IMHO, worthless.

my argument is that bots ensure a channel's existence, that was in response
to your statement "Bots do NOT ensure that #atari exists". `indisputable'
was maybe too strong, but I do believe it to be fairly self-evident; bots
stay in the channel 24/7, ergo the channel will exist 24/7. Whether a
#atari occupied solely by bots is worthless or not is not what I was talking
about, I was disputing your claim that bots do no ensure a #atari exists.

"Bots do NOT ensure that #atari exists" and then in your next mail "[a bot]
will maintain the channel's existence, certainly". maybe we are speaking
different languages.

well I stated a fact, I don't see how you consider that a different
language. s0meone will not ban anyone unless a human tells it to.

PS (funny place for a PS I know): Although mine was the first posting
in this thread, please will you all not presume that i am on some sort
of crusade to rid irc of bots, I had a valid complaint, I complained
in an ATARI forum where ATARIans would be and unsure all had access
to, I got a bit of it slightly wrong and put my hand up to that, thats
as far as I am involved, if people want to argue the validity of bots,
then let them, I had a beef, and it was sorted, or so i thought)

>yes, and at least two people have told me that they gave you the correct
>answer.

and I already explained that there was a breakdown in communications,
2 people told me the correct name, how many told me the incorrect
name?, there was a breakdown in communications, what bit dont you
understand?

>it would appear so; though it would seem prudent, in my opinion, before
>embarking on the level of flaming you did, to ensure you're attacking the
>right person.

Although IMO your bot is still partly to blame for repeatedly kicking
me, I did send you a private email apologising, and made it very clear
in here I was apologising for pointing most of my venom at you, when
only part IMHO should have gone to you, what bit of that dont you
understand ?

>> funny and I do not see how ANYONE has the right to kick me off a public
>> channel?, especially when I did not deserve it!
>
>a bot is precisely that, a bot; it can not tell whether you deserved to be
>banned or not. all s0meone did was kick a person who has been banned from
>the channel by one of the other ops. it was not the bot which banned you

all, ALL what do you mean all?, I have a right to be on that channel,
had a HUMAN been the ops, then he/she would have let me back on, what
bit of that dont you understand?

>> its difficult amiss chaos when you are trying to get on the channel and
>> trying to get rid of dopey bots, I would not know how to find out?
>
>well evidently you did need to find out, since you asked (as you yourself

YES I DID NEED TO FIND OUT?, read the original quote, I said I would
not KNOW HOW to find out, not I did not need to find out, I think we
can see which part of that you dont understand ?

>have admitted), either someone gave you the wrong information or you misread
>it.

This seems to be an important point with you?, alright you have been
told by 2 people that they told me the correct names, but put them
amist the people who told me incorrect or unknown or umm arrs, and add
to that being constantly kicked while asking by your bot, and the fact
that i had just been banned and therefore was slightly annoyed to say
the least, then thats where the confusion lies, I already apologised
both privatly and publicly for putting too much flame your way when
you only IMHO deserved part of it, NOW WHAT BIT OF THAT DONT YOU
UNDERSTAND?

Cheers.............!ynoT

What I did was to run it from my disk drive with a copy of my
hddriver file and auto C then after the tos image loads it just goes
and loads both my IDE drive and my SSCI . This seems to be the perfect
solution for TOS 4.92 !

Only a small point, but perhaps relevant:

I was able to get excellent web access with my TT using StiK and CAB at 14k4. I looked at MintNet and ran away. My anorak's not well worn enough (yet) to try and install linux.

But I don't know if StiK can be configured to work with Compuserve... Flinny...?

Best wishes

Message-ID: <19961205033500.WAA17862@ladder01.news.aol.com>
Source record: 132660

I got the following message from Ted Tahquechi, author of the post entitled "Atari ST stuff for sale!!!":

Fuck you. I would not sell you the dog shit from my back yard you pretentious asshole.

This was in response to our negotiations. Apparrantly he did not feel my offer of a canon 486/66 color laptop in exchange for his Mega STE system+$150 cash differential was a fair one. In addition, I believe he used the word 'pretentious' because of the overly polite language I was using during negotiations. It is true I was being overly polite, I admit, but I was simply trying to avoid offense. With some people this cannot be accomplished.

I have our complete correspondence and will E-mail it to anyone who would like it. My question for the group is this: is this sort of behaviour, just par for the game, or is there something this AOL user has yet to learn about internet ettiquette?

its traditional in some circles to begin negotiations with a low figure (or high figure depending upon the party) and then work towards a mutual acceptable figure. In addition, it is understood that a mutual acceptable agreement may not always be reached. Am I insane, or is this how things are done? I ask this question honestly.

mn> No, I have never seen any estimates. I am wondering how many users
mn> there have been...

The last time I saw any figures for new machines sold (from the very
beginning) it was in excess of 900,000. Whether this ever hit the million
mark is debatable - I suspect not.

If the number of people who bought second-hand machines were added I expect
it's a much greater number.

mn> and even more interesting: what is the current user base?

I couldn't possibly estimate it...

Maybe, we'll know more about it at ATARI Show in Paris (7&8 Dec)
I'll tell you then, ok?

You can download the demo version at ftp.cnam.fr/pub/Atari/Internet
(or at mirror site ftp.gui.uva.es/pub/Atari/Internet)
But it is not very great. You cannot be connected.
It will work with STik, or PPP link...

4136. CAB not connecting?

Newsgroup: comp.sys.atari.st
Date: 1996-12-05 00:00:00 UTC
From: dogmeat@netcom.com
Message-ID: <dogmeatE1xBGt.BE0@netcom.com>
Source record: 132664

All:

Please help with the following CAB/STik problem:

I am unable to get CAB to retrieve URL's when I try to look at a page on the net. This is the message it gives me...

"Read error in file ['\(selected URL)']"

JFurthermore, programs such IRC are now reporting '68000 exception' errors and other programs such as AntMail are reporting 'transport layer not loaded' which I assume refers to STik

I am assuming that this is related to a problem with STik. I am not sure that the TCP/IP connection is valid. I did sign up with a SLIP internet provider, and STik does report that I am connected. However, I am unsure...

Here is what happens when I dial up, using Connect 2.46

```
CONNECT 14400/ARQ/V32/LAPM/V42BIS
login
Password:
SL/IP session from (206.155.44.1) to 206.155.44.41 beginning....
```

Here's the STik routine...(dial.scr)

```
FIND = login:
RESP = ********
WAIT = 0
FIND = assword:
RESP = *******
WAIT = 0
FIND = (
RESP = $GET_IP
WAIT = 0
```

And here is my default.cfg:

```
SERIALPORT = Modem 2
CDVALID = TRUE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 1500
DFB_SIZE = 580
PROTOCOL = 0
```

```
RCV_WND = 5360
UP_RESPONSE = 2
USERNAME = *******
HOSTNAME = fog.net
FULLNAME = Brett Nair
NAMESERVER = 206.155.44.10
NAMESERVER0 = 206.155.44.3
IRCNICK = {nonick}
IRCSERVER = {noserver}
IRCPORT = 6667
IRCPONGMSG = Slow isn't it?

Can Anybody out there help?

THANX!

>software for a difital camera?

There are multiple digital cameras available, so it would depend on which one you had in mind I guess. I recall seeing a while ago a thread on connecting the Connectix Quickcam to the Atari through the serial port. I would have expected it to be fairly easy to write a driver for the camera on the serial port, but someone said that it used some network protocol which would make things much more complicated. I find it hard to imagine that this would be true, though.

So I am guessing that it would not be a greatly complicated task. I imagine that, in general, it would be a matter of sending some kind of "grab picture" command and then simply reading the image data. If I had a digital camera, I would be writing the necessary software now. Surely some programmer has access to a digital camera and could write the software?

If, OTOH, anyone has done this already I would be very interested also. I have a TT030 and Falcon030 which I would like to be able to connect a digital camera to.

Sorry to restart an old thread, but where is the new Atari Computing Magazine???

I know that the first issue was on show at the Atari shows in London, in late September and I know that it sold out and had to be reprinted. I thought it was so good that I took out a subscription myself immediately, starting at number 2. The cheque has been cashed.

As I understood it, issue 2 was to have been in early December, and issue 3 in late January.

So, were is issue 2? We are well in to December now. Has any body else got their issue 2s yet?

Oliver

There are no "animation JPEGs" on the Web. And every JPEG is compressed.
If you want people to know what you're talking about, you'll need to
use the correct terminology; this ain't it. I'm guessing that what you
really mean is progressive JPEGs.

> You might try http://www.word.com/gigo/ and click on "Kittens". You'll see

Those look like perfectly OK progressive JPEGs to me. A little bit
avant-garde, but most mainstream browsers have been able to read them
for a year or more. Time for CAB to get on the stick, no?

For more info see the JPEG FAQ at
http://www.cis.ohio-state.edu/hypertext/faq/usenet/jpeg-faq/top.html

>
>I haven't tried this out yet, but does the complied STOS program assume
>you are running it from the root of A: or from whatever folder and drive
>you run it like STOS basic programs?

I'm not sure what you mean...

STOS programs make no assumptions about where the program is run from *unless*
the programmer has decided to load extra files (as Tony frequently does).
If this is done, the STOS program gets the files from the place that the
programmer has specified. If they used an apsolute path (eg. a:\bobs\sprite.mbk)
it will look at that path.

If given a relative path (eg. bobs\sprite.mbk) then it will work fine wherever
the program is put.

Tony was using paths such as \bobs\sprite.mbk which is relative to the drive -
ie. should work whichever drive it is on, but apsolute within that drive (ie.
requires that there is a directory bobs in the root directory with sprite.mbk
within it) This is why it wouldn't work if you put it in e:\games\hero\
as it would be looking for e:\bobs\sprite.mbk

> I'm not even sure how to run Hero
>any other way other than on a floppy without the hard drive on.

Well, put the folders (misc, gfx etc.) in the root directory of your hard drive,
and put hero.prg in the root directory. Double click on hero.prg and it should
work.

BTW. my Falcon fixed version of Hero has this bug removed. :)

Hmm... in the 'fake' VMem that we had to implement for a lab exercise we had to build a form of cache (Translation Lookahead Buffers) to prevent the need for this large table. On my simulations (based on trace files from GCC compiling something big) these make a significant difference to the time taken...

From the description given above, it doesn't appear as if anything like this is implemented, so perhaps it is worthwhile investigating this?

Hear yea Hear yea, following Atari goods for sale....

SC1224's - 'refurbished' w/ original box & doc's...$65
- 'used' tested, good working order, good brightness,
color
& contrast...$50.

PCM124 - 12" 9-pin Atari PC Monitor-'refurbished' w/original
box,doc's...$65.

Calamus SL with extra plug-ins, original software & manuals, ask for
details...$200.

Aerochopper R/C Flight Simulator w/ Futaba R/C Transmitter contoller,
software in original box with owners manual...simulates flying r/c planes
and helicopters..$125.

Jaguar with CD Player includes all 'pack-in' software as sold by Atari.
Original box and doc's PLUS extra controller, Raiden Cartridge, BrainDead
13 CD, Highlander CD
All for $200.

Golden Image Cordless Trackball- new- $15

AlberTT v1.2 Video Card for MEGA STE or TT. Dover Research Corp 1991
w/9pin
to 15 pin cable + plus software...$125.
Heres more info on the AlberTT- 1024x768, 16 colors from palette of
4096.
Makes hi-res look like ST low res, just with a huge window.

Buyer pays shipping. Payment made by check/money order or COD.
Ship from New York, USA. /Danny/

ps-have 10 720K floppy drives pulled out of 1040STF's that are in need of
some
type of repair. If anyone is interested in fixing these up let me know,
can let you have them 'cheap'. Can't fix myself and would hate to throw in
trash.
Also have 1040STF's without the power supplies and floppy drives, i.e.,
mother board w/case. If anyone is interested in these too just give a
yell. Thanks. -DF

>the channel by that act if it is somehow removed). And a channel that is
>occupied solely by a bot is, IMHO, worthless.

What you dont seem to understand is that the bots were put there for a
reason.. eg to KEEP the channel efnet being like it is there are lots
of people who make fun of atari computers in general and try to
takeover the channel with netsplits etc the bots keep these under
control. Most of the time there are people in #atari somethimes though
that isn't the case.. past experience dictates that if there aint any
bots in #atari and everyone leaves (quite common when the Europeans go
to bed) only the bots remain. When we for some reason dont have any
bots most likely when we get up in the morning somebody has taken over
the channel and but his own bot there. Some of them just sit there
with ops and dont let anybody do anything some just ban everyone who
enters the channel.

>At this point, I consider the entire discussion bootless - I won't be
>joining efnet as long as bots are banning people, and I see no flexibility
>in the bot's owners' position. Certainly you've gotten along without me in
>the past, and will do so in future.

Bots keep a banlist most efnet servers can only handle 20 bans at once
and thus any more have to be kept on a bot to be banned when they
enter.. for gods sake we have more than 20 people who constantly try
to make trouble on #atari (usually dedicated pc and amiga owners who
think its gonna be fun)

>Anyone who is interested in a bot-less #atari channel can try
>irc.warnerbros.com - it's underpopulated anyhow.

Unpopulated.. boring.. #atari on efnet usually has 20-30 people on at
night time which leads to some good discussions if people start
splitting up onto other channels and other networks then there will be
lots of 2 people discussions and irc will become useless..

I still go by that this discussion should be held on irc.. News is not
a good place for arguments too damn slow with irc its instant (nearly)

Nick.

this..
Bloody hell,
Ok both tb and s0meone are afaik only run on machines and servers they
have express permission to use.... the end they are legal!

>I see the phrase "no bots" so I tend to wonder /who/
>has given permission to run the bot.

Lots say no bots without permission /admin on a server tells you who
runs it.. email them and ask.

Nick.

I don't know where you get that info, Uwe, but it certainly isn't relevant to any of the SCSI drives used in the lab here, with Adaptec host adapters, and running MS-DOS, Win95, WinNT, or Novell Netware. I haven't used OS/2 on 'em yet, but I don't see why that would be any different.

Using the HDdriver demo version (which only permits access to the C:
partition, IIRC). I ran RATEHD under AHDI, under ICD, and under HDdriver,
and got the best performance with HDdriver (the difference isn't huge, but
every performance tweak counts). More importantly, using ICD or HDdriver,
you no longer need FOLDERxxx - which is only a kludge, really, I still run
out of folder RAM about 3 times a week.

4157. STIK questions

Newsgroup: comp.sys.atari.st
Date: 1996-12-06 00:00:00 UTC
From: glennm@mail1.sas.upenn.edu
Message-ID: <589fef$t48@netnews.upenn.edu>
Source record: 132484

I have some general questions about using STIK, that I hope
someone here can help me with. Using NEWSIE I am getting the message
"Dropped Packet bad IP version".

1. My provider lists a primary and secondary DNS hostname, but as I
understand it,STIK only uses one. If I get into the secondary while I'm
set to the primary, will anything happen at all? I mean, could it
connect, but give me this message?

2. Assuming the DNS hostname is not a problem, I would quess it's the IP
settings. They are as follows:
ttl=64
ping ttl=255
mtu=252
rcvwnd=2000

I would like to know what the heck these are so I could adjust them.
Could someone point me in the right direction?

Thanks in advance,
Richard

I have never had to deal with these settings when using SCSI devices on
the PC, but I assume they are just buried deep enough that users don't see
them. A bit of digging through some Adaptec SCSI host adapter software
manuals (EZ-SCSI 4.0L) described the translation schemes used by Adaptec
SCSI host adapters. This information is foolishly left out of the
hardware manual, which was why I assumed that it wasn't relevant.

The manual for my product (EZ-SCSI 4.0L) says:
---
Adaptec Host Adapters use the following translation schemes:

Drive Capacity Translation Scheme Number of Cylinders
-------------------------------------------------------------------------
Less than 1GB 64heads, 32sectors per track Equals # Mbytes Capacity
Greater than 1GB 255heads, 63 sectors per track One cyl. per 8Mb Capacity
-------------------------------------------------------------------------

I pray that is the relevant info :)

> 160 3f7ff0 KROM 8000 305c boot 33b1fc
>=====

There is a fair bit more fragmentation than I have after booting but it can be ignored because it's fairly well packed together. The one for concern here is the "158" one. The actual size of it is irrelevent but all the same - $21220 bytes? What on earth does it want 135,712 bytes for? The other question is why this block gets allocated ($bcde4 or $d4718) bytes into the free ram? Can you match either of those sizes to a program which has run prior to you running memexamn (runtime size from the program manager not filesize)?

Something like this will have happened: blocks 157,158,159 will have been a single block of size $d4718+$21220+$bcde4+32 then something got loaded into it leaving $21220+$bcde4+16 free. Whilst this "something" was there magxdesk.app allocates $21220 bytes. The "something" releases the memory resulting in the fragmentation above.

Find the "something" and you have your man!

>Looks like it is, but I'd like to know what 'boot' refers to...

Er, I dunno - something internal but it's tucked away right at the top of ram so shouldn't be any trouble here.

[snip]

If you can't find the "something" I have one final idea. It aint brilliant but it could be made to work ...

I have a Gem programming tool that runs only under MagiC and must multitask. It's actual purpose is to gobble up the memory leaving only a user specified amount free. If you were to run this very early before the above fragmentation occurs then the memory it gobbled would be a single large block - ie you only leave enough memory free for the system to get booted (trial and error) so ideally it would need to be the first (the only program there really) program to run from MagiC's

auto\app folder. Having discovered this value, just before you run Papyrus you would quit this tool, whereupon it would release the gobbled memory. magxdesk will hopefully have performed its $21220 allocation by then (or be forced to do it by running some other program then quitting it) and Papyrus should now see a single large block.

Messy but feasible. :-|

>But... this whole thread could be resolved if someone wrote a "memory
>defragger":

Not possible I'm afraid. Although the operating system can relocate
the program on startup there is no way to do it once a program has
started running without co-operation from the program itself. The
program would need to update pointers etc.

>The same idea as a disk defragger but for memory - when the largest
>free block of memory becomes too small to do anything useful with,
>this utility could be run (in single-tasking mode?) to move all
>running programs into contiguous blocks of memory, thus creating one

>there is not enough room to load the memory defragger the machine will
>have to be restarted or another program terminated - a way round this
>would be to have the memory defragger loaded all the time either as an
>accessory or as an integral partof the system.

At the end of the day it really rests on the shoulders of the
programmer. Memory fragmentation should not be a problem in most
programming situations. Suffice it to say, it's easier to just declare
an array of "something" rather than create a linked list or an array
of pointers to "something" if "something" is quite big. ;-)

>A memory test program I have claims to be able to move itself about in
>memory to test the area it was loaded into, so maybe it is possible to
>move other programs?

Possible but not practical I'm afraid. The operating system maintains
a "basepage" for each process. If a program moved itself then it would
need co-operation from the operating system in order to move the
basepage as well. The program you mention probably achieves this by
means of undocumented features.

>Another next best alternative would be a utility that showed the order
>that programs were loaded into memory (rather like the No Sort View
>option in some desktops). This would allow you to unload programs in
>reverse order, thus freeing up Ram as efficiently as possible.

>
>I suspect there is a multitude of technical reasons why these things are
>not possible, but if not will we see it in Geneva release 006 ;-) ?

Yep! :-)

Hardware is the usual solution to this problem because it can be done
without the program knowing a thing about it.

4168. FS/T: 4 gig SCSI drive

Newsgroup: comp.sys.atari.st
Date: 1996-12-06 00:00:00 UTC
From: atari@teleport.com.REMOVE.THIS.TO.REPLY
Message-ID: <589r6s$ak8@ornews.intel.com>
Source record: 132495

I have a spare 4 gig Seagate SCSI drive (it's fast wide SCSI-II using the SCA connector, AAMOF; you can get an adapter to use it with "narrow" SCSI, as used on all Atari host adapters, for about $60). This drive sold new for around $1500; I will warrant it for 90 days, but as it's a Seagate, it will probably live longer than I will. <G>

I need enough cash to get the following (estimated about $600), or will trade if you somehow happen to have what I need:

- a decent VGA or SVGA monitor
- TT FastRAM card w/o RAM (I have more SIMMs than Clinton has skeletons in the closet)
- a pair of Norbert's DMA/SCSI Ethernet cards with MIDIcom/NetBEUI drivers
- Link96 for the Mega STe

Other things I could use:

- TT030 motherboard (I don't need the case, PSU, or keyboard) w/ 4+ megs ST RAM
- 28.8k or faster external modem

Could also use a little common sense, if anyone has some to spare...

I'll entertain offers of cash, cash plus goods, or just about anything that can be turned into liquid assets quickly.

> requires that there is a directory bobs in the root directory with sprite.mbk
> within it) This is why it wouldn't work if you put it in e:\games\hero\
> as it would be looking for e:\bobs\sprite.mbk

Let's see if I'm getting this straight...in the code you have load
"\bobs\sprite.mbk" and you're running it from "e:\the_game".

It wouldn't matter what drive you run from such as A: or D:, but the
program expects it to be in "e:\bobs\sprite.mbk" and not automatically in
"e:\the_game\bobs\sprite.mbk", is rthis correct?

My guess is then to try to find the pathway that GEMDOS used in running
the game from the desktop. Using a asm routine, I can get the path string
from a trap call and pass it to STOS. The path is "\the_game" and I can
tack it before whatever filename STOS has to load in. I.e. load
PATH$+"\bobs\sprite.mbk\" so it reads "\the_game\bobs\sprite.mbk\"

Then this way, you can put the game and data folders in any folder
anywhere. If I have something missing here then please tell me, cause I'm
still figuring STOS out :)

> > I'm not even sure how to run Hero

> work.

Think I'll try that. Of course, Hero and such games will need the hard
drive off with only 1 meg and I may have to use Divert for some games that
"must" be on A:. Could work :)

> BTW. my Falcon fixed version of Hero has this bug removed. :)

Meaning, any fixed STOS games don't have this problem? :)

Just for the sheer, unadulterated fun of it, I took the RSC file from v2.46
and plopped it into the CoNnect '95 (dang me if it don't almost seem like
a travesty to type anything with '95 in it!) <grin> folder and got instant
English dialogs--I just don't know if it left anything out when I did that
though...It did show CoNect 2 instead of CoNnect '95 (sigh) in the first
window though...

Once when I was installing TOS v2.06 in my STe, the Codeheads (remember
them?) told me not to worry about if I put them in wrong that it would
-not- hurt anything, only give you a blank screen on bootup if they
were not in correctly...Seemed to be correct, 'cause I got them in
wrong the first time... :)

>I pray that is the relevant info :)

Ah, now that makes a little more sense. MS-DOS access drives somewhat like
the old Atari 8-bit DOS did - byt sector/track addressing (although not as
close to the hardware level). The host adapter in a DOSbox has to translate
the requests into something that makes sense to a SCSI drive. What they're
telling you for the EZ-SCSI is that small SCSI drives are treated as 1 meg
per cylinder, and larger drives are treated as 8 megs per cylinder. That
doesn't really have anything to do with the way the host adapter talks to
the drive, though, it's a MicroSlop thing.

Steve,

I fully agree with you. It must not happen that the ST becomes a German-only computer. Being German, I still think that no computer can survive if it doesn't have English software, because that and only that can be used by virtually everyone, in every country. It's also a good basis to make translations to other languages of, because e.g. in Norway you'd expect to find some English speaker to translate stuff, but a German speaker might prove harder to find.

So, if God only helps those who help themselves, we ought to sit together and establish a ways of getting things translated. I would gladly participate, but only if the authors of the software agree. I wouldn't want something like that Thing drama a few months ago.

Let's collect the programs you need, and ask their authors, and then distribute the tasks of translating and proofreading. I'd be glad to help in such a project, but I don't think I have time enough to do it alone. As you might have guessed.

Yours,
Erik.

4181. PageStream on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-12-06 00:00:00 UTC
From: phantomm@harold.eastky.com
Message-ID: <589j2i$vu1@netnews.mis.net>
Source record: 132508

I haven't done a lot of Pagestream stuff using the Falcon until the other night. When I wanted to print out 2 of the same .GIF pictures on a 8.5 x 11 page. The Gif was a little over 50,000 bytes in size. I had each one scaled down to fit a little under a quarter of a page. I had a few words over and under each GIF with a Font size of around 30.
(The page layout is for getting 2 fold over invitations out of 1 page)
Half the page is blank, the other half has the graphics.
The total PageStream Doc. is about 140,000 bytes in size.
I am using a 14meg Falcon with OutBurst v 3.1 on a HP DeskJet 540 with the Pagestream Outburst HP DeskJet Driver. PageStream v.2.2 and black ink cart.
Now the problem....
I wanted to print at least 25 pages. Actual printing time for each page was about 30 seconds. (Not too bad) Actual page creation time was at least 4 minutes. (For Each Page!) After 1 page was printed, PageStream would recreate the page before printing again! So to print out 25 pages it would take at least 1 hour and 40 minutes not counting the actual printing time!
Now I had over 12 megs of memory before running PageStream. PS took all except for about 75,000 bytes of system memory.
Is it normal for PageStream to recreate a page of this type and size in memory before each printing???

BTW, I did print out a similar page format using a small .img for the graphic and PS only created the page once.
Any Help with this would be appreciated.

phantomm@harold.eastky.com

what poxxy net is that Steve old chap :-)

Well I only released Diamond-Ice on Monday (feedback is lacking
everyone!) and Keefy should upload it to ALL AT SEA BBS, no
preference, its just his local :), then from there it gets...errm
whats the term, Fanned? or something, never did figure that part of
the excellent pastime of BBSing out:)

So it should arrive eventualy, all other titles, or at least the ones
released in the last few years should also be on BBSs, definatly
Ad-Lib, but you can't file request from there can you?

MultiPakman, H.E.R.O. SPOT IT, VidIgrid 1 and 2 (2 reccomended),
Heartland, and a few others should all be on most BBS systems,

I will ask Keefy when he is uploading Diamond-Ice if he hasn't
already,

Fanx for the interest, I hope its worth your time :)))))

>Well I find it very normal that bots ban ppl. Flooders, hackers, ppl
>known to be annoying aswell. You want to stop bots from banning by

Well I certainly did NOT find it normal to be banned, or repeatedly
kicked, after being banned, not only did I do none of the things you
mention, I actualy did nothing wrong, but got banned by TB bot, then
repeatedly kicked by s0meone bot,
No matter how everyone dress's this up,no matter how many arguments,
it was/is wrong to be banned or kicked no matter what reasons people
bring forward,

1)Everyone would agree I did nothing wrong
2)Everyone would agree that no Human would have banned or kicked me,

>I don't see how a proper bot can be annoying to your so called real users.

Would you dispute that I am a real user?, I think it is well
documented that I was "annoyed" :)

>In fact the real users probably like good bots to help around. One of the
>main reasons ppl put so much work into them I guess.

I think the operative word here may be "good", I have never suggested
getting rid of all bots, just the ones that are harmfull, how many
people have been banned or kicked in the last couple of months, for no
good reason, I am not the only one to get banned for doing nothing
wrong, I just brought the problem out into the open, it seems better
than everyone bickering and making new ATARI channels and splitting
the irc community,
"Freedome of speech"?, TB bans people for saying things it doesnt
like, s0meone bot than backs up this stupid behaviour by then kicking
whoever TB wrongly bans,
I like GOOD bots, and I know that most people advocating a free bot
channel where quite happy a year ago with ATARIBOT, wasn't we all:),

I would rather NO bots than a bot that bans people for saying phrases
or words it does not agree with, and a "sheep bot" that then acts on
what TB bot has done?

It would seem you are going all around the houses as we say:), just
remove the first backslash and it works alright
Since finding this out (thanks Anthony) all following software should
work faultlessly from anywhere on your harddrive heartland, diamond
ice etc,
unfortunatly if you only have one meg then it wont work because it
has to run from an auto folder, yes I used that much memory, but
hopefully you can see how/why :)

>> > I'm not even sure how to run Hero
>> >any other way other than on a floppy without the hard drive on.

Unfortunatly with no hard drive and no idea and no contacts with a
hd, i simply did not know how, its that simple, now i have internet
access i am finding out all these things <SMILE>

>> BTW. my Falcon fixed version of Hero has this bug removed. :)

>Meaning, any fixed STOS games don't have this problem? :)

no, meaning when he got the source to make changes to the code to
make it work on the falcon, he also changed the commands that load
files :)))

Unless the STs are VERY old the boot disc will not be much use to you (I wonder what's on it?). Any other than the early ST have their operating system in-built on ROM so they should boot up without a floppy. The only good reason for having a floppy loaded at boot-time is to stop the m/c searching for a floppy in drives A: to P:.

If you format a floppy on a PC to 720Kb (or 360Kb if the ST floppy is single sided) it is readable by the ST, Just download on the PC and copy onto such a prepared floppy.

The CBHD kit is not JUST a HD driver. It also contains a comprehensive SCSI
interface which can be used by other applications. I think this interface
hooks into TRAP 7.

SCSIDRV is very much like CBHD in that installs the driver AND the interface.
CBHD0 just installs the interface.

4192. German-only software: why? views on this anyone?

Newsgroup: comp.sys.atari.st
Date: 1996-12-06 00:00:00 UTC
From: RCain@nest.demon.co.uk
Message-ID: <594_RCain@nest.demon.co.uk>
Source record: 132529

Hi hallvart@sn.no, on 01 Dec 96 you wrote:

h> A software-author would reach a much bigger crowd with at least
h> having their software in English (as more people understand English
h> than say German in the world).

But the German ST community is very large in itself and also contains most of the best programmers (no flames, please). The have no real NEED to expand their market. I'm sure English is just as difficult for some Germans as German is to you, Hallvart.

h> I've come across several great packages on the net (they definitely
h> looked impressive), but as the menues/docs have been in German, French
h> or whatever they've been too hard to understand, thus giving up the
h> package completely.
h> Anyway, does anyone else here have views on this subject?

Hmm ... the easiest way is for you to learn enough German/French to understand what is going on and buy a dictionary!

Otherwise we need some kind bi-lingual souls to do the translations for us (with the programmer's permission). I don't think it right that the programmer should have to do the translations - he is FAR better occupied doing what he knows best!

In the UK Joe Connor provides such a service and translates,releases and supports worthwhile shareware. Of course, there is only so much one guy can do so we can't expect him to respond rapidly to each and every non-english release.

There is also an organisation (known as ASSI, I think, and based in Sweden) which does something similar.

There are enough of us about who understand sufficient of a foreign language and sufficient about programming and software jargon to be able to do this job. The problem is co-ordinating the effort and releasing the results. I once struggled through some docs. on a TeX implementation (German, naturlich!) and managed to squeeze them onto the release floppies of a PD agency. It's not always as easy as this, though.

h> causing all this trouble once and for all. Can anyone help?

The ICDFMT program has an option which allows you to "Write Partition Info
Only". This stuff goes in physical sector 0 so it ought to allow you to
correct any bad values which may be there without zeroing the FATs of any of
the partitions.

4194. Atari Computing Subs

Newsgroup: comp.sys.atari.st
Date: 1996-12-06 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E1yv83.Ht0@cix.compulink.co.uk>
Source record: 132531

As a last word on the various ideas for receipting subscriptions:

Atari Computing will not be using any form of subscription receipt (e-mail, SAE postcard or whatever). Your cheque being cashed is your receipt.

I don't know about anyone else, but I have never had a receipt from any other magazine subscription in the past.

All the various ideas sound great in theory, but, in case anyone is not sure about the status of Atari Computing, it is an enthusiasts' magazine compiled and distributed by Atari enthusiasts which, unfortunately, does not have the resources of a 'full-time' publishing company. Therefore all our efforts must be directed to getting the magazine out every two months, rather than try to answer individual subscription queries or to run an Atari 'helpline'.

All copies of issue 2 should be posted by Friday so the perceived problem should simplay go away when you have received your copy. There's only a very small group of volunteers doing the work in their spare time, and we've been a victim of our own success!

In the unlikely event of a problem occurring after each issue has been sent out we will do our best to help, but in future A|C|G will no longer be able to answer individual speculative enquiries.

: H0 L0
: H1 L1
: H2 L2
:
: Is this the correct original order?
:
: Alyre Chiasson
: Chiassa@umoncton.ca

WHOA there! Better yank 'em out to try again... I've done similar
things, like trying to get a 2-chip set to work on my 6-chip 1040FM.

These sort of things would burn out other comps in a blink, and I know
that they're not too healthy for an Atari. But the little tank still
works.

According to the little sheet I got from Toad, the order is:

U7 L0
U6 L1
U5 L2
U4 H0
U3 H1
U2 H2

So it looks like you got the L chips backwards..

As Monty Python crew once said, "Start again!"

Had to stick my nose in, didn't I everyone? ;-)

Well I find it very normal that bots ban ppl. Flooders, hackers, ppl
known to be annoying aswell. You want to stop bots from banning by
speaking to what admins now? Er, doesn't sound very plausible.
Besides, AggroBot is not a violation of any terms, it's even running
on a machine meant for running bots like it.
Waste of bandwidth? Oh yeah, opping ppl, offering channel protection
and possibly offering files might by in some ways wasting bandwidth but
that's been done all the time by ppl IRCing/doing anything else on the net.

I don't see how a proper bot can be annoying to your so called real users.
In fact the real users probably like good bots to help around. One of the
main reasons ppl put so much work into them I guess.

> are unothorised will get you nowhere.
> Without Bots on #atari there would be no #atari FACT!

Yes I remember ages ago before the bots came that #atari was in fact
pretty dead. And even if we didn't have *bot programs certain people
would still idle on the channel and op their elitist friends or have
their own oplist so the situation wouldn't be much better. Possibly
worse.

There's no bot on DALnet #atari because on DALnet there's no need for
a bot keeping ops. A fileserver bot and fun bot could be an idea though
with maybe the possibility to op when (quite often) ChanServ bugs.

... this is not a DALnet promotion as I've lost a bit of faith in DALnet
and stuff...

Exactly what I was trying to get at when starting this thread- that there's lots of *excellent* packages out there, but due to the language problem a lot of people leave them alone and miss out on software you have a hard time even finding equivelants of on PCs, Macs or whatever!

Personally I use several German packages, but that's because I have a fairly good idea of what the program does (and it's not too risky to try out some of the features).
Regarding the harddisk driver "CBHD" I should have left it alone because I certainly didn't understand enough to use it properly, so I messed up my drive (luckily I didn't erase the data on it!).

If I was a programmer- either shareware or commercial, I would certainly like to see as many copies sold as possible for my hard work. And if that meant translating it into other languages I would definitely do it- especially if someone else offered to do the work (yes, I can understand that it'll involve a lot of extra work for the programmer, as has been pointed out in this thread).

I do know that English is a "problem" in Germany- Germans don't get that influenced by it as for example us here in Norway (and the rest of Scandinavia), and a lot of other European countries.
So I guess to justify my wish of having English translations of all software I would have to let the Germans get their translations as well.
My point is that anyone who wants/needs that particular piece of software should be able to use it regardless of language (well, within reasonable limits- I can't quite see someone translating them to Swahili.. ;-)).

Although I'm Norwegian and there are several translations of ST software into Norwegian and/or Swedish and Danish I do prefer the English versions. I'm sort of used to having English as *the* computer language, and after all it is a "world-language".
So the bottom line for my view is to translate software into the *major* languages of the world.

Several people in this group have already offered to help translate, so perhaps we can all do a little part and try to make this work somehow- at least with the most popular packages...

Concerning the latest HDDRIVER (i.e. version 6) the manual is already
translated and the driver is available as usual from System Solutions.
BTW, any version of the HDDRIVER binaries is immediatly available in
English and in German because all the programs that belong to the
HDDRIVER distribution support the German _and_ the English language.
The manual translation is done by System Solutions, the binaries (i.e.
the dialog boxes etc.) are translated by myself so that they are alwasy
up to date in German and English.
BTW, the same applies to the virtual memory manager OUTSIDE.

I suggest you evaluate it yourself using the demo version of HDDRIVER.
If you work with a SCSI drive at the ACSI bus you should turn on the
"Fast ACSI" option. Depending on the drive and the size of blocks to be
transferred this will give you a plus of speed of up to 50% compared
with AHDI.

Regardless of the hard disk driver you use you can read/write DOS
compatible partitions only if you run MagiC 5 or Big-DOS. (Big-DOS you
can find on the HDDRIVER disk in the CONTRIB folder.)

> The only mention of DOS hard disks in the manual is in the section
> about partitioning where it says you have to know the number of Tracks and

Yes, this seems to be relevant for SCSI. Not for the Atari, but for the
PC.

This is correct. Note that the computers' SCSI IDs must differ.

Thanks to all who responded.

I have now used Hallvart's www page to visit such places as .uky
and .paderbourne.de, two of the many links on his page.

And woulddinyouknow?, at .uky there was file #1765- multisync.faq! It
may also reside somewhere at .ummich, but I haven't checked yet.

As always, when one seems to hit a brick wall on one's own, the
response (which fully answered my queries in itself) and the positive
feeling gained from the support of others makes one's own efforts
more productive---I started finding all kinds of things I couldn't
find before!

Thanks for the terrific response and the support. I'll try to hang onto
my files, this time!

Bob

SED 5.6.8 has a sub menu which allows SCSI commands to be sent to the hard
drive. You could probably (if you know the command structure) make the
disk do a low level format this way. Do you have any SCSI manuals ?

I have not tried this, & be warned, the menu's are in German, but if you
are careful you might be able to fix it.

Hmmm. I've seenone (long time ago). I think it is either one of the packers
(eg Atomik, Ice), or an image file from one of the copiers. Can't remember.
Try megadepack (multiformat unpacker) on it and see how you get on...

Nope. As it worked on my Falcon I guess not. :-)

I couldn't find many differences from 2.46 except that the dailogs are
now in 3D.

I don't see why it's called '95' either as the version I have is from '96'. ;-)

GEMVIEW Releases are packed to files like gvw_v306.pax. These can be depacked by its specific installer for GEMView: gvw_ins3.lzh . Hope it's your thing.

There are a number of ST fixers in the UK - try Rossiters in the Midlands. Sorry I haven't got the full details to hand. Titan Designs should know since they have a lot of dealings with them. e-mail 100345.2350@compuserve.com.

The only printed UK magazine is Atari Computing. It is subscription only and issue 2 is due out about now. Details are available on the Atari Phile home page http://www.walusoft.co.uk/fff/home.htm. You might need to be quick on this one since they are currently showing issue 3 (with the details) but issue 4 (which might not have them) is due as I write.

Just my opinion, but on the Falcon I had nothing but
problems with V6.061. Just going to 6.06 solved a
pile of disk problems I was having. Sometime long
ago (a place not to far away:) someone had
stated that they thought 6.061 was not really released
from Atari but was a "hack". I think I read this on
Genie. Anyway, I deleted 6.061 from every nook and cranny
on my disk and use only 6.06 on my standard Falcon.
However, Alex at ATY computer recommended a version
in the 5.xx for TOS 2.XX computers. I do use 6.06
on my MST and MSTE and 1040ST without problem however.

Yes, you may be right that it was an excuse, but there is some foundation to
it.

>There is no way software can see the bus width it's running on. There are no

I have always wondered about that... but why is there a bit in memory
($ff8007 bit 0 I believe) which toggles 'STE compat bus mode'. This is one
of the things that Backwards sets...

Well I dont think that memory serves you correctly. :)

AES 4.0 is the version of the AES supplied with MultiTOS (or at least with
my copy. I heard that the AES 4.1 was actually sold in Germany, but not here)

AES 4.1 is the beta that is floating around. TOS 4.92 also returns AES 4.1,
but this is a slightly different AES version.

AES 4.1 is the one with Iconify, Toolbars etc. (hmm.. yea, thats a good point
I ought to test my toolbar code under TOS 4.92...)

: The trouble is that the cubase kit works fine on the st's (which are all
: 1Mb, so a bit tight for anything useful with cubase) but it doesn't work
: on the Falcon.

From what I remember, the older versions of Cubase won't work on the Falcon, period. No user-side hacks can do it....(although, now that I think about it, what if someone were to try Backwards or one of the STe emulators on the Falcon?)

You could write or call Steinberg UK tech support to find out the price of an upgrade to a version that would work, or a cheaper route would be to find a 4-meg ST, STe, or Mega to run it on.

Or you could run one of the other nice sequencers out there. Hopefully at least one would run on a Falcon.

For more info, you could do a DejaNews search for your topic's keywords on "alt.steinberg.cubase"

: (I know about the DSP, but all I need from the Falcon is sequencing. We
: use sgi workstations for 4-channel realtime audio processing; the Falcon
: looks a bit pale beside them).

I dunno. Never tried the sqis, but an 8-in 8-out Falcon w/Cubase audio 2.06 and an external mixer seems to hold up pretty well in the quality and flexibility departments.

How much were those sqis? yukyukyukyuk... No, really, joking aside, what's the ticket on them?

I think that is a dead horse issure. A while ago a minority (at least
2:)
said the SinPlop was indeed a necessary evil in the .advocacy group.
"Make it so" was I think the general agreement, although not many
actually
stated this. He is free to rant and rave as he wishes. My only concerns
are the amount of clones he produces.

As far as what I think this post was first intended to do, was to alert
others of Rich's intension to cancel cross posted spam. To the reply,
no one in this group considered this a form of censorship. Until this
reply. I don't think that the line is so fine. The spams are illegal.
If we infact do have the ability to control the flow of this material
into this newsgroup, then it should be done as a police effort, and
not tolerated. If I want to read about where to call for love, I can
go outside this newsgroup for that information.

My $'s worth.

Mike

I heartily agree with Dave's sentiments!

I had to learn Latin and French at school, & Irish (Erse/Gaelic); later
having to teach myself Late Latin, Hebrew, Greek, Italian, German & Spanish
to read for my specialtity, and later some Scots Gaelic and Doric (eh?).
I have forgotten almost all of it! Anyway, that was before the words
"computer" or "digital" entered public awareness. A recent stroke has made
even English difficult! I am wearing out my new German dictionary while
struggling with these wonderful non-English programs.

Love you all: German, French, Swedish and other guys programming for
us Atarians! Keep it up!
Charles.

4238. Need Advice about SpeedoGdos HP540 Driver

Newsgroup: comp.sys.atari.st
Date: 1996-12-07 00:00:00 UTC
From: "Paul W. Kasameyer" <kasameye@ix.netcom.com>
Message-ID: <58cout$kkf@sjx-ixn8.ix.netcom.com>
Source record: 132375

I am trying to get an HP 540 deskjet printer to work with Atariworks.
I have found SpeedoGdos drivers for the HP660 and for an earlier HP
Deskjet, but they do not work with the 540. Does anyone know how to do
thi?

Please respond by e-mail, as I don't always read this newsgrouop.

Thanks in Advance

Paul Kasameyer

I use gemulator96 and NVDI together and discovered a quick trick.
Set the pointer in the nvdi.inf file for fonts to Windows\fonts and you
will have the same fonts available in your emulated atari as for your
windows programs.

STOSSER WWW Page Update

Added ATARI Computing Logo, Why not grab and put on your own site?,
It came from AC for exactly that use :)

Added Counters to most pages,

Some Cosmetic changes,

I have to say that 48 Copies of Diamond-Ice have been downloaded
since Monday, thats 5 Full days ago, not bad:),
But dismayed that only ONE <1> person has emailed with comments? as
requested in place of actual payment,(Thanks Jim Petit), this is of
course not counting comments recieved from regular contacts,
One comment after 48 Downloads?, Please remember we are not asking
for anything other than comments, no money, no nothing, it is FREE
software, all we wanted was comments?,

Does this mean no one liked Diamond Ice?, :(

NEXT GAME: Donkey Kong Country Clone.
Hopefully released at the
UK ATARI shows in April 97

Cheers.............!ynoT

: 4 minutes. (For Each Page!) After 1 page was printed, PageStream would
: recreate the page before printing again! So to print out 25 pages it would
: take at least 1 hour and 40 minutes not counting the actual printing time!

One thing that I do to save time is to print to a file rather than to the printer, and then copy the file to the printer on the desktop. Double click on the file in a dirctory window and you get the usual show/print dialog. Select print and the pre-created file goes to the printer.

You may have to do this 25 times, but it will probably take a lot less time than Pagestream.

Everything over and above the German market is "found money"! All they would have to do to get it is agree to have the rsc and docs translated! Might be a little easier if they made them with seperate rsc files though. I just bought NVDI4 and the assign.prg and associated files are all still in German! My son is a Student of International Studies Specializing in Germany. He can make out enough of the German computerese to play a game written in German, but even he won't try to use Hard drive utilities written in German and can translate with enough certainty to use the assign.prg without the possibility of making mistakes! And I am sure that many of you will agree an assign.sys file is a lot less vital than messing with your hard drive!

>>German is to you, Hallvart.

>
> What do you mean "No dialtone"? You don't hear nothing, or the modem
>sends you the message "NO DIALTONE"? If it's the first, try playing with
>the L and M commands (AT L3 M1 perhaps).

Argh, it seems I haven't express myself quite well.
What I really mean with "No dialtone" is that the modem simply refuse
to dial, so it has nothing to do with not hearing the dialtone.
After ATZ ---> the diodes of the modem flickers
OK
I get immediately ATDT123456 ----> no action of the modem
OK
and than after a while
input line: cwait 40000 "CONNECT" "BUSY" "NO CARRIER"

after a certain wait the whole operations start all over again.
(obvious ofcourse as I configurated the script to try 5 times to make
a connection)

>
>
>>Using the same script with my old modem work fine.

>needed: have you tried an AT &F (or &F1) &W to reset the factory params
>then save them to profile 0...

Following your advice I've changed a few things but still the same
problem.

BTW: The modem is connected to the serial 2 port of a TT030. The speed
is set to 115200. According to the manual of the modem, the modem
supports speeds up to 115200.

The Hawk went out for beta test a couple of months ago, 70% failed. Custom chip problem. Question, is it a chip design flaw or a manufacturer problem? Tha thing about the Hawk was that is was/is supposed to move TOS to 32bit RAM and use another 030. The 030 in the Falcon is a custom one and apparently no info on this chip was ever leaked. Kind of makes it difficult to make a accelerator ehh?

About 200-400 Barracudas were made (according to sources) never released (why) One is required to move TOS to a new EPROM and in the process kind of rewrite TOS 4.XX to allow the audio programs to work. This is a copywrite violation and here in the US they would loose their shirts. In Europe its a different story as Atari is nill there now. And of course they offered some cash to buy TOS and not license. And of course C-Lab has some rights to te Falcon.

But there is a rumor some Barracudas were quietly shipped to their European distributer. I think they are the only ones still making a memory card.

I don't work for them.

That is exactally what I was told, except for the secret shipping
of Barracudas.

I wasn't really trying to dog on the company, they have fantastic
products. Just maybe hold true to a few promises. I realize
some of the plans they had may have cost to much to
impliment, but hell, just a progress report here and there
would be nice. (RE: Newsletter, Web page ect..)
They are not alone with hardware manufacturing
problems on the Falcon. Everyone else has teethed
as well.

Mike

Dragging A over B tries to do a disk copy, but it will only do a Standard format disk! Format a disk to the same no. of tracks and sectors as the one you want to copy and drag either the files in the open window to the drive icon of the other drive or the drive icon into the open widow and do a file by file copy! The other option is to use something like fcopypro that is smart enough to format the new disk the same way as the old one, while it is copying the data!

On Fri, 6 Dec 1996 gerome@delphi.com wrote:

I'm beginning to get fed up with getting STik to work. I have tried everything I can think of to get STik to work with no luck. CAB just gets stuck "receiving data (0 bytes)" and NO page. I have:

A Falcon w/14 mb ram
MagiC 5.03
NVDI 4.11
HD driver 6.0

STik 1.12
CAB 1.5 (030 version)
cab.ovl 1.20 date (june 28, 1996)
Antmail v0.7.9
MG-FTP 1.03

nothing works, I think the problem is with the network stack STik. Someone please help me with this problem, so I can browse the web and use FTP with my Falcon! Please reply via email. Thanks

Jake Goerzen

> I am getting a message that disk "b" is not the same type as disk "a"
> when i try to make backup of logic program. The disks are the same, it
> has nothing to do with logic ....i get the same message trying top copy
> anything I am using the copy program in desktop ..just dragging disk "a"
> over disk"b" following the prompts correctly..??

The both disks must be have the same format. If the first disk has 2 sides
80 tracks and 18 sectors/track (HD disk format), then the second one must have
the same format. If they haven't the same format, you will get the error
message "...is not the same type as..." (for instance if you try to copy
a 2sd 80trk 8sect/trk disk onto a 2sd 79trk 10sect/trk. They haven't the
same caracteristics.)

Some softwares (Fastcopy 3...) do a fast format (of dest. disk) "while"
copying. (In fact, they format track #1, copy, then format track #2, copy...)

Hope this helps
Jeremy.

Well I'd have to reccommend Geneva, it only takes about
200KB, and it is very stable. It can also tie in with MiNT,
so MiNTnet, CAB for MiNT is a good bet. Unfortunately I speak
with no experience with MagiC, but I here it is fast :^)
I don't know how much memory MagiC takes!

Yes, you need to get an image of TOS and copy it to your root directory of your pc...you must rename it Magic_pc.os.

I found a program on the internet that will allow you to get this image. I have not tried the program, but I have tried the swedish tos images that they have for download and they do work!

Go to the following web page:

http://www.edu.isy.liu.se/~z94patsa/jsdata/jserver.html

just in case I included a typo in that address, you can alternatively use yahoo to search for The Jaguar Server Home Page. They include these programs with the intention of allowing you to develop jaguar games from your pc!

4270. Falcon and Cubase

Newsgroup: comp.sys.atari.st
Date: 1996-12-07 00:00:00 UTC
From: nam101@york.ac.uk
Message-ID: <58adtj$hre@netty.york.ac.uk>
Source record: 132425

Hello

I've found myself a little corner in which to do some sequencing. I've found a dongle and cubase (v2, but it will do). I've found a Falcon which was gathering dust under a pile of st's. I've even found a nice new Kurzweil K2000 which isn't (yet) being used (probably because no-one has time to read the manual).

The trouble is that the cubase kit works fine on the st's (which are all 1Mb, so a bit tight for anything useful with cubase) but it doesn't work on the Falcon.

Does anyone have any idea why not? Surely I don't need a new version of cubase.

(I know about the DSP, but all I need from the Falcon is sequencing. We use sgi workstations for 4-channel realtime audio processing; the Falcon looks a bit pale beside them).

Thanks in advance.

Best wishes

Message-ID: <19961207070900.CAA09918@ladder01.news.aol.com>
Source record: 132427

FOR SALE AND PRICED TO MOVE QUICK:

Atari SLM804 Laser printer with phantom modified interface,
extra paper tray, and an almost new toner. The phantom mod
adds power to the interface so that the printer can be powered
off and still hooked to the DMA chain. Without the modification,
an SLM needs to be powered on or a connected DMA hard drive
will not work. I am asking only $95 for the whole setup,
plus shipping - a real bargain! I hate seeing it in the box sitting in
my house when somebody out there could be getting use out of it.

I live in California for shipping considerations.

If interested, please email me at RJRE@AOL.COM

4273. Animation JPEG's

>There are no "animation JPEGs" on the Web. And every JPEG is compressed.
>If you want people to know what you're talking about, you'll need to
>use the correct terminology; this ain't it. I'm guessing that what you
>really mean is progressive JPEGs.

Hi Tom,

Thanks for the post. I'm a bit amazed you found this obscure post, but thanks
for the reply. Your right, I should have said "progressive JPEG".

>> You might try http://www.word.com/gigo/ and click on "Kittens". You'll see
>> a bunch of floating eye's. Click on these and see what happens...

>Those look like perfectly OK progressive JPEGs to me. A little bit
>avant-garde, but most mainstream browsers have been able to read them
>for a year or more. Time for CAB to get on the stick, no?

A year or more? Is that one or two life times? They look like progressive
JPEG's, but are they?

When I couldn't view the JPEG I did a hex dump and they DO look like a
standard JFIF standard file. (hex) FF D8 FF E0 00 10 etc.

Yes, it would be nice if CAB could view these JPEG's and the reason I mentioned
Animation was to invite comments on the subject. Would you say that Animation
JPEG's are impossible? Six months from now will Animation JPEG's be on the
Web? The web site mentioned above *IMPLIED* movement, but I couldn't see, so...

>For more info see the JPEG FAQ at
>http://www.cis.ohio-state.edu/hypertext/faq/usenet/jpeg-faq/top.html

A note there at faq2 mentioned 1st guide v96 could view p-JPEG's. Not for me.

> regards, tom lane
> organizer, Independent JPEG Group

Tom, I'm not sure if you have an Atari Computer, but if your willing to help
I'm sure the CAB developers would give you a good Benny Hill Salute' :)

Make sure you are using a font that supports the ANSI characters (ie the supplied CoNnect fonts) and also change the option in compatibility settings from CoNnect ANSI colors to PC ANSI colors. Also, you need to have the color pallette set correctly, this can be done with teh color settings dialog. Just double click in the large box on the left to set them to ANSI standards.

>their issue 2s yet?

I think you've started panicing way TOO early! We are not 'WELL' into
December at all (it's only the 6th day when you wrote this, at least wait
until half way through the month eh!)

The people producing the magazine are doing so in their free time and are not
getting a penny for their work.

Panic stricken comments like the above aren't necessary and are unfair!

Yeah, the issue 1 situation was a total farce (IMHO) but then I got my copy
at the show, so what do I care :)
What they should have done when they knew there was going to be a delay was
posted a warning message to these groups. They didn't but have probably
learnt a valuable lesson!

Issue 2 is due out early December. I personally wouldn't start panicing until
Christmas time.

Give 'em a chance before complaining. I expect it issue 2 will turn up any
day now <g>

'Early' December is rather vague but I'd say it give's 'em until the 15th at
least!!

Gary.

Tony Greenwood (stosser@airtime.co.uk) wrote:
: using GEM with all the know alls telling me it would then work on
: every machine, Then when you do manage, you will get people moaning
: that they need backwards,
I have noticed that there is a certain element which seems to think it has a right to the FREE software that is EXACTLY what they want for their machine. Remember most Atari software is written by hobbyists for the love of it these days and some of the responses here will certainly put people off.

e.g.
"STFM Program X is no good as it doesn't run on my TT with Tos4 & super cache"
"All that long list of improvements to the package is all very well but when will you make it work on my config XXX ??"

I can't believe how rude and nasty some people have been to fellow Atari Users who are trying to keep the platform going. There are a lot of good programmers - lets not lose them by forgetting a bit of politeness now and again.

Also why do programs have to be compatible across all ATARI's??
If you want to use a program why not make your system more compatible??
Its a two way thing.

: Unfortunatly you will HAVE to take it more than me, ten quid for a
: tetris clone and people have the right to moan, they pay so they get
: there say,
Oskar Burman of UDS wrote a PD version in STOS a few years ago (SIRTET) and it is single player:-(but apart from that is all you'd ever want from a TETRIS game :-) Will try out Super Tetris when I have time. Thanks for putting the effort into writing, releasing and supporting it.

I count myself as one not in favour of censorship here.
Just because we don't like someone's opinions is not reason enough
to close our ears/ eyes to their outpourings. Even sinclap has a
certain entertainment value (I think he/she is a joke).

What we need protection from is mechanically produced noise
such as that which we recently experienced. I don't want to see
the same article reproduced 50 times in every news group that I
subscribe to.

I agree that innappropriate x posts are a problem but as I have
read many times on usnet the title usually gives them away so
you don't have to waste time reading them.

Some where there is a fine line between noise elimination and censorship
that will satisfy most people. Thats my 10c worth.

Hoi,

I've seen the second issue of AC last week at the Atari show in
Dusseldorf. I also have a quick talk with Joe Connor. The subscribers
should have their copy quite soon now (if not already). It contains
lots of very usefull articles.
So don't panic.

Hope this help
Martin

ae@zen.kuai.se (Anders Eriksson) wrote:

>Without bots, you would probably never get into #atari. Becuase it seems
>to be one of the absolute favourite channels for "takeovers".

I cannot agree with you on that. It may seem that to you that #atari is picked on, as you are there, but trust me - #christianrom on effnet used to have more than it's fair share of attempted takeovers (none of which lasted very long as they were quickly squandered by expert IRCers). I consider people blaspheming God more rlevant and important than a few lamers saying "Amiga is better than Atari" or whatever.

You are right that a bot can "protect" a channel but at the end of the day, certainly in the case of #atari, it's just a bit of fun... isn't it? Am I missing the point? Is is more than that? Is IRC the be all and end all for some people? Maybe it is!

When #atari was taken over a few months ago there was no problem, for we created #atari2. It is not difficult is it? Which bit of "fun" don't you understand? ;)

>S0meone/Tb seems to take care of that problem pretty well, and in my
>opionion everything works pretty well. But I can agree that "Atari Suxx"
>giving a kickban might be a bit rough, I'll speak with tmc about that.

Well I simply said "suxk" (yes, I regret mispelling it but that is what I wrote when I got kicked and banned) and was thrown out. I used it in context of my FTP transfer rate. No human ops meant I was banned and unable to talk to my fellow chaps via #atari. I was more than a tad annoyed. Not just at what happened but the entire concept of no human control.

I know that the op list was frastically cut, most definately correctly, but maybe the wrong people were added/omitted (ie too few people on it) and some of us regulars were at the mercy of, let's face it considered the word it objected to, a poorly written script. No I am not an op begger but I feel it is important for people who stay for hours on end, who are trust worthy. to have ops. When I was K & B there were at least three people in this category.

Perhaps the only way round this is to sort out TB. I suggest: lose it, have a BOT which is maintained by a regular, someone moreso than TMC. Maybe s0meone as Flinny (hi Nick!) is pretty regular (I mean on #atari, not in the loo!).

Create a list of "mature" IRCers who can be trusted with ops, not to op peopel "willy nilly". AtariBot has a good list of such people, IMO.

There was no problem in those days.

Come back Radak!!! Please!!!!

Remove all stupid work binding, the Bill Gates thing was silly but the suxk think is plain idiotic. A bot should never BAN anyone, IMO, unless a human has told it to or they are on a ban list set by a human.

All the opinions expressed above are MY opinions, nothing more.

For the moment, we are having a great time in #freeatari and I am glad that normal service has been resumed here. We have fun!!

Please email all flames to someone@who.gives.two.hoots :-))

First of all, that is an illegal URL, the prefix if ftp:// and nothing
else.

Secondly, when using a ftp:// URL from a browser it simply acts like a
FTP client, and Bobby said that he couldn't FTP.

Check the DHS WWW links page, http://www.kuai.se/~ae/ for some liks to
Atari sites, there might be a few sites there with http:// downloadable
files.

>>
[snip]

Hmmm. I just found one, too!

I just dled the morphing demo, "dform_fr.lzh" (400+KB), from paderbourn.
When I tried to de-arc it, using DC Xtract, I got a messasge reading,
"Bad entry in this file." BUT...

The only file listed in the verbose file-list box was, "dform_d.pax",
at about 80+KB. (Needless to say, the morpher demo failed to de-arc).

Maybe someone who has successfully de-arced "dform_fr.lzh" can tell
us if the file "dform_d.pax" is indeed part of the package. And, if so,
does it have something to do with Gemview or something else.

Curious,

Bob

It doesn't have to be. Michael Schwingen wrote an excellent tool for
that job. It's called `rsctrans.ttp'. Look for rsctra11.zoo on almost
every Atari ftp site.

It is spoken more than English or French.
See an Atlas about the populations!

French: France, half Belgium, smaller part of Switzerland
English: UK, Ireland
German (without Dutch, of course): Germany (80 Mill), Austria, big part of
Switzerland, small part of Belgium (around Malmedy), small parts of Poland
and Bohemia

It is really more than English or French!
This is why I still don't know why they are making French the official EU
language!
I'd prefer German (because it is the most spoken) or English (because it
is more
spoken in the world).

Second reason is that I use these two languages at home and do not
speak French as well... :-)

```
================================================================================
UK Supported Software by Joe Connor
--------------------------------------------------------------------------------
About the scheme
----------------
The Supported Shareware scheme was set up by Joe Connor to encourage
authors of German/French etc software to produce and support English
language versions of their software AND to encourage UK users to register
their software.

Benefits for registered users:
- Key to access registered user only features or remove the Shareware
Intro screen (some software only)
- Access to the free update service
- Labelled Master disk
- ST-Guide illustrated on-line catalogue of supported software
- ST-Guide on-line help (some software only)
- Selection of other software (dependent on disk space)

The Shareware fees are set to cover the currency handling, stationary,
media and postage costs incurred in mailing out master disks. Support for
users in other countries is available, details on request, please feel free
to ask or get involved with translation or support in other countries if
you are able.

The currently supported software is:
--------------------------------------------------------------------------------
Version Software UK-Fee Description & status
--------------------------------------------------------------------------------
V1.73e Kandinsky ï¿½15 [S] Vector art using GDOS/Speedo/NVDI3
V1.10e Selectric ï¿½13 [S] Alternative modal file selector
V1.22e Two-in-One ï¿½12 [S] Archive manager, twin selector style
V4.8 GFA Flydials ï¿½13 [S] Enhanced GFA GEM routines [G]
V1.05 GFA Shell ï¿½ 6+ [F] GFA Shell [G]
V1.04e GFA Patch ï¿½ 6+ [F] GFA patch for compiler
V3.4e Everest ï¿½10 [S] Text editor, fast and ultra compatible
V2.4i ï¿½gale ï¿½10 [S] File compare, edit and patch editor
V5.4 GSZRZ ï¿½16 [S] XYZmodem protocols [ACC/PRG/030]
V1.3c OCR ï¿½8-12 [F] Optical Character Recognition
Release4 ST-Guide ï¿½ 6+ [R] Hypertext help system [ACC/PRG]
V2.59 PacShell ï¿½10 [S] Archive manager, alt. desk style [GD]
V23.10.94 STG Creator ï¿½ 6+ [F] Create hypertexts the easy way!
V3.51 IdeaList ï¿½13 [S] Complete printer management [ACC/PRG]
V1.9e Adresse ï¿½15 [S] Name & Address database [ACC/PRG]
V1.41 Zorg ï¿½12 [S] Disk optimiser and editor [030]
```

V1.24e TurboBlanker ï¿½ 6+ [F] Falcon screensaver & accelerator [ACC]
V1.11 Freedom ï¿½15 [S] Alternative non-modal file selector [G]

Key: [S]=Shareware, [F]=Freeware, [R]=Fairware [G]=German, [GD]=German Docs
[ACC]=Accessory, [PRG]=Applcation, [030]=Includes seperate 030 version
==========

How to register inside the UK
---
1) Check the amount for the software you wish to register
2) Make a cheque payable to Joe Connor for the required amount
3) Be sure to include your name and address in a legible format!
4) Send cheque to UK Address below

65 Mill Road, Colchester, CO4 5LJ, England

Email: jconnor@cix.compulink.co.uk

How to register outside the UK

Different arrangements exist depending on the software concerned. There may
be an alternative local registration point or other conditions so please
refer to the specific documentation for details.

Update service

The latest versions are listed every month in the Shareware column of ST
Applications each month. To receive an update:

- Send a self addressed envelope including return postage and an
unlabelled unformatted double sided floppy disk. Please state clearly:

1) The software you'd like updated
2) The version you're currently using

Alternatively if you have Internet access you can use 'anonymous ftp' to
obtain the latest English language release version of all the above
software from:

micros.hensa.ac.uk in path: micros/atari/tos

Other sites may carry the on-line archive but minor updates to the English
language version are sometimes made without changing the version number.

4297. Falcon display problem - possible nvram misconfiguration?

Newsgroup: comp.sys.atari.st
Date: 1996-12-07 00:00:00 UTC
From: skr@dcs.ed.ac.uk
Message-ID: <E21rvL.263.0.staffin.dcs.ed.ac.uk@dcs.ed.ac.uk>
Source record: 132452
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

HELP!

I've just got a second hand Falcon - I've got it hooked up to an SVGA monitor.
A lot of software was pre-installed.

One of the CPX's installed in X-Control was a German boot config utility.
I can't remember what it was called.

The system was working fine until I reconfigured the display options with this CPX.
I selected VGA, 80 column, Real Colour, and selected a few other options which were in German,
so I don't know what I did.
I thought that it would be easy to reconfigure - like my STE.

However, upon rebooting, the display was a mess of lines and the monitor blanks it off after
a few seconds.
I can't even get it to work with a TV!

Does anyone know what I've done?
I've even tried disconnecting the Hard Drive and booting from floppy to no avail.

I don't know a lot about the Falcon yet.
What exactly is the nvram?
How does it work and what does it do?

Have I misconfigured this?

If so how can I reconfigure it without being able to see a displau in the process?
Ideally I need a program on floppy that I could stick in, autoboot and do the business.

Any ideas?

Friends,

If you're in or near southern Wisconsin, don't forget the December meeting of the Madison Area Atari Users Group, Tuesday, December 10, at 7 PM at the Madison Public Library, Main Branch, Mifflin & Fairchild Sts.

This month we expect to have a benefit sale of productivity software--new and never used--generously donated by a former Atari dealer. So if you're looking for a title or need a perfect gift for a fellow Atarian, come join us. With members from Milwaukee to Spring Green, we're keeping the Atari spirit alive in the Badger State!

User Group Meeting -- Ann Arbor, Michigan

The next meeting of WAUG will be held on December 10 at 7:30pm. This will be our annual Christmas Party wherein we promise to do nothing constructive or educational. There will be door prizes for members, munchies and refreshments. Rob Cable is promising a MIDI Maze tournament and is asking for volunteers to bring appropriate hardware. We are requesting that visitors and members alike bring along their favorite audio/video demos to keep us all entertained. Mike Olin (that's me!) also promises to bring his annual batch of Atari Carmel Corn.

A map to find us is included below. For more info about WAUG, hop on over to our web site at:

http://ic.net/~harvey/waug.htm/

or reply to me directly:

molin@atari.archive.umich.edu

C'mon down and enjoy a pizza with us!

It only stands to reason that where there's sacrifice, there's someone collecting the sacrificial offerings. Where there's service, there is someone being served. Make no mistake about it, the man who speaks to you of sacrifice is speaking of slaves and masters - and he intends to be the master.
-- Ayn Rand

-------------- begin WAUG Flier attachment ---------------

WAUG -- (Formerly 'The Washtenaw Atari Users Group')
(Now known simply as "WAUG")

What is WAUG? Over 12 years ago a few intrepid individuals decided to
============= start meeting regularly to share their enthusiasm and knowledge of computers and related hardware/software items. In June of 1987, after more than two years of unorganized and informal meetings, the members developed and formally accepted a club charter. Thus WAUG was born! Helping people get the most out of their computer is WAUG's purpose.

Initially, the club was dominated by Atari afficionados, however in June of '95 the executive board arranged to expand the club's resources to include IBM and Macintosh users. WAUG is an ideal place to meet with other persons who share your interests and to find answers to your questions about using your computer -- no matter what machine you own, how old it is, or your level of expertise.

Who's involved? Since its inception, members from cities outside Ann
=============== Arbor (including Westland, Canton, Livonia, Milford, New Hudson, Dearborn, Hartford, and even as far away as Toledo) have regularly attended the meetings. Some members live as far away as central Michigan, and one member lived in Montana (!) and joined simply because he enjoyed receiving our newsletter.

How do I join? Membership in WAUG has only one requirement: an active
============== interest in personal computers. Annual dues are $15, for which the member receives free monthly issues of the club newsletter, opportunites to win valuable door prizes, and reduced rates on disks purchased from the club's Public Domain/Shareware disk libraries.

What will I find? A different topic is featured each month: Printers,
================= Education, Telecomm & the Internet, Beginners Woes, Desktop Publishing, Scanners, Swap Night, MIDI & Music, and Utilities are typical examples of what you'll find when you visit WAUG. Drawings for door prizes take place at every meeting, and the annual Christmas Party Meeting is not to be missed. There is no dress code in effect at any of the WAUG meetings -- tuxedos and ballroom gowns are perfectly acceptable. (However if you choose to wear these, we WILL stare at you!)

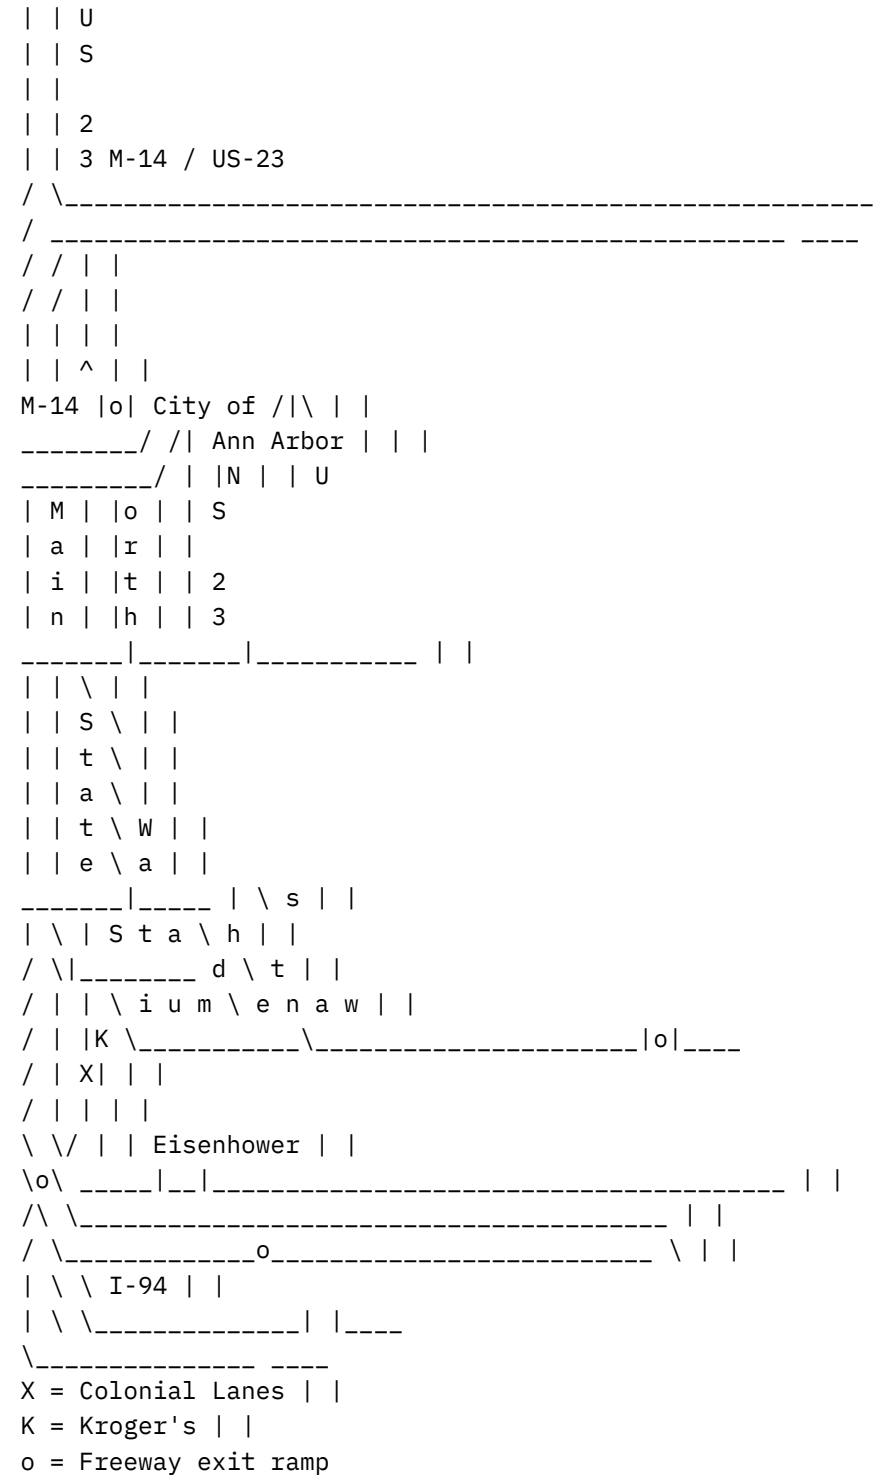
How to contact WAUG:
====================

WAUG
14 Payeur
Ann Arbor, MI
48108

Voice: 313/971-8576
Modem: 313/971-6035
E-Mail: molin@atari.archive.umich.edu
harvey@mail.ic.net
WWW: http://ic.net/~harvey/waug.htm/

or just show up at any regular monthly meeting! Visitors are welcome and we promise not to pressure you to join until we've seen your face at least three times!

Where does WAUG meet? Meetings are held regularly on the second Tuesday
====================== of each month at Colonial Lanes located on South South Industrial St. (across from Kroger) between Stadium and Eisenhower streets. Meetings start at 7:30pm and usually run to approximately 10:00pm.



Travelling on US-23: exit onto westbound Washtenaw
(northbound) stay left at Stadium
turn south onto South Industrial

Travelling on US-23: follow M-14 West "To Ann Arbor"
(southbound) exit onto southbound Main Street
turn east onto Stadium
turn south onto South Industrial

Travelling on I-94: exit onto northbound State Street
turn east onto Eisenhower
turn north onto South Industrial.

By far the best I have found is a program called RUFTRADE. It can be
found IIRC in its latest demo version on HENSA. It is a Demo version
limited in file size, but an upgrade to a full version is only $5 US.
It is only a word for word xlator, of course, but it does have some
selecting mechanism for contextual choice of translations.

4308. More STik problems! Ach!

Newsgroup: comp.sys.atari.st
Date: 1996-12-07 00:00:00 UTC
From: dogmeat@netcom.com
Message-ID: <dogmeatE2222p.H94@netcom.com>
Source record: 132463
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

ALL!

More fascintating updates on Brett's STik problems!

Thanks to Rich Tietjins at Teleport, I am no longer doing the
following:

"Given the dial.scr you show here, your system is going to think it
has the same IP address as your server. That is Not Good<tm>"

Thanks Rich!

Now at least my system doesn't report '68000 errors' or refuse to
find even local links. And with the change to the MTU setting mentioned
below, ATARIRC and AntMail seem to recognize Stik, but either claim to be
off-line or lock-up completely when sent t o do their job. CAB simply
reports a blank page or locks up...

My friends at Fog.Net, my ISP, have provided the following info:

From: Mike Miller <mm@fog.net>
To: dogmeat@netcom.com
Subject: Re: Your Message Sent on Fri, 6 Dec 1996 22:55:56 -0800 (PST)

User-Service-Type = Framed-User,
Framed-Protocol = SLIP,
Framed-Address = 255.255.255.254,
Framed-Netmask = 255.255.255.0,
Framed-Routing = None,
Framed-MTU = 1006

These are the SLIP set up parameters. MTU can only be set as high as 1006
not 1500. Try that! Mike

This is my current DEFAULT.CFG:
ALLOCMEM = 150000
SERIALPORT = Modem 2
CDVALID = TRUE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 1006
DFB_SIZE = 580
PROTOCOL = 0
RCV_WND = 5360

```
UP_RESPONSE = 2
USERNAME = *******
HOSTNAME = fog.net
FULLNAME = Brett Nair
NAMESERVER = 206.155.44.10
NAMESERVER0 = 206.155.44.3
IRCNICK = {nonick}
IRCSERVER = {noserver}
IRCPORT = 6667
IRCPONGMSG = Slow isn't it?
```

Rich Tietjins also said to " Also verify with the support folx at
your ISP that the VJ flag is turned OFF for your account."

But Mike and Pat at Fog.Net have never heard of a VJ Flag...

HELP!

Any suggestions are much appreciated. Thanx!

PS. I am using the WWW131 internet pack with Stik 1.11/CAb1.5/OVL 1.18on a
TT/030 2/4meg with Magic 4

4309. The #atari incident !

Newsgroup: comp.sys.atari.st
Date: 1996-12-07 00:00:00 UTC
From: Ade@finitive.demon.co.uk
Message-ID: <850066944_OASIS_@finitive.demon.co.uk>
Source record: 132464

Hi Folks,
Hmm well lots of people have had their say, even some of them that shouldn't, but here's mine ... and hopefully help some of the people that just don't seem to be able to understand why we did it, I don't mean they have to agree just understand, believe me some that totally disagree with the situation at least understand the `philosophy' behind it!

I apologise now for the length of this, (it was longer!).

I've always seen the internet and irc, a place where anyone can go whatever there point of view, religion, colour of the hair, nationality or if they talk to chickens or not, so why is it that for saying a silly word like sux or similar would get a few people banned from an open forum channel like #atari ?
Obviously due to some ones lack of thoughtfullnes to anyone, believing the way he thinks and his views should be forced on everyone! Banning some one for saying a silly word, kicking some one is bad enough, but being bad is really beyond anything !

After a discussion on #atari some of us decided that with the bots in the current state it wasn't much fun anymore, so set up a new channel, if you want to talk to us there it's #freeatari.
This is a place where the bots are not disrupting our enjoyment of irc. After a very enjoyable evening last night on #freeatari, I realised how much I missed the days before the bots, and how much fun can be had without them, yes there isn't much they stop you doing but what the heck it was fun, no one complaining about ops either, there wasn't an op on the channel, (more of a mistake than a decided action!)...

You may ask, `Why go to another channel ?', well at first for me it was a statement, now its enjoyment, I'm not saying we shouldn't have bots, but the only way I wanna know bots are there is if I look who is on channel, they should be completely discrete, not mentioning everyone that comes on channel, you get told that anyway, and if the user wants a silly message or summat when they log on, he can set it up on his machine or type it in each time, instead of having 2 or 3 bots telling us ! And other commands can easily be done in two way messages instead of cluttering up my screen !
Well back to the question ..... well #atari is/was like a big party for us all, and you all know how at big parties you've quite often got some people who smoke and some who don't, now the non-smokers often sit together in another room or a way from the smoking crowd, or it can be the other way around (especially if a stronger substance

is being smoked!), well I see us a bit like that, trying to get away
from the smoke, or me personally one really heavy smoker, who smokes
those really smelly cigars (TB), so we're sitting away in another
room, the smokers (other users, bot owners) come in and still speak
to us, without there smokes of course and ofcourse we are not, and
really can not and would not stop them from being on #freeatari
(without the bots!).....

So do still say hi, and thanks to those who agreed with what I've
been saying about us being able to say what we want there!
Thanks for those who have listened all this way and look
forward to your replys..
Ade.

Help? Buy Calamus. Plain and simple. I bought Pagestream first, 5 years ago when I bought my TT, and then I bought Calamus just to check it out. I will admit, there are some things about Pagestream that are desirable but the program will never come close to the speed, accuracy, and power of Calamus.

Before anyone shoots me down on how hard Calamus is to use, think about this: I publish (quarterly) a 112 page magazine (total file size of over 100 megs) and when I have a page with say a 10 meg .tif file with text etc. it will print out in under 2 minutes WITH page creation time included.

The other good thing about Calamus is that there are still updates being made for it, and it is still supported here in North America...

One last thing, here's a good example of German software being bought and supported in English!

> because it makes programming next to impossible.

I thought the Mac was capable of defragging its memory (although perhaps
not
programs). Also, doesn't the Amiga allow even programs to shift around?
(This information was from a slightly unreliable source)

You *could* actually do this, if there were calls to lock and unlock
blocks
of memory AND the memory allocation system returned pointers to pointers
(i.e.
memory block handles). It is then possible to defrag the computer's
memory,
since all blocks currently in use are marked as immovable, but the
pointers to
the others can be changed at will by the OS. The lock memory block
function
can return the actual address of the block.

I know that someone will now proceed to point-out that the memory block
handles
have to point somewhere... and they're right, they do. But you can grow
this
list downwards from the top of memory (which, if your allocator is
programmed
to favour lowest blocks first will avoid the problem); obviously these
areas
should be locked by the OS.

From: none-set <76031.1247@CompuServe.COM>
Message-ID: <58epa3$8rf$1@mhafc.production.compuserve.com>
Source record: 132268

I can understand the individual non-English program not writting a english version, but its when you have a software company like R.O.M. (Papyrus) they farmed out the english translation and it took forever. Version 4.xx is just making it to North America and Version 5 has just been released! (in German)

Also the very nice Calamus modules from Adequate Systems are only now being translated and thats being done in Canada (I think).

I would think that between the UK and North America there are still enough Atari users that would buy a english version of a foreign language "commercial" program.

just my 2 cents

Rich

Okay, I use a program called FANSI (Eric March) on my Mega ST to make ANSI screens for my BBS...(see Sig) If I use anything other than the straight characters/block colors, CoNnect shows them up as ASCII on my Terminal...I've played around with the settings no-end and it has not helped. I've just been making very plain ANSI screens instead. It would be really nice to make screens with all of FANSI's tools and be able to see them on my Atari's! :)

4315. Want more about Phenix?? Let's go...

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: jeremy@worldnet.fr
Message-ID: <961208Z232306.116jeremy@worldnet.fr>
Source record: 132270

On 7 & 8 December, there was the 2nd "Forum des Applications Atari" in Paris. Centek was there. Many of us has been able to ask for some informations about Phenix to the technicians... What about the 120Mhz 68060 processor???

The 120Mhz 68060 is a *REALITY*, one of the most important Centek technician hardly said me he has seen it! This 120Mhz 060 doesn't seem to be a joke. Some people say that Motorola is working on a 68080 for future, but some other say that it already exists, and that it is used by Thomson into professional computers!!!

The first Phenix which will be available is 68040 66Mhz version, and can be easiy updated to 68060 120Mhz. 060 costs ~$500 (2500 FF), and 040 costs ~$180 (900 FF). So, the update will only cost ~$320 (1600 FF). It is planned that Phenix will be sold in France, then Germany, England, USA...

PFM (Power Falcon Mag.- O. Heissler) adds the following:
--
040 Processor / Falcon's 030: 12 times faster.
64 Mhz / 16 Mhz = 4 * 3 (3 times faster at equal freq. - 16 Mhz)
060 Processor / Falcon's 030: 67.5 times faster.
120 Mhz / 16 Mhz = 7.5 * 9 (3*3 times faster at equal freq. - 16 Mhz)
The 060 Processor is 3 times faster than 040, which is 3 times faster than 030 at same frequency.

The clock frequency is said 'internal', 16 Mhz for Falcon's CPU, and 64 or 120 Mhz for Phenix.

Which gives the following:
for the 040 Phenix/Falcon: 2x12 = 24 times faster in theorie.
for the 060 Phenix/Falcon: 2x67.5 = 135 " " " "

But for the 060, this calculation is wrong, because [...] its architecture is said 'superscalar', it can, if the code is optimized, do two instructions on integer + 1 instruction on float/cycle, which means that [...] the CPU gain has to be multiplied by 2 minimum (270).
In order to make you be taken aback, go and multiply 060's performances by 10 and you'll have 080's performances (2700)."
--

DOLMEN OS is getting very interesting. It will be entirely TOS compatible. All TOS routines will be re-coded. It will include TCP/IP layer, sound & animation players, images, HTML, JAVA viewers, icons editor...

Regards,

I'm astonished! I thought only AtariWorks behaved that way.
I have no probs with Pagestream (v2.2 uk) on a TT: it creates the page
only once, then prints as many copies as asked without further ado -- or
sometimes crashes, of course!
I wonder... is it the version of printer driver? Or is it the actual
printer itself, whose software controls have got mixed up? Must try and
dig a bit deeper.

Charles.

In <849570754.12730.1@f030.demon.co.uk> Andrew Wood wrote:

Hallo

The trouble is that this leads to a second 'refresh' page before arriving
>at the main index page. If you then try and follow a link, CAB says it cannot
>find the page in its cache.

Yes that's here the same. When you look at the Info-Line of the CAB-Window
than normally is the entry of the Page. e.g.: http://www.babylon5.com/

When it changed after a few seconds, then the entry in the info-Line isn't
anymore a http: Entry. Then there is the entry a cache-entry e.g:
F:\WWWCACHE\A\00000ACF.HTM

When you now klick on an link with "../more.htm" then CAB want's to change
only the actual directory and load the file more.htm. But there is no file!

Hallo Alexander are you reading this? Can you fix this little bug?

greatings Michael

This message from info@infoman.demon.co.uk to All came in on a wing and a prayer...

Hi Richard,

i> Does anyone know who can fix these in the UK and is there a magazine
i> for ataris?
Amongst other companies System Solutions 0181 693 1919 operate a repair service, they also sell a magazine called Atari Computing which is also available on subscription both in the UK and in other parts of the World

The current issue is #2.

Here's the subs form for you (or anyone else in the UK):

.....snip.....

RS> Are they still the same as the last figures you sent me?

If you mean the address and the cost then here is another copy of the subs form for you or anyone else. The figures on it are for 3 issues. If you want to subscribe for 6 just amend the form before posting, and double the prices :)

Atari Computing Subscription Form

Please send me 3 issues of Atari Computing starting with issue_____

(please tick box where appropriate)

Subscription UK EUROPE USA
OTHER

Magazine only £ 9.00 [ ] £11.50 [ ] £12.00 [ ] £13.00 [ ]
With Reader Disk £15.00 [ ] £17.50 [ ] £18.00 [ ] £19.00 [ ]

********** All prices in UK Sterling where £ = British Pounds
****
Name:_____
_

Street:_____
_

Town:_____ Postcode:_____

Country:_____

Telephone:_____ E-
Mail:_____

I enclose a cheque/postal order (UK), Sterling Eurocheque/Post office payment (Europe), Sterling Post Office Payment/International Money Order (Commonwealth) or an International Money Order (rest of world) for £_____

(Please circles as appropriate and make payable to the 'Atari Computing Group')

DATA PROTECTION ACT 1984: I consent to The Atari Computing Group holding my subscription record on computer. I also consent to this information being disclosed to other members of The Atari Computing Group. Your entry is available for inspection under the provisions of the UK DATA PROTECTION ACT 1984.

Hi Ray, on 07 Dec 96 you wrote: ...respect, brethren

r>
r> I have a panther graphics card. Anyone had any luck getting it to work?
r> What do I tell nvdi for et4000?

Run VMG-4000 to create a NVDIVGA.INF file that matches the limitations of
both your monitor and graphics card - create different resolutions for each
colour depth.

Place the resulting file in your Auto folder - that should basically be
enough after you've installed NVDI ET4000 in the usual way.

I can't remember a lot mor of the critical details at the moment - where does
your problem seem to be?

> A note there at faq2 mentioned 1st guide v96 could view p-JPEG's. Not for me.

Well, I just checked this and, oops, found that 1stGuide in fact failed
on
these files, because they are *Greyscale* Progressive JPEGs.
Fortunately, I immediately found the bug (uninitialized variable ->
bomb...)
and thus could solve the problem. You can grab the fixed version from

http://www.esc.de/homes/guivol/1stguide/

I'll also update other sites where I have access to as soon as
possible...

> Tom, I'm not sure if you have an Atari Computer, but if your willing to help
> I'm sure the CAB developers would give you a good Benny Hill Salute' :)

Unfortunately, CAB is developed in Pascal, and thus hardly supportable.
I offered support to Alex, but he insisted on development in Pascal,
and thus I can't do anything, sorry.

Tom Lane just told me (and I remember an announcement in the IJG mailing
list)
that there is a (Turbo) Pascal port of the current IJG code (with
p-JPEG).
But anyway, for me it isn't acceptable this way, because I'm interested
in efficient *and* portable (platform-independent) software.

BTW, I've agreed with Tom to maintain future Atari ports of the IJG
code,
since the person who did it so far gave away his Atari.

You wondered that Tom Lane stepped in here: I'm sure he doesn't read
this

group, but there are Usenet search engines (Altavista and Dejanews)
where you can find any articles with certain topics.
In fact, I also do not read this group (search my name in Altavista -
"Usenet" or make an "Author Profile" at Dejanews to find out where I'm
usually lurking :-) and stepped just in due to a search for 1stguide/
1st-guide.

Now have fun with the kitty pics above... (Note JPEGD-users on the
Falcon:
You must turn this off, since JPEGD doesn't support p-JPEG at all.)

Regards,
Guido

English, German & French! I agree whole heartedly those languages are the three prominent languages in Europe today. However I would like to address some of the points brought up in this thread, points that stink of both colonialism & narrow-mindedness.

1st let me approach the statement made about French & English being the two official languages of the EU. They are also the two languages used by the United Nations. Many governments use these two languages in diplomacy when their own language is not as widely known on a global basis. History had a large part to do w/ this. Both France & Anglo-saxon countries such as the UK & the USA have all played a large part throughout history as world leaders & their languages are just as widespread as their affluence. I know that the world cannot dwelve entirely in the past (luckily for Germany), but so far as international relations stands right now, French & English have a dominent place in the world. Perhaps countries who are leading us into the new computer age will change that...we'll all start speaking Japanese :).
Secondly, regarding the remark about atlases, I find it very easy to pull facts out of a book; the essential idea is to analyze that info to have a more wholistic view of things. It is not "criminal" to not learn German, or French, or English. IT IS unfortunate that people don't seem to realize the world is no longer about who has

more per capita speaking their native language but rather how can we put out heads together to encourage people to learn about each other, including languages.
You may be wondering "Who the hell is this bitch who's preaching to us about global communication?". Well, I have spent a large part of my life studying history & languages, observing people in their own cultures & abroad. By no means does this make me an EXPERT, but I have studied the facts & have seen more than just theory. I love where the world is headed in the realm of technology & I'm the first to respect the people who invent & create things to make our lives better (many of them German), but I don't believe in saying the French can make great wine, the Germans are mechanically inclined, & the Americans know how to sell products to mass markets. These types of stereotypes are what provoked certain leaders to go over the edge & become greedy & ignorant & losers: Napoleon & Hitler to name a couple.

I know this is kind of long, but things cannot always be said in one-liners. I'll stop for now, but I'm more than willing to discuss this further w/ anyone interested by the subject.

Bye.

One possibility is that the disk itself is different densities. If the disk in drive a is a 360K disk (Single Sided) and the disk in drive b is a 720K disk you can't copy it that way. Both must be formatted with the exact number of blocks or sectors (what ever they are called - not using my STe at the moment so I can't check) for a copy to work that way. If anything, open a window with a directory of drive a:. Then SELECT ALL (one of the options of the pull down menus), then drag them all to drive b: and see if that works. This is assuming you have TOS 2.06 which you can do the SELECT ALL option.

4334. Re: PageStream on a Falcon Work well for me

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <58epnc$co1@huron.eel.ufl.edu>
Source record: 132332

I have been using PageStream for years , I use v.2.2 and a Falcon with original hardware and 14 megs RAM. The program takes about 3 minutes to print any page even the super complex ones. If I need to print several copies of a page I will imput the number of pages in the print menu and PGS2 will only calculate the first page not each single one.

I do not have any printer aceletarion prg but if you are having trouble try just PGS2 without any other ACC or Auto PRG's

PGS2 should be able to print one page faster with a better driver but 3 minutes for a complex page is not too bad considering PGS2 great power.

The faster printing i have seen is Calamus 1.09 n' printer drivers.

4337. Quantum ProDrive LPS Problem

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: Thomas Wrather <wrather@mail.concentric.net>
Message-ID: <32AAEFB7.6BF1@mail.concentric.net>
Source record: 132335

I am trying to connect an old Quantum ProDrive LPS 105 hard drive
to my TT. After formatting and partitioning, everything works
fine. But when I power the system down and back up, I have
to reformat and repartition the drive before I can access it again.
After cycling the power, I did notice that linux complains about
not supporting non-512 byte sectors.

Any help would be appreciated.

4341. Disk drive won't stop after bootup!

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32aaf73c4a3a52@sn.no>
Source record: 132339

I've mentioned this problem before and someone mentioned a software patch to fix it, but I haven't had any luck in finding it (and I also forgot what it was called).... :-(

The problem is; after booting the machine (from a harddisk) my disk drive keeps spinning (even though the "in use" LED is off- I can hear the disk spinning inside).
The only way to remedy the situation is to access the drive- i.e. by reading the contents of it on the desktop or via the file-selector. After that it stops spinning.

I have TOS 2.06- is this a bug in this version of TOS, or does it have something to do with my harddisk/harddisk driver? My machine is an STe.

I downloaded this version of Connect, but haven't really looked over the features yet. So far it looks pretty much like the "old" version (v2.46).

One thing I noticed though is that my key for my existing 2.46 won't work with it! :-(I hope this doesn't mean that I have to re-register the program in order to get a newer version....?

By the way, what exactly are the changes in the '95' version (eh... it's 1996 now- soon '97!!!).

4343. More on Win 95 altering floppies

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: Aardvyrk@cris.com
Message-ID: <58evva$dqm@herald.concentric.net>
Source record: 132341

A month or more ago there was a thread on Windows 95 causing data and files on a TOS disk to be unreadable. I found a tidbit or two more.

From the Windows 95 Annoyances Web Page:
http://www.creativelement.com/win95ann/

You probably don't know it, but Windows95 will change the contents of any floppy inserted into a Windows95 System. This is to update the file system on the floppy to accept long filenames, but can have disasterous effects on your valuable data. Diskettes affected include some older versions of MS-DOS startup diskettes, many copy-protected programs, and software that inspects the validity of the diskette before installing. In particular, the place being changed is the OEM-ID of a disk, offset 3 in the boot-sector. To prevent Windows95 from altering your floppies, the solution is quite simple:

Write protect any floppies before putting them into a Windows95 machine.

- Submitted by Glen Copeland

[end quoted text]

I don't know if it does this while a Win 95 machine runs in MS-DOS mode.

It doesn't say specifically how TOS disks are affected, but I guess the best solution may be to format work disks on the 95 machine, then copy files back and forth, rather than using your TOS originals on the 95.

Just to be safe...

Hello,
I use a Mega STE with Cubase and would like to extend the number of addressable MIDI channels. I heard that an inexpensive extension connected to the serial or parallel port could be built easily and that Cubase was able to access it by means of the Export driver.
Does anybody know where (possibly on the Net) I could find directions/schematics for this extension ?
Thxs in advance for your input.

Philippe

The patch in question was probably 'FLOP_FIX' . I believe I found it
at FTP://sunsite.cnam.fr . It's supposed to rewrite the TOS floppy
routines in memory.

: If you had the money and time would you be better off doing which of the
: following: (Please list advantages/reasons for your decisions)

: A) Purchase one of the new clones...for awesome power.

Naw... too expensive for the power IMHO.

: B) Purchase a Falcon for DSP support...

What for? I can only speak for myself here, mind you, but a DSP is
one of the things I have least use for.

: C) Take a used STe, PAK 68030 it in a DeskTopper case, with a Panther
: video card, for max power/max compatibility with older software.

Well, such a system might be more compatible than a Hades, but I'm sure
it's way less compatible than, say, a TT. And not exactly cheap either,
don't you think?

: Really, makes you think, doesn't it? Let me know what you think!

It does, but IMHO you've forgotten the most interesting ideas:

D) Buy a used TT. They can be had quite cheaply by now, and they're
compatible with any application software and OS by definition. Heck,
they're Atari hardware, and well-known.

E) Buy a low-end to mid-range Mac, and MagiCMac plus NVDI-Mac. That's
awesome power as well, and every modern app should run, otherwise you
can reasonably demand of the author to fix it. And you'll never have
trouble with networking, video drivers, internet access and the likes,
at least less than with an Atari clone, because all those drivers and
hardware are needed for the Mac, not for some virtually unheard-of
Atari clone. You can expect to find a solution. And you can surf
the Web with Netscape. You won't be running many old ST games, but
there are always the new Mac games instead. :-)

Yours,
Erik.

If you have the money and time, definitly choose A) ! A clone.
These machines needs mainstream support, because they are by all means
those machines that has most potential! They have PCI-expansion, ISA and VME.
New cards are being developed as we are speaking, for instance a new
DSP-soundcard that connects to the VME-bus and a new PC-card that
connects to one of the PCI-slots.
Apart from that, it's relatively easy to make drivers for existing
PCI-cards so that they can be used on the Hades/DirecT.

However, if you need cheap harddisk-recording power, a Falcon is a worthwile
option to consider (option B)).

I would never I my life recommend buying an old ST to upgrade, it's far too
expensive considered the price/performance relation (far worse than a new Falcon
for general purposes)
and it's a hazzle to upgrade. And there's no way (at least not an easy one),
you can upgrade the ST to a 68040 CPU, the max. is 68030 with PAK.
The Falcon can be upgraded to a 68040 CPU with FastRAM for the same price it
costs to upgrade the ST with a PAK 030 + FRAK(for TT-RAM) !
Definitly not worthwile, if you ask me.

That was my opinion :-)

Keep Cool and Flying...

Hallvard:

I use atz,&c1&k3e1v1s0=0,, when accessing the net. Be sure to include
all three commas to provide time for the modem to properly initialize
before dialling. You might also want to check your DIP switches, mine
are set UP for 1,2,4,6 and 7; they are set DOWN for 3,5 and 8.

I don't have the manual handy now so check these out. Some of the
settings could be for the North American telephone system

> Hi There

I have been using MagiC4 and now 5 for almost a year I have found it
almost crash proof on the TT I uses to use Geneva all versions I also
have the latest from dan which is much better and faster. Geneva still
crashes at strange points which is the very annoying. MagiC is still
way faster. I have found a lot of programs which dont run under
Geneva. Geneva is also very fiddly to set up. Each program has its own
flags etc.

Most of the problems people have with MagiC is using old patch prg and
Acc and CPX's which are redundent with MagiC which has fixed the OS
problems. There are some rouge CPX's which should not be used also
using the latest version of Zcontrol or cops fixex the problem
Xcontrol etc.

I often run many programs together eg Truepaint gemview papyrus4 all
at the same time with no clash or crashes.

> following: (Please list advantages/reasons for your decisions)
>
> A) Purchase one of the new clones...for awesome power.

Pros: You can walk in any computer store and be able to get the stuff and
support for it. PC's are the most used which makes this easier. Plus,
not only you can get parts to make it more powerful but you even can get
ST emulators so you now have a TOS computer with 16 Megs, CD-ROM, 1.4K
floppy and a big honking hard drive.

Cons: Very expensive to not only start up but also maintain. The industry
expects you to upgrade to a bigger computer every 6 months. Plus between
DOS and Windoze 95, they're a pig to use. Also doesn't have a nice
"community" of helpful users like the Atari's do.

> B) Purchase a Falcon for DSP support...

Pros: Can use DSP software that other TOS platforms can't use and still
run ST programs even with a few patch programs. Great for hard drive
recording.

Cons: Sadly, no longer supported by Atari so like all TOS platforms you're
on your own. At least you have a world of users to help you though. :)

> C) Take a used STe, PAK 68030 it in a DeskTopper case, with a Panther
> video card, for max power/max compatibility with older software.

Pros: Best way to keep your ST and have it all buffed up. Graphics card
also catches up with everyone else in the 90's and is appricated with Web
browsers

Cons: See above. Also, you may need to upgrade to a HD floppy drive and a
faster modem port which all requires serious soldering work. Plus make
sure you do 'not' have to use any Intel applications at all.

Here's my contribution to the options...

E.) Buy a WebTV device for surfing the internet, a Playstation for games,
ad keep your ST for stuff like word processing and all that bull. :)

Now Tony, you know everytime I download something from your page I always comment on it. So I have yet to get Diamond Ice. Hopefully, I won't have any problems getting the blasted thing. Between the stone age 2400 modem and a not-so-reliable provider, I have no idea... :(

Great idea, take SGI rendered models and save snapshot pictures. Then convert down to 16-colored DEGAS files and use them as sprites in a STOS game. That's what I may do for my game idea...well actually use Cyber Studio :)

What Krisiki said is that he finds it very normal that bots ban people, i.e. _in the general case_. I've yet to see anyone on this thread, myself included, claim it was normal or right that TB banned you.

> > I don't see how a proper bot can be annoying to your so called
^^^^^^
> > real users.
>
> Would you dispute that I am a real user?, I think it is well
> documented that I was "annoyed" :)

Krisiki was talking about bots not brain-damaged by a ``bad words'' bind.

> > In fact the real users probably like good bots to help around. One
> > of the main reasons ppl put so much work into them I guess.
>
> "Freedom of speech"?, TB bans people for saying things it doesnt
> like, s0meone bot than backs up this stupid behaviour by then
> kicking whoever TB wrongly bans.

s0meone would have kicked _anyone_ banned by _any_ op, _however wrong or however right the ban_. this, in my opinion, is valid behaviour and I've yet to see any reasonable arguments against it presented, with the exception of Mark's "it robs me of the opportunity to use a witty kick message". Again the (remaining) problem is TB's ``bad words'' bind.

look at it this way: if TB was not on #atari, for some reason, on that night would anything have happened? (no (no other bots are as lame as to actually ban people on the strength of one word)).
if s0meone was not on #atari, for some reason, on that night would anything have happened (yes (TB, who is lame enough to actually ban on the strength of one word, is still there, you still get banned) the

difference being, instead of s0meone kicking you, TB kicks you).

So by removing s0meone out of the equation you get what? to be kicked by a different bot.

> I would rather NO bots than a bot that bans people for saying
> phrases or words it does not agree with, and a "sheep bot" that then
> acts on what TB bot has done?

I object to the phrase "sheep bot", I've explained my reasoning on the kicking of banned people above, and as for protecting TB, that was because TB was a "f"riend. s0meone had several "f"riends; TB being a "f"riend and protecting it was wrong (and I turned it off), but the protection of "f"riends concept is sound.

There are various programs that will do what you want. My favorite is SoundLab. It is on most big atari FTP archives (eg umich and its mirrors) The other is System Audio Manager that comes with the Falcon. (You may or may not be able to find it on the internet..)

Hi all..!
My friend has Neodesk4 and X-Boot boot manager..
He has a big problem.. he can't get any accs to load..! Mainly NeoControl Panel
We've read the docs but are still a little confused on the whole matter..
It says not use NeoLoad to early as it will not let the accs load and I think that's our problem.. He's not to hip on the Atari.. and I know a bit.. but I don't know what to do.. and he has no idea.. we've tried everythink in the manual that deals with accs but to no avail..
We even tried about 50 things that ain't in the manual and still can't get nowhere.. Anyone useing this setup.. that might know how to help out..?
I never used Neodesk before.. but what a hell of a prg..! Anyone wanna sell theirs cheap..?

He does not have an E-mail account so send help/ideas or whatever you can add to: dooley@infomatch.com and I'll will try to get him back on track!
Thanks
Johnny Dooley

4371. AT-init code for USR Sportster 14,4K?

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32aa208e8e3ff1@sn.no>
Source record: 132402

Does anyone know a suitable initialization code for the US Robotics Sportster 14400 baud faxmodem?

I'm using it with "Connect" right now (great program by the way!), and currencly the init code is "ATZ".
I sometimes get several CRC errors while transferring data via Zmodem- perhaps this has something to do with the init string I'm using (or not using).

I've also got an RSVE board installed and drvin.prg/mfp.prg is installed in the AUTO folder.
I've also noticed that using the MIDI sequencer "Notator SL" prior to any modem communication, the RS-232 port gets messed up somehow resulting in that I have to reconnect again after a computer reset since I won't connect properly.
Can an init code prevent this from happening?

Hear yea Hear yea, following Atari goods for sale....

SC1224's - 'refurbished' w/ original box & doc's...$65
- 'used' tested, good working order, good brightness,
color
& contrast...$50.

PCM124 - 12" 9-pin Atari PC Monitor-'refurbished' w/original
box,doc's...$65.

Calamus SL with extra plug-ins, original software & manuals, ask for
details...$200.

Aerochopper R/C Flight Simulator w/ Futaba R/C Transmitter contoller,
software in original box with owners manual...simulates flying r/c planes
and helicopters..$125.

Jaguar with CD Player includes all 'pack-in' software as sold by Atari.
Original box and doc's PLUS extra controller, Raiden Cartridge, BrainDead
13 CD, Highlander CD
All for $200.

Golden Image Cordless Trackball- new- $15

AlberTT v1.2 Video Card for MEGA STE or TT. Dover Research Corp 1991
w/9pin
to 15 pin cable + plus software...$125.
Heres more info on the AlberTT- 1024x768, 16 colors from palette of
4096.
Makes hi-res look like ST low res, just with a huge window.

Buyer pays shipping. Payment made by check/money order or COD.
Ship from New York, USA. /Danny/

A friend of mine and I were discussing the following the other day, and I just thought I'd post it here to see what kind of input we'd get... :)

If you had the money and time would you be better off doing which of the following: (Please list advantages/reasons for your decisions)

A) Purchase one of the new clones...for awesome power.

B) Purchase a Falcon for DSP support...

C) Take a used STe, PAK 68030 it in a DeskTopper case, with a Panther video card, for max power/max compatibility with older software.

Really, makes you think, doesn't it? Let me know what you think!

>The 030 in the Falcon is a custom one and apparently no info on this chip was
>ever leaked. Kind of makes it difficult to make a accelerator ehh?

The 030 cpu in the Atari Falcon is/was the standard 030 made by Motorola. Nothing
custom about it! You can still get the tech manual for the chip from Motorola Inc.

>About 200-400 Barracudas were made (according to sources) never released (why)
>One is required to move TOS to a new EPROM and in the process kind of rewrite
>TOS 4.XX to allow the audio programs to work. This is a copywrite violation
>and here in the US they would loose their shirts. In Europe its a different
>story as Atari is nill there now. And of course they offered some cash to buy
>TOS and not license. And of course C-Lab has some rights to te Falcon.
>
>But there is a rumor some Barracudas were quietly shipped to their European
>distributer. I think they are the only ones still making a memory car

Which sources? Let's hear some facts that can be verified.
The Baracudda is and always has been vapour ware! If 2-400 Barracudas were made,
who has them? You don't go and not release any product in over 2 years of r&d and
then also have the expense of 2-400 prototypes. Those things would have cost
Wiztronnics $500-$1000 a piece-do the math. And what have we heard from them in 2-3
years? Nothing. Nada. Zip.

In that same time, the 040 Afterburner Card, the FX 32Mhz 030 card,
the Hades, the Medusa, the DirectTT 060, have all been released.

4378. FS: Sequencing Software and Hardware

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: godpup@ix.netcom.com
Message-ID: <58dtmc$4q4@dfw-ixnews6.ix.netcom.com>
Source record: 132409

i have the following sequencing/midi software program(s) for sale:

Hybrid Arts SMPTEtrack Gold
-60 tracks
-MIDI filtering
-event edit
-graphical editing interface
-step recording
-punch in/out
-supports 16 channels per track
-tempo, pitch, velocity, etc. changes
-internal/external clock sync
-importing of standard MIDI files
-SysEx send/receive
-SMPTE code generation and tape lock
-Hybrid Arts SMPTE sync box (plugs into modem/serial port)
-and lots of other stuff that would take too long to type...
-original disks, and spiral bound instruction manual

Hybrid Arts SMPTEtrack II
-same as above, but with fewer features
-also original disks, and spiral bound instruction manual
(i'll just include this with the Gold version. No point in trying
to sell it separately.)

Hybrid Arts Score
-MIDI notation program
-Channel assign (1-16)
-can read standard MIDI format songs
-fair amount of editing/scoring tools
-original disk, no documentation (sorry.)

Band in a Box
-original disks with extra "templates"
-no documentation (sorry.)

Selling everything in one big "bundle." Asking $125 or best offer.
Please feel free to e-mail me if you have any questions. (or are
interested, of course...)

bye bye,

chrisTiaN

4379. PNG is Not GIF

Newsgroup: comp.sys.atari.st
Date: 1996-12-08 00:00:00 UTC
From: mille@tripnet.se
Message-ID: <58dtop$p65@minox.tripnet.se>
Source record: 132410

Hi all!

Is there other PNG-viewers/coverters than 1stGuide and
the PLUGI-IN module for GEM-View, as shareware/freeware.

I need a program to convert GIFs into PNG and have found
that the 68030-module to GEM-View is a little bit buggy.

A PNG file can store text associated with the image, such as an
image description. Is there converters somewhere supporting this?

The text should contain title, author, description, copyright,
creation time, software used to create, disclaimer, warning, source,
and comments.

Is there a way to implement that into PNG-pictures?

Best Regards
Mille

Sorry, but there is an option to install a switch with the PAK setup
that will allow you to switch back to a straight 68000 setup...thus
insuring complete compatibility...You are right that this could be
a pretty expensive setup depending on which options you choose.

>D) Buy a used TT. They can be had quite cheaply by now, and they're
> compatible with any application software and OS by definition. Heck,
> they're Atari hardware, and well-known.

AFAIK, the TT is very incompatible with lots of games and older apps.
If I'm not mistaken, the PTC1426 monitor won't even synch down to 15
at least, running it on my Falcon I can't use any game or demo that
requires that...

>E) Buy a low-end to mid-range Mac, and MagiCMac plus NVDI-Mac. That's
> awesome power as well, and every modern app should run, otherwise you

>

Hmmm, after reading the review of the BeOS in MAC User the other day it
seems as if your facts are a bit wrong... Be seems to be the alterative
choice for Apple since Copland is not coming together as was promised.
Also, Power Coputing (MAC clone manufacturer) will be putting the BeOS
onto it's computers starting next year...

Be apparently has some major work to do on the OS, but so far it seems to
be far surpassing all expectations in terms of showing how much power the
PowerPC chips actually have.

Rich is right about the compressed SLIP. Many ISPs default to a
compressed SLIP and therefore the new user can't seem to get things to
work because nothing (except DNS responses) will come back
intellegible to STiK, which expects an un-compressed header. Once I
spoke to my ISP, they turned off the default compression, and I
started receiving data (Oh boy!)

Do you have a floppy in the drive? if not that should fix the problem
with the drive running after boot up.

Full tech docs for the QuickCam are available to anyone. Just get the
mail-in form from their website, print it, sign it, and mail it, and
they'll send you it. Take a look at http://www.crynwr.com/qcpc/

However, interfacing the darn thing may be a problem. The PC version is
parallel, and we all know that won't work. (maybe on a Falcon...) The Mac
version is serial, I'd think it would plug right in, maybe not... (why
not on a MSTe/TT/Falc LAN port?)

Well, I tried the PageStream HP DeskJet driver, and the page creation
time was about the same, but the print time was much slower than the
Outburst Driver. I will try printing the same PS .doc on my 4meg STe
and see if there is any difference. I don't remember having this
problem on my STe, but I have noticed that PS loads up extremely slow
on my Falcon. Hmmm... We'll see what happens and post it here.

True, though 9 times out of 10 the memory seems to unfragment if you
close the window again. Haven't monitored what happens with a search,
though.

How do I switch it on? It didn't seem to do this unless I expressly
told it to remember a path with some obscure key combination when I

>you no longer need FOLDERxxx - which is only a kludge, really, I still run
>out of folder RAM about 3 times a week.

I can only support the improvement in speed that HDdriver provides. I had run with ICD software ever since I changed from a GE-Soft interface to an adSCSI+ about four years ago but I recently bought a Falcon and a copy of HDdriver v4 came with it.

To cut a long story short, I'd had the RS232 modified on my STe but never could get a reliable transfer at 38,400 baud through my USR V.everything Courier. 19,200 was rock steady and ran close to the maximum throughput all the time but if I switched to the higher port speed I ended up with a slower transfer overall because of the number of retries needed. With HDdriver I can use 38,400 quite reliably because the length of interruption for writing to disk is very much shorter than with the ICD software. Nothing else has changed.

Keith

4415. SuperSAM support & future development

Newsgroup: comp.sys.atari.st
Date: 1996-12-09 00:00:00 UTC
From: dan_hastings@uk.ibm.com
Message-ID: <19961209.131344.858@uk.ibm.com>
Source record: 132220

Please note, the contact address for the SuperSAM Falcon sound sample
editor is now dan_hastings@uk.ibm.com - any address @ex.ac.uk is
no longer in use.

Currently I am not developing SuperSAM, though I do still accept registrations
and issue .key files. The main reason for this is that most of my time is
spent working under netbsd unix rather than TOS. I expect to move platforms
to the PC in early 97 (FreeBSD, not Windoze *grin*).

This leaves me in somewhat of a dilemma on what to do with SuperSAM.
Currently the latest released version is 1.08. I have sent out beta versions
up to 1.14 which have many new features but which are a little unstable and
incomplete.

As I see it I can (1) forget it and wash my hands of it. (2) Put in some
effort and finish up the latest beta into the LAST release version. (3)
pass on the 68030 source code and support to someone else.

I'd like to do (2) and maybe (3), but I want to make sure it will be worth
the effort. Is anyone out there still interested in SuperSAM? If not I'll
just do (1).

Dan Hastings (Scatter) - dan_hastings@uk.ibm.com

My machine has a *very* weird problem in this respect. Any special graphics modes that use palette-switching or border removal etc. WOBBLES and has nasty horizontal streaks (approx. 16-pixel wide dashes in low resolution) flickering across from the right hand side of the screen. After a bit of warm-up this disappears. I've heard that apparently this is due to a bad video shifter - part C301712, and the good one which doesn't cause this (and CRACKLING in the DMA sound, which is less noticeable with the CPU at 16MHz...) is C300588. However, I know of at least one other MEGA STE with the same shifter as my machine but has *none* of my machine's video sync. or DMA audio problems :-(

As for actually *running* programs, no, they're fine.

Me too :-) I think the group were a victim of their own success. AC was
far more successful than they had anticipated and it took them all a bit
by surprise.

I've got issue 2 now BTW (arrived Saturday) and it's every bit as good
as issue 1 with none of the dodgy advert printing :-)

There's an excellent comparison article of MagiC and Geneva in the
current issue of AtariPhile (4) written by a very talented writer ;-).
Its bias is towards the Falcon because that's what I use but you should
find it useful. You can get it from:

Yep, thats correct.

>My guess is then to try to find the pathway that GEMDOS used in running

>PATH$+"\bobs\sprite.mbk\" so it reads "\the_game\bobs\sprite.mbk\"

yep. No need to use asm rout, or trap or anything - just use path$ which
STOS automatically sets for you. :)

>Then this way, you can put the game and data folders in any folder
>anywhere. If I have something missing here then please tell me, cause I'm
>still figuring STOS out :)

Well, yes, that way will work. However, as previously mentioned it will
all automatically be sorted out if you just put "bobs\sprite.mbk" ie leave
out the first slash. :)

>Think I'll try that. Of course, Hero and such games will need the hard
>drive off with only 1 meg and I may have to use Divert for some games that
>"must" be on A:. Could work :)

yep. :)

>> BTW. my Falcon fixed version of Hero has this bug removed. :)
>
>Meaning, any fixed STOS games don't have this problem? :)

Nope, meaning the version of the hero source which I modified to work on
the falcon (took out the PSG based sample routines which killed the Falc)
also had the offending \ removed from all paths. :)

i believe the reason no one wants to sale their Unitor 2 is:
Unitor 2 is a SMPTE box and software key. I paid for Unitor 1 $500.00 and had to return my old key. The software was also $500.00 .

SMPTE boxes for some computers still at $900.00 as I have seen in some mags.

I would never sale mine as SMPTE is great and without it I can not run my software either.

Your best solution would be to buy EMAGIC Logic with LOG 3 if you do not need SMPTE. I have both Unitor 1 with Notator and Logic for the Falcon . I just did a complete score for an orchestra and run the program non stoop for 12 hours without a single problem.

The score looks beautiful. I will be posting an IMG page of it soon.

>Neil Blue

If your Atari has a system boot disk it is a very early one (TOS1.0)
Most boot from the ROM
Use a DSDD disk, or a HD disk formatted to DD.
The Atari will be able to read it, and write to it, although there may be
problems with detecting a media change when changing floppy disks.
Press the ESC key to update.
good luck.bonne chance

Munch, munch, munch......

Hey, what's that noise?

It's me, eating my words.

My lovely fat subscriber's copy of ACM issue II arrived today.

It's great! And there's a LOT of it!!!

My compliments to everybody who did such a sterling job. By my reckoning, it is easily the best Atari mag ever, even if it is only bimonthly.

Sorry for my earlier email. It was just that several other people recently claimed to have seen the magazine issue 2 in late November, so I thought "hey, that's two weeks ago, where's mine?". I imagine those people were referring to drafts or show copies or something.

Anyway, as one newly converted, let me say this:

ATARI COMPUTING MAGAZINE _DOES_ EXIST. THEY ARE ACTING IN GOOD FAITH AND YOU _WILL_ GET YOUR COPIES. BUY ONE TODAY!!!

Keep up the good work!

Garfield Smith's AIG has 0.66 of Newsie, but the link to it wasn't updated
so it _looks_ like you will be downloading 0.64.

The new version of Newsie is also available at the US site at:

http://virtual-markets.net/vme/yac/

(follow the links to "download the latest" Atari Internet software).

Newsie 0.66 does not appear to be on Flinny's STiK stuff pages yet, but
will no doubt appear there shortly.

4434. IMG Scan ... RAW files??

Newsgroup: comp.sys.atari.st
Date: 1996-12-09 00:00:00 UTC
From: jnorton@nilenet.com
Message-ID: <58hggp$i23@thoth.nilenet.com>
Source record: 132239

I have an old Seymor-Radix IMG Scan. It comes with a fiber-optic cable that attaches to the print head of a dot matrix printer and software. It tells me that it will only save out scanned images (up to 1000 dpi) as either Neochrome, Degas or as RAW data files (extention .raw). I need the high resolution (1000 dpi), but so far I can't find anything to read and print the raw files (or convert them to another format for that matter).

Help!!!

: machine, but I hope it doesn't go the way of the Atari ST, Commodore Amiga,
: etc.

If that's the way you're thinking of the BeBox, you're missing the point.

The Be is not intended to take the WinTel market head-on and try to establish market dominance. That is what the platforms of the 80s, the Amiga and ST among them, were gunning for.

The Be is supposed to be a computer for people who want a neat computer. After launching the Be last year, the company's '96 sales goal was 10,000 machines, and I believe they've fallen short of that mark, though I might be mistaken. While they are making some inroads in the Mac market, particularly, as that is where the machine's development philosophy is based, the Be will, in effect, be destined to "go the way" of the ST and Amiga--it will be an alternative computing platform with a small market relative to the global computer market.

Now, I've just said nothing negative. I rather LIKE the Be and the idea behind it, and I think it could do quite well. But if you're craving 25% market share, it's not going to happen.

Hallo allemaal!

Aangezien ik binnen nu en 3 maanden voor een jaar naar Australie vertrek,
doe ik mijn Atari Falcon weg.

Dit zijn de specificaties:

* 4 MB RAM;
* 32 MHZ versneller;
* SCSI behuizing, quad speed cd-rom, 1.2 Quantum FB HD;
* 33k6 modem;
* en een hele hoop tijdschriften en software!!

Wie maakt mij los!!?? Ik ben al lang op zoek naar een potentiele koper,
reageer dus gewoon, want mijn vertrek is van groot belang en ik kan het
geld op dit moment dus goed gebruiken....

mail je reacties op bjorn@worldaccess.nl, dan kunnen we via deze weg
onderhandelen!

Met vriendelijke groet,

Bjorn van den Berg.

The Be OS will be bundled with all PowerComputing machines starting in January.
Power is moving at least 30,000 units or more per month. That may double due to
the strong sales of the PowerBase line. Power is reportedly will come out with
a multiprocessor unit for $1500 and will be shown at MacWorld/San Francisco
next month.

Other Mac clone firms will most likely license the Be OS to..

Hi Hallvard,

I use "AT&F1" as init string for a Sportster both on my PC and Atari,
with any comms program, and never had any problem. But I know that
older Sportsters dont use this command, hopefully, this is not your
case. (Then "AT&F&H1&C1&D2" should work, I guess)

Message-ID: <0a0_9612091223@conchbbs.com>
Source record: 132246

I may have missed a few responses on comp.sys.atari.st due to my 200 msg/day limit (now 400). Also, I'm going to be out of town for a while. Could someone keep track of any additions for me?

The current list is:

```
English "[3][Cannot load RSC file! ][Abort|Search]"
Deutsch "[3][RSC Datei nicht geladen! ][Abbrechen|Suchen]"
Nederlnd "[3][Geen RSC-file! ][Afbeken|Zoeken]"
Svenska "[3][Kan ej ladda RSC fil! ][Avbryt|Leta]"
Francais "[3][Je ne peux trouver |le fichier RSC!][Quitter|Chercher]"
```

I have several different French translations (all different), all using "trouver" which I believe means "find" rather than "load." rsrc_load() can fail for other reasons than not finding the RSC file. This might be confusing if one has used the "Search" button, which brings up the file selector, in which case you would KNOW whether the RSC file has been found or not.

Only one. Defender of the Crown fails the security test unless I
warm up the computer first.

4443. GEM / Tech info Request

Newsgroup: comp.sys.atari.st
Date: 1996-12-09 00:00:00 UTC
From: John.Kormylo@7861.conchbbs.com
Message-ID: <0a2_9612091223@conchbbs.com>
Source record: 132248

The GUI is handled by AES.

From bottom to top:

XBIOS handles hardware functions not included in the GEM specs.

BIOS handles device independent I/O. Actually, the important thing about BIOS is that all of the functions are entered through jump vectors, making it easy to add or replace drivers.

GEMDOS (Graphics Environment Manager) handles most of the system calls related to I/O, memory allocation, loading programs, etc.

MiNT (MiNT is Not TOS) is a GEMDOS replacement which, among other things, adds some additional commands. AFAIK, MiNT is the only OS with PD source code available.

AES (Application Environment Services) handles menus, dialogs, windows, form_alerts, events, and the file selector. It also has some rather interesting "shell" functions.

VDI (Virtual Device Interface) handles basic graphics. I suspect both AES and VDI call a common set of screen graphics functions (originally available as LINE A). Only the screen driver is available on ROM.

GDOS (Graphics Device Operating System) is a VDI extension which loads the drivers for all other graphics devices.

Their package works fine. I use it (including MG-ftp, which many others
seem to have problems with) almost exclusively whan I'm at home.

However, the symptoms you describe are consistent with a /COMPRESSED/ SLIP
connection. Get your ISP to turn off compression for your account and see
what happens (it's the "VJ flag" if your support people are a little fuzzy
about what to change).

IIRC, Swampy's coder doesn't accept command line input - which, for my needs, is an absolute requirement. Nothing fancy, really, just needs to be able to accept something like:

-Ie:\www131\antmail\atari\mail.box -Of:\ftp_ip

Which tells it to decode everything from my Antmail mailbox (filename might be wrong, but I could fix that if I were in front of /my/ 'puter <G>) to the incoming files folder on F:

That's "Van Jacobsen compression" - if it's ON, you have CSLIP, and if it's
OFF, you have plain SLIP (which is what you want).

(Posted and mailed; Followups set to comp.sys.atari.st.tech)

That certainly sounds like you have a CSLIP account, not a plain SLIP=20
connection. STiK will negotiate the IP address just fine, but after that,=
=20
incoming data (other than URL ACKs and so forth) is all compressed, and STi=
K=20
can't decompress it - so you get "no data" (even though your modem may be=20
blinking furiously).

New version of NoCrew's MPEG Audio Layer II realtime DSP player for Falcon
is out now!!

Latest version is 0.95 with lots of new features from the last one. (0.7)

* Dynamic buffer allocation
* Config file
* Drag & Drop protocol supported
* VA_START message supported
* Keyboard control
* Automatically find the next song
* New buttons:
* Skip to next
* Skip to previous
* Fast Forward
* Count direction

Read more about this product on http://noring.org/mp2 where you also can
get the latest version. It can also be found on ftp site:
ftp://ftp.nocrew.pp.se/pub/nocrew/tos

Download, unpack and blast away with your mp2 songs playing in the
background, taking no CPU time!

Mpeg songs can be found at http://www.iuma.com or ftp://ftp.iuma.com

!!!!!!!!!!!! NOTE !!!!!!!!!!!!
ONLY STEREO SONGS ARE SUPPORTED

Let's hear now what the public has to say about this.

Anders Eriksson, aka Evl of DHS: "BLOODY WELL DONE!!"

I'm not sure if he was talking about the player or his dinner though.

This is a dream coming true for every Falcon user, try it now!!
Send donations afterwards! :)

Tomas

This happened to me in version 1.4 when I had a viewer set up for "*.*". I took off this viewer (by shift-clicking on the entry) and the problems went away.

h> I downloaded this version of Connect, but haven't really looked over
h> the features yet. So far it looks pretty much like the "old" version
h> (v2.46).

I think it is very much the same. The docs. don't mention any other change
than the fact that it will now work with MagiC/PC and Windows 95.

h> One thing I noticed though is that my key for my existing 2.46 won't
h> work with it! :-(I hope this doesn't mean that I have to re-register
h> the program in order to get a newer version....?

The docs. say this as well! There is a new key-code system so you need to
contact your supplier (see "Reg" menu) who will give you a new code for free
if you are already registered. You need to quote the first 6 digits of your
existing key.

h> By the way, what exactly are the changes in the '95' version (eh...
h> it's 1996 now- soon '97!!!).

I honestly don't think there are any! The "95" refers to its ability to run
under Windows 95 in emulation mode.

> face it considered the word it objected to, a poorly written script.

TB and s0meone are eggdrops; they are programs written in C. as to
the quality of their programming, I wouldn't know, as I haven't taken
a serious look at the source code, have you?

(I agree the bad words bind is a poorly written script, I looked at
it, when I downloaded s0meone, but TB is not badly written, it's just
TMC chose to add a poorly written script which has no place in #atari
in any event to an otherwise good bot)

> No I am not an op begger but I feel it is important for people who
> stay for hours on end, who are trust worthy. to have ops. When I was
> K & B there were at least three people in this category.

just out of interest, Mark corrected that (at least one of the people
you refer to was added to s0meone's op list). of course Mark left and
took s0meone down with him (he was going home, it was in no way
motivated by this thread).

> Perhaps the only way round this is to sort out TB. I suggest: lose
> it,

Why? TB could become as passive as Aggrobot and s0meone if TMC was
ever around to remove the ``bad words'' bind. TB per se is not the
problem, it's the ''bad words'' bind and the lack of an owner to
change it.

> have a BOT which is maintained by a regular, someone moreso than
> TMC.

I do agree with the sentiments expressed, in that, it's strange for
TMC to run a bot and yet be absent for such lengthy periods of time.

> Maybe s0meone, as Flinny (hi Nick!) is pretty regular (I mean on
> #atari, not in the loo!).

excuse me? what has Flinny got to do with s0meone? he's a master,
certainly, but he's also a master on TB. Do you by any chance mean
n0one?

> Remove all stupid word bindings, the Bill Gates thing was silly

s/was/is/

it's still there, except now, TB (not just Aggrobot) does it. (and I don't like that one either, though at least that is just the bots concerned saying something rathen than banning people)

> but the suxk think is plain idiotic.

I agree, as does everyone who has contributed to this thread.

> A bot should never BAN anyone, IMO, unless a human has told it to or
> they are on a ban list set by a human.

Neither s0meone, nor Aggrobot will. (TB could also be like this, and probably should be)

Source record: 132274

I have an Atari 1040ST computer and SC1224 color monitor for sale.

The ST comes with all manuals and is in great shape.Monitor works just fine and has manual (not that you need one). System includes mouse. 135$ for all plus shipping from NJ. From experiance this comes to about 15$ to 18$

Shipping will be by UPS because if they loose or damage somthing at least they pay for it or can find it unlike SOME goverment agencys that shall remain nameless. I also have tons of software and books. If you are looking for something in particular ask and I'll throw in a few peices for you when you order.

Also have Okimate color printer w/ adapter module for an ST computer. Comes with original box, drivers and graphics software 20$ plus 4$ shipping

I wrote asking for help using an HP 540 printer with SpeedoGdos.
Thanks to the help of several people, I found the correct
driver in my SpeedoGdos distribution, and solved my problem.

Hmmm, don't know.
Now that you mention it, I seem to recall the same bug, when I used MagiC 4
on a friends Falcon that had a keyboard connected.

I haven't tried MagiC 5 on his machine, but I can find the next time I get to
him.

Well yes Eric, fanx, I was just wondering about the 48 (now 60+) who
had downloaded it, they all have internet acces, a quick email as
payment?, I have seen worse games for 20 ukp, sorry that was not
supposed to sound as big headed as it probably did :)

>any problems getting the blasted thing. Between the stone age 2400 modem

2400? thought jest surely ?

>> NEXT GAME: Donkey Kong Country Clone.

>Great idea, take SGI rendered models and save snapshot pictures. Then
>convert down to 16-colored DEGAS files and use them as sprites in a STOS

the idea was to pause the game, trace the main sprite then scan back
onto st, BUT having looked at all the ins and outs, and the fact that
it has to be ready by april, 15-16weeks? and crimbo is inbetween then
maybe a different game and that one after the shows, we really must
have a finished game to release at the show, and i have a doozy of an
idea :)

cheers mate, look forward to your comments to add to the other 2?,
:))))))

First of all, I can assure you all that Super Tetris works fine on a
Falcon, even if it's an accelerated one. I know, as I have played it on my
Falcon. the only thing I didn't like about it (not falcon-specific, as far
as I know) is that I couldn't have the Tetris game inside a folder on my
hard drive, that it had to be on the root of whatever drive I had put it.
Great game though!

: WELL SAID!

: I Still say you should have had it game tested, but people will still
: moan at you, I tell everyone I havent got a Falcon or a TT so cannot
: make games compatable, I then get flamed to hell and back for not
: using GEM with all the know alls telling me it would then work on
: every machine,
: Then when you do manage, you will get people moaning that they need
: backwards,
: I am still getting complaints about software I made years ago that
: wont work from HD, at a time I did not have a HD, still dont, was not
: on line, had no contacts and ther's nothing in the programming manual
: on the subject,
: I have been publicly told that this is a "lame" excuse,

: Unfortunatly you will HAVE to take it more than me, ten quid for a
: tetris clone and people have the right to moan, they pay so they get
: there say,
:
: BUT!.....I also get a fair amount of good feedback and this tends to
: outway the bad:)

: I am also sorry about the incompatability of my software, like the
: man said, give us a Falcon and we will knock your socks off :)

I hear what you're saying, but I'm tired of being lumped in with those fools who complain about software compatibility. I've not ever complained about software compatibility of software that won't run on my Falcon. The fact is, some stuff won't work. I'd be pretty chuffed if some dickhead started spouting off about the fact that, say, MPlayer doesn't run on a ST or STe, or that MagiC 5 needs more than 64 kb of RAM. Sometimes, some software just needs more power than others. Likewise, some software will not work or work well on Falcons/TTs/Direct0x0s/Hades/Medusas. Deal with that fact.

As for you, Tony, I am tired of your tirade. ignore the idiots out there and get on with your life. They're not worth your time, and frankly, you have more to give than just hooting and hollering in your attempt to drown out the voices of your detractors. I've never used your software, but I know that you're very capable. I reiterate, please just ignore them, and get on with the good things you do, okay?

Leslie

j> anyway?

While true, it's slower and again I run the risk of RAM getting fragmented
along with the display of the desktop window and becoming lost in the way
previously described.

Alternatively, I've established a lot of preset Quick Directories set up in
Start Me Up to speed things up a little.

j> The one thing I really miss is a feature of the Harlekin selector which
j> AFAICT even Selectric doesn't have, ie remembering the last few paths
j> you selected so you can shortcut back to them without having to do a

Selectric does do this - even remembering the position within the directory
which is an improvement over UIS (which does it in a limited fashion).

Harlekin has its own problems of course...

>> and supports worthwhile shareware. Of course, there is only so much one
>> guy can do so we can't expect him to respond rapidly to each and every
>> non-english release.
j> Yes, Joe Connor is brilliant!
j> Isn't this the same guy who translated ST-Guide?
j> I have read about him...

Moreso than just translating software, Joe provides direct support wherever he can, provides an avenue for registration fees to get back to the author in as economic way as possible (so that the banks don't get so much benefit of the money that's intended for the author) and provides a link for feedback to get back to the author - sometimes more than he gets in his own country!

But, Joe isn't alone in doing this. You may notice that the translator of ST-Guide v1.4e is actually Peter West (with Joe giving it the 'once-over' before release) as is Idealist (Peter is xlator@cix.compulink.co.uk). Also, Mick Lock has worked on PacShell and is working on others for Danny.

It might be worth offering services under the umbrella of an established shareware support service to keep things ticking over while it's busy on other fronts?

Just an idea...

Hi Jos, on 08 Dec 96 you wrote: ...respect, brethren

j>
j> ==
j> UK Supported Software by Joe Connor
j> --

That's a very old list, Jos - dating back to February 1995!

The most recent I've seen is as below:

```
========================================================================
InterActive supported software scheme 4th November 1996
------------------------------------------------------------------------
About the scheme
----------------
The supported Shareware scheme was started by Joe Connor in 1993 to encourage
authors to produce and support English language versions of their software
AND to encourage UK users to register 'foreign' software. Recently the scheme
was re-launched as InterActive. With currently over 1650 registrations the
scheme has established the proven benefits of local support, which include:

- Key to remove features reserved for registered users available
- Local telephone, post and Email support
- Free update service
- No hassle handling foreign currency
- Labelled Master disk and registration letter
- ST-Guide on-line hypertext help (some software)
- Other software (dependent on disk space)

Registration fees are set to cover the currency handling, stationary, media
and postage costs incurred in mailing out master disks and providing support
Although primarily a UK support scheme everyone is welcome to register via
InterActive as an alternative to registering directly with the author/s.

The currently supported software is:

Version Software Fee Status and description
------------------------------------------------------------------------
v1.73e Kandinsky 16 [S] Vector art using GDOS/Speedo/NVDI3
v2.50e Kandinsky 2 30 [S] Upgrade from v1.73 costs 16 Sterling

All prices in pounds Sterling! #=Registered users only
========================================================================

How to register from inside the UK
----------------------------------
1) Use the included ORDER_FM.TXT to select the required software
2) Make sure your name and address is included and *legible*!
3) Make cheques/POs payable to InterActive for the total amount
4) Send the completed order form and payment to InterActive
```

Additionally from outside the UK

- Add £1 to your order total to cover postage
- Make certain payment is *in Sterling* drawn on a *UK* bank address
The following methods are known to work:
-Bank draft/cheque
-Eurocheque
-International Post Office cheque payable *in Sterling*
-Cash! Sterling, Dollars and DMs are fine -but at your own risk!

Country specific information

Canada: Canadian Post Office money orders made out in *Sterling* are
perfect and inexpensive!
Australia: Please visit your Post Office and get a money order made out in
and NZ *Sterling*.
France: For some reason I'm getting a number of local cheques (i.e.
written in Sterling but drawn on a french bank address.
I can accept these but they cost £5 to negoiate so you must add
an extra £5 to your order total.
Europe: In general Post Office money orders or Eurocheques are the best
way to pay.
USA: What a nightmare! Can I suggest a day trip to a Canadian post
office? I've seen everything from Amex travellers cheques (add
£5 to order total), local cheques (no can do), cash (fine - but
at your own risk). An International money order (add £5 to
order total) made out in Sterling drawn on a UK banking address
is currently the best solution.

Update service

By post

To receive an update send a self addressed envelope including return postage
(or IRC) and an unlabelled double sided floppy disk. Please state clearly:

1) The software you'd like updated
2) The version you're currently using

How long will I have to wait?

Due to the number of people taking advantage of the service and my other
commitments as editor of Atari Computing I can't always reply as quickly as
I'd like to. Often I'm waiting for a new version or simply too busy earning a

living so please be patient!

If you have Internet access

Visit the InterActive websites which include news and gossip about the latest
products with links to other Atari related sites and (any day now) downloads
of all the latest versions.

URL: http://www.cix.co.uk/~inactive/
URL: http://www.toad.net/~interact/

If you have a modem but no ftp access

You can always obtain the latest English language releases from 42BBS:

SysOp: Colin Fisher-McAllum
Telephone: UK+(0)1256 895106
System: 24 hour/28.8K modem/Falcon/8N1

Other Bulletin boards and ftp sites are allowed to carry the on-line archives
but because minor updates to the English language version are sometimes made
without changing the version number hensa and 42BBS are the
places to go to ensure you have the very latest versions!

Regards

Joe Connor

A couple further followups on this thread ---

Guido Vollbeding <guivol@esc.de> writes:
> Charles Silver wrote:
>> Tom, I'm not sure if you have an Atari Computer, but if your willing to help
>> I'm sure the CAB developers would give you a good Benny Hill Salute' :)

> Unfortunately, CAB is developed in Pascal, and thus hardly supportable.

Hey, nothing wrong with Pascal ... I used it for years. C is more
widely portable, however, and a tad easier to use for bit-pushing.

I'd like to see CAB use the Pascal version of the IJG code, and am
willing to offer what help I can. (I don't own an Atari, though.
Jacques Nzali, author of the Pascal port, might be more help.)
Are the CAB folk reading this thread?

> You wondered that Tom Lane stepped in here: I'm sure he doesn't read
> this group, but there are Usenet search engines (Altavista and Dejanews)
> where you can find any articles with certain topics.

grepping the news spool is an honored Usenet tradition ... although when
you are looking for terms as common as "jpeg", you need a finely tuned
filter to avoid getting buried in crud ;-)

csilver@kendaco.telebyte.com (Charles Silver) wrote:
Yes, it would be nice if CAB could view these JPEG's and the reason I mentioned
Animation was to invite comments on the subject. Would you say that Animation
JPEG's are impossible? Six months from now will Animation JPEG's be on the
Web? The web site mentioned above *IMPLIED* movement, but I couldn't see, so...

Who knows what the future holds? "Motion JPEGs", which are just
series of separate JPEG-coded frames, are fairly common for video
editing. But they're not used on the Web at present, mainly because
there's no recognized file format standard for 'em; there are several
incompatible variants in the video world. If that confusion gets
resolved, you might see some motion JPEGs on the Web. (MPEG is
a better format for such things, though, if you can afford the
extra computing horsepower it needs.)

In any case, the "kittens" site is using plain, non-moving, grayscale
progressive JPEGs.

Maybe it isn't relevant anymore. But the ISO specification for DOS file
systems clearly stated that at certain places in the boot and root
sector of a DOS compatible partition these physical data have to be
present. HDDRUTIL supports DOS compatible partitioning in compliance to
ISO.

I would like to hear from anyone who has an ST with the
PAK68/3 Accelerator Board installed.

1) What is the maximum RAM such a set-up can have? (12MB max???)

2) Will linux work on this set-up?

3) Will software written for the Atari 520ST work on this set-up?
(I'm thinking anything running on an ST should also run on a Falcon???)

I'm thinking this would be a cheaper alternative to buying a
Falcon since I want to use it mainly for linux.

4493. Atari, Mac and compatibility issues.

Newsgroup: comp.sys.atari.st
Date: 1996-12-09 00:00:00 UTC
From: Peter Ross <pross@soho.ios.com>
Message-ID: <01bbe5bc$269482e0$616384a9@pross.ios.com>
Source record: 132305

If there were a Mac emulator for MiNT on 68030 and greater Atari computers, would the programs have to run in a Mac HFS file system or would it be possible for them to run under Minix? Does Spectre GCR/128 work properly with a PAK/030? What is the situation with Dave Small? Their were approximately 3 or 4 Mac emulators running on the Amiga, would it be possible for one of those companies to take over support for the Spectre Cartridges, making their own software to drive the emulation, perhaps evolving it to the point of full color and system 7.x compatibility. My Spectre128 helped me to learn about Macintosh computers and helped me to get jobs based on my knowledge of Microsoft Word, PageMaker, etc. Mac emulation on a Falcon opens up many new possibilities in terms of Desktop Video, and other multimedia creation. With the Falcon's ability to output to NTSC and PAL as well as S-Video, we already have an enviable ability compared to Macs and IBM's.
We have computers that are more closely related to Mac's but we decide to make networking software to connect to IBM's via serial with Blitz. There is not ONE program for networking with a Macintosh, perhaps a Mac version of MidiCom could be made allowing Atari's and Macs to be connected via the LAN port.

Amigas don't have Midi ports, DSP or audio input, yet they have Mac emulation. That is pitiful. Perhaps we should just create a version of UAE the Amiga emulator, for MiNT, then we could run Shapeshifter to finally get Mac emulation. A Mac can emulate an Atari with MagicMac but we can't emuate a Mac. The Magic people should make a special version of MagiC that has support for the Spectre cartridges and adds MacOS capabilities to those Atari computers.

Source record: 132307

```
:
: Just a note of appreciation to all the programmers of CAB/STiK and the
: beta testers of same. Alex Clauss, Dan Ackerman, Flinny, Swapdog, and the
: many others who have promoted CAB/STiK. Imagine the daunting task of
: writing a browser these days to compete with Netscape or IE who have
: hundreds of programmers coding away to compete and promote their product...
:
:
I would love to take part in this revelry, HOWEVER STiK or CAB or both
don't work ! I have everything in place, I considered all the
possibilities I know, my STiK logs in gets the IP and my ISP even says it
responds to packets, CAB reads pages OFFLINE just fne, but on line I put
in an address or try one of the given sites, not just any address, but
ones I know work right now on any other kind of computer, and it resolves
the host connects and dowloads "zero bytes (0) [reading 0 bytes]
[Recieved 0/1284 bytes] and stays there. Is it the CAB.OVL? I am not
helpless I configure MACS, and PC'S in '95 and NT even 3.11 (WINDOWS
versions) with Winsock, Netscape even the Godforsaken MS Explorer works.

I'll praise the authors when their package actually works! I hate coming
home to my Atari because I refuse to buy another computer because my
Atari has always been able to do whatever I need it to EXCEPT web browse.

What is it Relay compression? If you knew that would be a problem
couldn't you support it? I would gladly buy a Web Browser for my Atari
that worked,and was atleast trying to be up to date. My computer is
piracy free and microsoft free andwhen I can afford DEVPAC maybe I'll try
to write a Web browser and see that it is really a challenge I'm sure,
but I won't expect any "Praise" for a program that doesn't work albeit
hard to configure.

Atari Falcon 030/16MHZ 810MB IDE internal, 270MB Syquest EXT, 14MB Ram.

Please someone send me their TCP settings in their DEFAULT.CFG if they
actually have it working.

I'm currently trying to research a simple windowing system
And GEM seems to fit my requirements - is there any 'freely
available' source code (in C) for the GUI part of Gem out there ?

I have posted a message to Caldera and not as yet recieved a reply yet
(weekend post :)

I've also downloaded Vtos, Mint, GCCLIB (for atari/Mint - I think)
and a couple of AES replacements - But nothing that handles the GUI
(Or is it somewhere in Mint?) What does GEM call it's gui functions?
I'm getting confused with the diffs between gemdos xbios, and bios
also...

Pleae can someone techy help me please

(please email me rather than posting)

Please reply to either

psionics@geocities.com
or
oplec@wmin.ac.uk (Preferred)

Thankyou in advance

In this case you're unlucky. Version 2 of Cubase on the Ataris was before Falcon and TT came out, and therefore are not running on these machines. You will need to upgrade to version 3 or Cubase Score at least to run Cubase on the Falcon. This inherits also a 'new' hardware dongle. I think that upgrade is not so expensive. Contact Steinberg for details.

>(I know about the DSP, but all I need from the Falcon is sequencing. We
>use sgi workstations for 4-channel realtime audio processing; the Falcon
>looks a bit pale beside them).

With Cubase Audio on the Falcon, you can do 8 track harddisk recording with DSP effects or 16 track with slight compression and without dsp effects. In other terms, the Falcon surely looks pale in comparison to SGIs, except you count the costs too (which doesn't seem relevant to you <g>).

>... and proud tt030 owner, btw.

BTW, you could run Cubase score on the TT too with a big mono monitor. That's quite comfotable for scoring.

Hope I could help,

Chris

What machine are you running on? As far as I can tell MagiC's stability
problems seem to be confined to the Falcon.

Umm, that's really strange, the doc's for RATEHD say that it bypasses the
disk driver software.

I tried RATEHD with AHDI,CHBD & HDDriver & got no significant difference.
The results do vary from run to run for the same software.

Also, the latest demo version of HDDriver I tried (6.0) gives three bombs,
previous versions did work.

More than likely, HDDriver is the fastest + it does support IDE.

4504. New ViewSonic 15" and 17" multisyncs go to 15Hz Vertical

Newsgroup: comp.sys.atari.st
Date: 1996-12-10 00:00:00 UTC
From: Michael Grove <mgrove@ridgecrest.ca.us>
Message-ID: <32AE5599.75A3@ridgecrest.ca.us>
Source record: 132066

With all the screen blasters coming out
this is probably not much news, but
for those of us with standard video mode
Falcons, I though this might be interesting.
In the latest Mac Zone, there are a couple
of ViewSonic "Multimedia" monitors that have
just (since I read the catalog) become available.
The 15" will go from 15Hz to 120Hz up to 1024*768
with a .27 dot pitch. Comes with speakers for
$429.00.
The 17" will scan from 15Hz to 120Hz as well,
has a .28mm dot pitch and has a max res of
1024*768 at 86Hz. Comes with speakers for
$679.00.

Now there is a use for SWABS:)

The Jag would look pretty awsome
on a 17" with the RGB connection too.
Might be overkill for an ST, but what
the heck, all three resolutions with
one spaceage monitor. No more second
had NEC 3D's, old Amiga monitors and
no more 12" SC1224's or SM124's.

From the specs, these far surpass the Toshiba
Timms monitor, with just a slightly smaller
display area, but lower cost.

You can also go for the 29" monitor
for $2595.00 with over 25 type of
connectors at the rear for RGB/VGA/
PAL/NTSC. Wireless remote, 1280*1024
Max res. No dot pitch listed.

It helps if you try reading the DOCs ;-) You should use at least the
supplied fonts in order to see ansi graphics. If there should still be
problems remaining - make a binary protocol of your session and send
it to me uuencoded. I can then search for problems in your setup (not
for bugs in Connect ;-)

Well - this is the German Version. I cannot speak for other
suppliers. The upgrade might not be free there.

> I honestly don't think there are any! The "95" refers to its ability to run

Well there are a lot. However you need to read the German Help file in
order to see the changes list.

It seems that STiK does not work correctly with certain providers who use SLIP vs. CSLIP auto-detect software. I have a MiNT/MiNTNet setup that works equally well with SLIP or CSLIP with my provider, i.e. no problems whatsoever. If I try to use STiK instead (under GEM), I get the "0 bytes" problem.

Additionally, my provider occassionally sends down "pings" to test the line speed. MiNTNet handles these quite happily. STiK starts complaining about memory corruption and does not send up a response. Soon, my whole machine locks up.

So, there are still a number of bugs left with STiK, especially on the TCP/IP/SLIP end of things (hey - it's not easy writing a protocol stack). Not complaing myself, but saying the package works fine under all SLIP providers is incorrect.

>has caused several problems in the past (?)

When some HTML-Writers put Comments into the HTML-Source, and the don't
close the comment exactly, than CAB thinks the rest of the Page is all
comment!

for Example:

<!--------------!>

This Line above don't close the comment, becaus the "close-tag" of a
comment ist "-->"

This is the fact, why i can't read some HTML-Files.

```
:
: I'll praise the authors when their package actually works! I hate coming
: home to my Atari because I refuse to buy another computer because my
: Atari has always been able to do whatever I need it to EXCEPT web browse.
:
: What is it Relay compression? If you knew that would be a problem
: couldn't you support it? I would gladly buy a Web Browser for my Atari
: that worked,and was atleast trying to be up to date. My computer is
: piracy free and microsoft free andwhen I can afford DEVPAC maybe I'll try
: to write a Web browser and see that it is really a challenge I'm sure,
: but I won't expect any "Praise" for a program that doesn't work albeit
: hard to configure.
```

The program works! And it isn't hard to set up...something "odd" is going on in your situation. Most likely you don't have a plain slip connection. Have you tried getting the TAF/CHIMERA package to work? This is an alternative...and once it is installed and working you can use the PPP or CSlip in mint-net to connect with CAB and glue stick. Chimera is a pretty nice graphical browser as well...but it doesn't support quite as much of the "newer 3.0 and netscape" functions. TAF is not hard to set up either...it takes a little time...but you simply run the script and swap the disks. It does take a minix partition, but if you can't get a plain slip connection from your provider, this might be your best alternative until STik supports CSlip and PPP.

Of course, I can understand that you might not want to use up a partition to run mintnet and unix like tools...but if browsing is really this important to you...and STik doesn't work with your provider...it might be worth looking into mint-net.

```
: Atari Falcon 030/16MHZ 810MB IDE internal, 270MB Syquest EXT, 14MB Ram.
```

I've the same machine except I've a smaller IDE hard disk. CAB works great with my Falcon! It didn't take me long to get it working either! All I did was run the install program from the WWW131 package and keep trying different configs that came with it until one worked (of course I had to put in my dialer info). Since then, I've upgraded STik and CAB to the latest versions and it all works with the same old configs from long ago.

My best guess is that your provider might not have plain slip? Otherwise...if you keep trying the different configs in the WWW131 install program, one of them should be close enough to at least get a telnet connection!

Brian

Date: 1996-12-10 00:00:00 UTC
From: clisowsk@aegis.mcs.kent.edu
Message-ID: <58jlqm$37h@ns.mcs.kent.edu>
Source record: 132116

I am in search of information on obtaining Tos 2.06 for my newly
acquired STe. I must have one of the later versions, as it has
4 30pin SIMM slots, and the Tos 1.62 is in 2 banks of rom socketed.
I have access to eprom burner, but Im unsure of the eproms needed
to burn 2.06 if I should obtain the images to be dumped.
Any help would be appreciated.

I have heard this before, so you are saying that Atari has got a custom version
of the 030? Why?? Sounds realy weird... The MightySonic32 uses another 030 with
no problems and it have been around for ages. Sounds realy weird. Maybe the
Tramiels owns Wizztronic as well? It sounds like they have got alot in common.

:-))

> About 200-400 Barracudas were made (according to sources) never released (why)

> TOS and not license. And of course C-Lab has some rights to te Falcon.

So why on earth did they do something stupied like this? The Afterburner040
can even run without any patches to TOS at all. Okey, it's not very good
to do it an the risks are high that something gets wrong. And the reason
to use a new PROM is to get 32 bit access is also stupied as it's just a matter
of loading the TOS into Fast-RAM at start up and then run some patches
like Doug Little's excellent patches. He have almost solved all problems
there is with a 040 in a Falcon. It sounds to me that they wasn't competent
enough at Wizztronic to do it properly and they tried to hard. If they had
got a guy like Doug they would have sold alot of Barracudas at this point.

On the other hand, Wizztronics aint dead yet...

> But there is a rumor some Barracudas were quietly shipped to their European
> distributer. I think they are the only ones still making a memory card.

I have no idea about the memory card, but is there someone out there using a
Hawk or Barracuda? This would be a rare item to collect as well. :-)

> I don't work for them.

Sure? So why don't you have a proper name? :-)

Wha I need is a Super Nova graphics card! :-))

Message-ID: <58jvom$9hs@ankka.csc.fi>
Source record: 132123

Hi,

I just bought an used Falcon 030 (4/85MB) and I have an annoying problem.

I was intending to use my KCS Omega II sequencer with SoundDiver editor/librarian on my Falcon.

Well, Omega runs fine on normal TOS. But when I start it with MultiTOS on, I get immediately some kind of fatal memory violation error. When I disable memory protection in MultiTOS Omega loads and kind of works but when I switch to desktop and back the screen doesn't update right and the computer locks up after a while.

SoundDiver seems to run fine on MultiTOS.

I also tried to load SoundDiver temporarily from Omega's MPE menu and it does run but can't send/receive MIDI!

So, I was wondering if Omega II would be compatible with MagiC or Geneva? I suppose SoundDiver is since it runs even on MultiTOS.

I really wouldn't even need true multitasking, just ability to have both programs on memory at the same time so that I can easily switch from one to another. (Of course it would be a bonus if I could leave Omega playing and then edit sounds with SoundDiver listening to the Omega sequence simultaneously - this works for a while with the MultiTOS and memory protection off but it crashes quite soon.)

Any Ideas?

BTW, I recall having some utility called K-Switch years ago in which you could split the computers memory in parts and use different programs on each. Even something this simple would help.

Greetings, Jouni Alkio, Finland

P.S. If I can't get any solution for this, I might consider buying Logic or Cubase since those work with SoundDiver (according to the SoundDiver manual). Are they still available for the Falcon? I don't necessarily need the Audio version but such would be a bonus.

SUN only wants money if you earn money with selling Java Machines. If
they are clever they sell the OS and give a Java machine "for free" with
it.

There was a SETENV.CPX that Atari wrote during the MultiTOS alpha test phase. It reads the current environment strings from the AES by using shel_write() and saves its data out again to a (now unused) AES.CNF file.

The CPX won't run if this particular mode of shel_write() is unavailable. So while it will work under MultiTOS and Geneva (and maybe MagiC), it won't run without one of these.

Hi out there!
Has anybody tried to attach an Iomega ZIP Drive (100MB) to an ATARI Mega ST? If there is someone I'd be glad to hear from you.
Bye, Bernhard

4525. Mint with CAB

Newsgroup: comp.sys.atari.st
Date: 1996-12-10 00:00:00 UTC
From: faehnle.3@osu.edu
Message-ID: <58kgk1$nel@charm.magnus.acs.ohio-state.edu>
Source record: 132129

Is it possible to use stik and cab while having mint installed? I am using a simple setup of mint to provide geneva with pre-emptive multitasking. I do not have a minix partition or mintnet setup so obviously I can't use cab-for-mintnet. Whenever I try to access a site with CAB it says it is a binary file and gives me a file selector to save it. Is there anything I can do about this or will I have to setup mintnet and use cab-for-mintnet?

They shouldn't have to do it themselves, no. But Eddie Tao, among others,
has provided translation services (German --> English) for shareware and
freeware in the past; it's really not difficult to find a translator, if the
author has access to Usenet, Mausnet, NeST, AtariNet, or even <spit>
FidoNet. And just having the docs in English is enough in most cases
(although an English RSC file is always nice as well).

Harry, could I convince you to try out the LMS Program Launcher? Located at the ftp site listed in my .sig below, it looks like it might be a partial solution to memory fragmentation (if I understand how it happens). At the least, it's a quick and easy way to keep all of your favorite programs in a single "place" on the desktop - even a plain TOS desktop.

Look for ftp://ft.teleport.com/users/atari/lmsiiv52.zip

Correct, but in all fairness, you can buy an ST for the equivalent of a
couple of hours' labor, and an SGI will cost you a fortnight's wages. Time
is, in this case literally, money.

All STes have SIMM sockets. You'll have to purchase the TOS ROMs - I
believe System Solutions (http://www.ssolutions.com/) is the best bet in the
UK for Atari STuff - as the copyright is still valid. You probably need to
change a couple of jumpers as well. If your ROM sockets don't have empty
pins (e.g., if your current ROMS fill all of the holes in the sockets), you
may need to get larger sockets as well; TOS 2.06 has more pins than previous
versions.

Cuz needs an audio sampler cartridge - I'd recommend Replay or Replay 4 (I beleive the latter is the stereo version). Line out from the audio preamp goes to the input of the cartridge. The Replay carts also provide a line output.

Note that SoundLab provides a better user interface than the provided software - Soundlab is shareware and should be available from the usual Atari ftp sites.

I have used version 1.5 that way and it works fine. I just wish when
I clicked on an email address on the NET, that when Antmail loaded it
retains the email address I clicked so I could just type in the
message. I am told by the author of Cab, that is it possible to do
that way, but the author of Antmail would have to modify the program
alittle.

From: dlormand@aztec.asu.edu
Message-ID: <58kpp6$5oh@news.asu.edu>
Source record: 132145

I would like to design printed circuit boards for home projects.
My buddies who do the same and are not sickened at the idea of
kissing up to the evil Microsoft empire have plenty of cheap/free
software that does the whoe job:
o Libraries of parts/pad footprints
o Autoroute, rip-up-and-retry, etc.
o Print draft and to-scale on laser jets
o generate Gerber files and drill tape files for sending to
board houses.
Some even do schematic capture and simulation.

I don't need much. Just to print on a laser printer a to-scale
in either regular or mirror views.

Some of this free/cheap software comes from fly-by-night little
companies who are hoping to get in on the Microsoft crumbfest. I
can't see why they would object to licensing their source code
to an enterprising Atari developer to port it to GEM. So I am
wondering... does this sort of thing ever occur?

The only two obstacles I could see to this gambit (for far more than
PC design software) are
o The PC company refusing to deal with Atari developers
o Atari developers realizing they would not get enough out of
the Atari community to justify the expense and headaches of turning
licensing deals with the PC companies.

What's the story?

[Same goes with PAL/CPLD programming software!]

>I get immediately ATDT123456 ----> no action of the modem
> OK

Here must be the problem, a modem must not reply "OK" after a dial command... Is it the same when you use another program (terminal emulator)? I think you said no in a previous post... Is it the same if you type ATDxxxx under the dumb terminal in NOS? Type "tip pp0" (or sl0), then your AT commands, like AT&V, AT/ , ATI or ATDyourOwnNumber (if you dial your own number you get a BUSY line). F10 and reset the tip session to get out of there.

There is an RS232 signal, DTR (Data Terminal Ready), to say to the modem the computer is on and ready. The modem will hangup if this signal is set to zero during a communication, and will not dial, nor respond to an external call. The problem could be here... check your serial cable, and check the modem on another computer. Or perhaps you have an AT command to ignore the DTR signal, on mine it's AT&D.

IIRC there is something about this DTR signal in the HSMODEM settings, perhaps it's bad. The original settings like in the archive are the good ones... But if your old modem works the problem isn't here.

>BTW: The modem is connected to the serial 2 port of a TT030. The speed
>is set to 115200.

How is set the speed? What do you have in the MODEM.CPX and what in the attach command in STARTUP.NOS? The serial 2 port of a TT is driven by the SCC chip, like the modem 2?

Bye! Bruno.

h> while it's busy on other fronts?
h>
h> Just an idea...
h>

.... and a good one!

As you say, Joe's service extends beyond translating. He keeps the wheels greased and provides, with Cyberstrider and 42BBS, a common distribution point. This is absolutely essential.

If Joe would commission some of the volunteers who have stepped forward there would be an immediate increase in english versions with no duplication or other confusion.

CAB uses NVDI 3/4 or SpeedoGDOS 4/5 for printing.

Keep Cool and Flying...

Aha. That may explain my probelsm, at the least.

Since we're on the subject, anyone interested in TCP/IP in general might
want to look at the pages starting at http://www.nlanr.net/ - there's a lot
of research going on to try to improve Internet performance.

f/u set to comp.sys.atari.programmer since that's a programming issue.

Don't worry about fiiting ROM chips at the wrong places, your Atari can't be damaged by that. You can damage the romchips by inserting them reversed in the computer, or misaligned into the socket. With a six chip set you start with finding the boot pair. With the two boot chips inserted the right way in the computer the Atari will boot, ie will try to read the bootsector, detect the monitor type, will produce a annoying noise when no keyboard is attached etc. With the bootchips present the ST will run bootsector games and demos. It will crash when it starts GEM. This doesn't solve the problem with 2 and 6 chipset ROM versions, but the computer will not be damaged by it.

Yes, you have a point there. I realy don't know the use of this bit. You can't catch misaligned words on a 68030 as far as I know. What happens with STe when you turn the bit off?

The TT was the best pice of TOS compatible hardware Atari has ever released. Its ST memory organisation is 64 bits. The two funnel chips read 64 bit of video data at once. Those two funnel chips feed the data to the TT shifter (or the DP8516) in 16 bit blocks (so yes, there is a lot of room for confusion). The video adresses are generated by the MCU. You are right in pointing out the (video) address bus is indeed 24 bits. The funnel chips are also responsible for converting the 64bit ST RAM bus into the 32 bit bus used by the processor.

> immediately to mind...

I think he hasn't said why he needs more power. Yes, a dsp is very nice for demo's and sound stuff, but totally useless when your are using your Atari as a C development system, writing programs that should work on a TOS compatible computer. For speeding up your C compiler you need a fast harddisk, a fast processor and a lot of memory, so most of the include files can be cashed.

> requires that...

A TT can't sync down to 15kHz. It's using always VGA mode, even for displaying ST video modi. The lines are simply doubled. The vertical frequency is 60Hz. I think ST programs that work on a Falcon will also work on a TT.

>stands.

With the introduction it has received within the pages of MacUser you can
bet that their mission has changed. Why spend countless hours - hundreds,
thousands of hours creating a stable OS and have the intention to sell
10,000 machines a year? Where's the profit? Or maybe a better question
-what's the use?

>If Apple were to do something as drastic as, say, adopting the BeOS over

>soon still stands.

You're correct in your last sentence, but if people begin to see that BeOS
will enable them to do everything they can on System 7, but faster and
pre-emptively they will migrate. Be already has plans for laying down an
emulator path to keep every running smoothly - just like apple did when
the PowerPCs were first introduced.

Now as a software company sees the change, they might initally be against
having to cope with a new OS, but they would definitely see the increase
in power multiply in a large fashion.

>If the Be is somehow to become a successor to the MacOS, then fine, more
>power to it. But I still feel the future for non-WinTels is as
>alternative platforms, not as "me-too"'s, and my impression from Be was
>that most everyone there felt the same way.
>

If Apple is smart it will be the successor. Whether or not it will be a
'me-too' or viable alternative remains to be seen. From what I have read

about it - if Apple doesn't take the chance they will forever flounder in the 10% and less range of marketshare.

Sheesh, if atari had it's program right back in '85 we'd be arguing about their marketshare now...

Oh well, remember again that I am merely basing my opinions on what I have read. You probably have much more info that I could ever get, but it's still nice to discuss it :)

Hi Raymond,
My last words with Titan on the subject
went something like this.

The problem is sorted out, made progress,
however the company that the card was turned
over to for modification/improvement had a labor
dispute. This was a few months ago. It
sounded promising. Lets hope they pay them
what they want:)

Probably not to hard, but you would have
to be able to make an adapter for less
than the $70.00 that the X-Tra Ram cost.
But then again you don't have to buy the
simms. But with 1mb simms going for pennies,
it probably isn't cost effective.

I don't think that it is custom, but it does not have an MMU. That is
handled
by the Combel if I remember my manual. The Mighty Sonic has it's own
MMU.
But I fail to see where that would make a difference in how Wizztronics
would
impliment their own 030, surely they knew that. They would just have to
provide
memory management on their card just like the AB and the MS. As for
32bit TOS,
Magnus is right. Except that the video cannot be run from there. 32bit
"ST"
ram would have been a bitch to sortout the video problems. Especially
since
Atari didn't use Motorola procedures to impliment video in the chip set.
(Or so I was told).

> got a guy like Doug they would have sold alot of Barracudas at this point.

Boy, there is a statememt. Atari, GE Soft, Wizztronics, George Archer
and many
others could have used another Doug:). Think of Apex Starwars on the
Jag:).
But the change that Wizztronics was (is) trying to make is a valid. They
give
you a complete 32bit Falcon on a card, sans disk access. I think they
should
have looked at the Amiga market and took a long look of how they design
those accelerators. They generally include "fast ram" space and fast
SCSI 2
through a 32bit bus among other things. I'm sure that is what their
expansion
port is for, but if it dosen't work, or cost to much, what can you say?
With the
price drop of the Afterburner, no one will be able to compete with it at
this
point in time. Unless..... clones apear.

No, only Unitor 1 contained the key (it was available as Unitor-N and
Unitor-C for Notator and Creator respectively.) FOr this you had to return
your existing key in exchange.

Unitor 2 has a slot in which you plug in the key, it does not itself
contain any software key protection, and hence can be used with Logic,
Notator or Creator. (Unitor 1 cannot be used with Logic)

Bots like that do ruining a good channel. I used to be on this one
channel that police every word you say. It's suppose to warn you about
words like "butt", except when you type "button" it thinks you swore. And
the guy who used the bot ended up being a controling tight wad and a bunch
of us left for good.

I can see the use of bots for like simplifing op commands and nothing
more. In fact, some servers ban bots completely. I haven't been on the
chat channels since I have an unreliable provider, but somehow it doesn't
seem to worth going back :(

Christian Roth (croth@audiophile.com) wrote:

: In this case you're unlucky. Version 2 of Cubase on the Ataris was before
: Falcon and TT came out, and therefore are not running on these machines.

My TT was built in 1992, which is the date on the dongle. It appears you
are definitely right about the Falcon (score runs sweet as a nut on it).

: I think that upgrade is not so expensive. Contact Steinberg for details.

I wonder if there's any cash in the University coffers for this. They've
got a number of score dongles but one more would be handy.

: With Cubase Audio on the Falcon, you can do 8 track harddisk recording with DSP

I was talking about realtime audio processing. The sgi's will do in a few
seconds what the st's that were used here until a couple of years ago did
in a fortnight. I'm using accurate durations here, btw.

: except you count the costs too (which doesn't seem relevant to you <g>).

only around 5K for an Indy. It's the only machine I've ever seen run as
solidly as an atari (apart from big unix servers, which is what an sgi is,
of course).

: BTW, you could run Cubase score on the TT too with a big mono monitor. That's
: quite comfotable for scoring.

I've got a 21" b&w. Although I haven't seen Cubase on it, I did borrow
Logic for a while and you're right - an excellent music tool for less than
a grand (just).

: Hope I could help,

Thanks very much for taking the trouble.

Best wishes

Hehe... after having a look around on my harddisk I found out that I had
already downloaded it! It was included in a package called "sos-206" (TOS
fix patches and utilities for TOS 2.06). If anyone wants to download it,
you can go to my FTP site at:

ftp://ftp.sn.no/user/hallvart/atari/fixes/sos_206.zip (223 Kbytes)

(unfortunately it didn't help stop my disk drive- perhaps it fixes
something else; after all the docs didn't mention the problem I have).

>There's also a program called DRIVEOFF, should be on the same site.

I had a look around at cnam, but it wasn't in the "disk" directory... I'll
keep on looking elsewhere, but if someone knows exactly what it's called
and where it's to be found I'd appreciate it.

I've got a CPX module called "setenv.cpx" which is obviously for setting
the environmental variables within the system, but I can't seem to find any
docs for it, or how I should use it.

I know I've used it in the past, but a file of some sort is missing
since it reads "the environmental string data is not available" when I try
to open it.
Any ideas?

From: guitarra@afn.org
Message-ID: <58inu5$j62@huron.eel.ufl.edu>
Source record: 132199

I have used PageStream for many years. It was very stable on my Mega 4 and I was surpriced to find that
there is no way I can get it to crash on my Falcon. It takes about 3 minutes
to 4 on the most complex pages. This time is only to calculate each different
page not the copies. So if you print 100 copies of Page 1 , it only takes 3 minutes
to calculate page 1. The other pages will be printed as fast as as the printer can do it.

Page Stream is super solid on the Falcon.

PS the full color Postcript files are of great quality.

:
: Hmmm, after reading the review of the BeOS in MAC User the other day it
: seems as if your facts are a bit wrong... Be seems to be the alterative
: choice for Apple since Copland is not coming together as was promised.
: Also, Power Coputing (MAC clone manufacturer) will be putting the BeOS
: onto it's computers starting next year...

Well, I'm basing my impressions on my personal visit to Be last November about a business proposal where I had a number of discussions with their personnel, including Mr. Gassee himself. Now, granted, their mission may have changed since then--however, I think the basic statement I made still stands.

If Apple were to do something as drastic as, say, adopting the BeOS over an in-house solution, it would cause a fracturing of the Mac market--not everyone would jump off the System 7 boat. In any major architectural change, you're not going to capture 100% of the developers and users immediately. So my point about not expecting a 25% market share any time soon still stands.

If the Be is somehow to become a successor to the MacOS, then fine, more power to it. But I still feel the future for non-WinTels is as alternative platforms, not as "me-too"'s, and my impression from Be was that most everyone there felt the same way.

I'll also "throw in" Calamus with a bunch of fonts and other related disks. However, I don't have any documentation for this program. All disks are the originals, and in perfect working order. e-mail me for more detail.

All sequencing and midi software, plus Calamus and its related modules, shipping and handling - $100.00 I think that's some sort of super-bargain or something.

I just want to make techno,

Three bombs when RATEHD is started? BTW, the latest demo is the demo version of HDDRIVER 6.1, available at the usual place.

In order to get reliable information about driver speed I recommand SCSITOOL. SCSITOOL uses the currently installed driver for speed measurement. Note that in order to compare drivers you'll always have to use the same partition for your tests. This is because SCSITOOL uses BIOS calls to read _logcial_ sectors (and thus is driver independent). Partitions differing in sector size will also appear to differ in speed.

Well,if this is like 'SETENV.PRG', it expects a file with the
environmental variables to be present in a directory (maybe the root).

Maybe you can set this up using the CPX , is there an option to save ?

I prefer to use 'SETENV.PRG', as it runs from the Auto folder.

This was originally part of the Heat'n Serve C package, but it works for
other programs that need environmental variables set.

Yes that would be very interresting indeed. Some have said that the 040 version
was ready, but never released. Probably with a proper 32-bit bus as well. It
must have been realy fast if it ever made it as the Afterburner040 is very
fast, even with a 16 bit bus to the rest of the computer.

I thought it had a DSP?

: Hallvard

I kind of appreciate the discussion myself...
Granted, it is not "Atari Specific", but it is of interest to this
Atari User. After all, the way computers are heading...it will soon
make no difference what hard-ware one chooses...they'll be able to
run pretty much all software...I.E. MagiC Mac proports to make
the Mac a viable TOS compatible machine.

Anyway Hallvard, I see your point...but this is a very interesting
discussion about "Alternative" computing. Many may consider Atari
an Alternative platform, and find such discussions very interesting...
esp when two platforms are built around the same processor family and
have many other things in common. Finally, in this thread, the discussion
does point out more than once the similarties of Apple's position in
market share now to Atari's position less than a decade ago. There's a
lot of differences as well, but I can see where this thread might be
of interest to Atari owners...developers...

In my case...it was particulary interesting because I've often thought of
creating a publication around "Alternative Computing". It is getting
difficult to find enough subscribers to justify a magazine built solely
around Atari, or Amiga, and others...but one could put together a really
nice Wish Book sized glossy magazine if the basis were expanded to
"Alternative Computing" that would be of interest to all things
"Non Intel".

Brian

Using CAB 1.5 and CAB.OVL 1.18, I've had no trouble printing text from CAB, but it just skips
over any pictures on the web page in question. Oh, and I use G+Plus rather than GDOS, SpeedoGDOS or NVDI...so I guess CAB can use G+Plus as well as the others???

**************************************************************************
FLOPPYSHOP PRESS RELEASE - Aberdeen, Scotland, 11th December 1996
**************************************************************************

************************************
* FESTIVE PROMOTION ON POSITIVE IMAGE *
************************************

As a goodwill gesture to their friends in the Atari community, Floppyshop
have announced a 25% price reduction on Positive Image, the leading image
processing and retouching package for Atari computers. Already competitively
priced at 69 UK pounds + P&P, the special promotional price of 49 UK pounds
+ P&P represents even greater value for money, bringing the product firmly
into the hobbyist price range.

Positive Image runs on any 1 Mb system (ST, STE, TT, Falcon, Medusa, Hades
etc) in ANY resolution (without loss of colour information), although a
minimum of 16 colours is recommended for obvious reasons. Virtual memory is
supported on all machines with a hard drive (yes, even on an ST) and
unrivalled results (nothing can match the quality!) can be output to all
printers (colour supported on Deskjets and Epson Stylus). You can undither
hand scans, converting them into black and white photographs, colourise
greyscale images, create elaborate montages, pasting images at variable
transparency levels, cut images from detailed backgrounds using the variable
settings on the trace tool and work with large images of 10 Mb or above in
size (subject to available RAM). And that's only for starters.....

Positive Image comes on two disks with dedicated versions for 68000, 68030
and 68040 (or 68030+FPU) machines and includes a 136 page fully
illustrated spiral bound manual.

For full press releases and sample images, check out their WWW site
(http://www.netkonect.net/tachyon/flopshop/)

This special offer is strictly limited and expires at midnight on 31st
December 1996, at which time Positive Image reverts to its usual price. If
you wish to take advantage of this offer you can order directly from
Floppyshop or via any of our distributors worldwide.

ORDERING DIRECT
```

If ordering from Floppyshop payment can made by credit card (Visa, Access, Mastercard or Eurocard accepted), Cheque or Postal Order. Overseas customers not paying by credit card must ensure that payment is in UK funds using one of the following methods:- Cheque drawn on a UK Bank, International Money Order, Post Giro, Canadian Postal Order or American

Express Money Order. The cost is 49 UK pounds + P&P (UK 2 pounds, Europe 5 pounds, Rest of World 10 pounds).

OVERSEAS DISTRIBUTION
****
Overseas Distributors are listed below. If you have any difficulty obtaining the product from any distributor, please contact Floppyshop directly.

SWEDEN, NORWAY, FINLAND, ESTONIA, LATVIA and LITHUANIA - Falcon Pro Center, Vaederlekstorget 12, S-418 32 Gothenburg, Sweden.

NETHERLANDS - Atari ST Computerclub Nederland (ACN), Postbus 5011, 2000 CA Haarlem, The Netherlands.

DENMARK - Indigo 2, Montanagade 29E, DK-8000 Aarhus C, Denmark.

NORTH AMERICA - Computer Direct, 10338-59 Avenue, Edmonton, Alberta, Canada. T6H 1E6

For further information or to place your order, contact Steve Delaney at Floppyshop.

Hi someone wanted to know about this so I will post it again.
==========

MULTIMEDIA AND THE FALCON 030

How to add audio samples to Apex Media or any other graphic
programs

My fist computer was a 1040ST with one megabyte of RAM. I used Notator from C-Lab for professional scoring of guitar methods and composing. Since 1989 I have owned a collection of Atari computers including: a 520,1040ST, Mega 2 and a Mega 4 which all still work.

I had been aware in the increase of video and graphics quality of home computers 9 specially IBM) and began to think of their possible application in creating multimedia presentations. My ST. MIDI setup was powerful and possible the best (including real time music notation) but high quality graphics was out of the question.

So, when I heard of Atari planning to produce the new Falcon 030 I got excited. According to the brochure, this baby was going to be a true multimedia machine. With great high color graphics and stereo 50 kHz 16 bits Audio the possibilities were endless.

When I got my money saved up and finally got hold of a Falcon 030 with 4 megabytes of RAM and a 80 megabytes hard disk I was to say the least very happy (I got me the Falcon as my birthday present) I had the bird in my hands and was ready to experiment. I wanted to know really how great was this machine from Atari.

being a musician I fist wanted to test the Falcon's sound quality. I recorded some of my classical guitar solos, as well as jazz band recordings I had on DAT. I also recorded very quiet samples and just silence to test for noise and distortion.

I was greatly impressed with the Falcon's audio as it sounded to me as good as the quality of my two Sony 75ES DAT's. I however noticed some distortion that I latter corrected by adding the audio attenuators resistors for the inputs that Atari recommends in page 10 of the SAM manual. (Radio Shack Part # 274-300a 40db attenuators)

I also added L and R IN and OUT phone jacks in order to use professional cables and connectors. Later on , I expanded my system by adding Logic Audio, a Quantum 540 Megabytes SCSI HD, an NEC 74-1 Multispin CD ROM drive and 14 megabytes of RAM.

I had no daub that on the Audio side I had a powerful system costing much less than a MAC or IBM setup.

THE VIDEO SIDE

I began my test of the Falcon's video and animation capabilities by searching for FLC/FLI animations on the Internet I found several animations and demos that started to

reveal to me the great power of the this machine. Some of these demos and animations are:

-Are you

-Eko-Eko

-Popeye

mouse.prg

I also got a CD ROM containing true color and 256 colors animations. The best of these CD's is the Animation Festival from Wizardware Multimedia Ltd.

Mouse.prg was a very small animation but very impressive. This demo showed me that the Falcon could handle simultaneous video and audio very well. It was when I got to work with Apex Media (a Christmas present from my girl friend) that I got really excited about doing animation, video capture and editing on my Falcon.

So now I had great audio recording software and great graphics software, the question was how to put the two elements (audio and video) together to do some Multimedia work.

I had about two hours of original music recorded and also many hours of HI8 video. I wanted to use Apex Media to do some video editing including transitions and fades , but the problem was that either Apex media or the Expose digitizer did not support Audio!

I wrote several letters asking if it was possible to put together FLI/FLC sequencing audio. I wrote to computer programers and I was told that the falcon could not handle the high speed data transfer necessary for Audio/Animation. I refused to believe this because I had seen these demos and mouse.prg proved that it was possible.
I experimented with WAV and FLI players and finally after all the work I got results.

SAM COMES TO THE RESCUE

Your Falcon comes with a program called SAM. SAM (System Audio Manager) is a combination of a very simple but powerful PRG. ACC combination that can be used to play small or large samples on your Falcon.

The engineers who designed the Falcon's Audio System are in my opinion true geniuses. After you do some experimentation with SAM you will realize that when it comes to sound (and video) the Falcon does incredible, reliable and fast true multitasking.

The system works so well that it behabes as if the AUDIO/VIDEO functions are independent entities (and maybe they are. As an example you could play a long digital audio track while writing or reading to the hard disk, Loading a program, working within a program. You can even change resolutions and the Audio will keep playing without a glitch!

So, here I am going to show you how to use SAM to play your Digital audio tracks from within Apex Media or any other program. You will be able to play your animated sequences with music, and even change sound tracks with the touch of a key. You will be able to listen to the audio while you draw, download a file from the Internet, or load a

large graphic file into Apex Media! IT IS BEAUTIFUL, IT WORKS, YOUR FALCON IS GREAT.

Lets begging by reminding you that SAM loads all the the sample files you are using into RAM when you boot the computer. For this reason and for simplicity it is better to start by just using two or three samples. Later on, you might like to load several
samples, and this depends on how much RAM you have in your computer. You can have as many samples as you like in your SOUNDS folder, but only those you have actually assigned to events or keys will be loaded into memory. I have 14 megabytes of RAM on my Falcon so I have configured SAM to have a 5 or 6 megabytes buffer to load 3 minutes long mono audio tracks.

It is a good idea also to use samples that use the same sample rate. For example, 20Khz 8 bit samples are very good for the Audio/ Video application we are talking about. You will need to configure SAM , and this

After you have recorded your samples in AVR or WAV form. A sample frequency of 20Khz 8 bits is fine for this application. Make sure that they are placed; in the sounds folder you intend to use. You can use the original sounds folder in your HD. partition C or create a new one anywhere you prefer. If you are not using the sounds folder in partition C you need to reconfigure SAM. This is done by opening the SAMFIG.ACC and clicking in EXTRAS and then on CONFIGURE. Size to feat, will size your buffer automatically . (IMG 3)

You can play your samples from within any application by assigning them to any key of your computer keyboard . Once you load the program you want to work with, the sample is played by pressing any key you assigned a sample to. For example, the down arrow key is used in Apex Media to start the animations so I assign a sound track to this key to start the sample in synch with the animation.

To assign a digital sound sample to a key follow these steps:

1-Enhable the SAM.PRG that should be in your AUTO Folder and also

the SAMFIG.ACC on the root directory and reboot your computer.

2-Call the SAM Setup ACC and click on Extras. (IMG 1)

3-Select "Define Keys"

4-Select "New key Set" and name the key set. (IMG 2)

5-Press the key you want to assign the sample to (for this example you could use

the number 1 key on the numeric pad on the right of the keyboard)

and click the mouse button.

6-Now you will see the name of your key set on the "Current Key

Sets" window

7-Click OK

NOTE: You can create any number of sets containing one or more

keys, but to stay simple just define a set with one key for now.

8-Scroll the System Events Window to find the set you just

created and select it. (IMG 1)

9- Assign the Sample by selecting it from the "Sound Assignment

window, click OK

SAM may need to reconfigure the memory buffer and you may need to

reboot your computer for the samples to be activated. Use the

built in Recording feature to record your own new samples.

Please read the instructions on the Atari System Audio Manager

manual for more details on using SAM.

Once you EXIT the SAM Setup Acc. you will be able to play the

samples by pressing the keys you assigned the samples to. You can

play this samples from within any program. If northing happens make sure that

the sound buffer is sized correctly and make sure that you rebooted your

computer.

Load Apex Media and load a FLI/FLH animation and press your

sample Key. Surprise! You have got Sound and Video. Your Falcon

is a great machine!

Also you can play another sample on the fly. Try it, works very

smoothly. I have played samples 1 minute long and even changed

resolutions and the sample kept going without a glitch.

If you own the Neodesk Desktop you can do some really neat things using macros.

For example you can Install a FLIC player program as an application and then

define a macro by clicking on the Menu Item Begin Macro . Then double

click a FIIC file to play it, after the animation is over click on END Macro and

assign the Macro to a key. If you
assigned a sample to this key, next time

you play the macro using that key both
the animation and sample will play at

once.

I hope you find this tips fun and helpful.

Raymond Lohengrin Tue September 5 1995

NOTE: NOW AVAILABLE " FRIENDS" RECORDED ON THE FALCON 030
This is a new album completely recorded on the Atari Falcon 030. It contains over 21 pieces for Spanish and jazz guitar and Spanish guitar and flute. The performers on this recording are Jorge Chicoy (electric guitar), Chris Walker (flute) and Raymond Lohengrin (Spanish guitar) All the music in this album have been recorded for the first time. The music has a "New Age" character with Spanish and jazz influence. To order please send $9.95 for 60 minutes cassette tape or $19.95 for both an audio tape and a digital copy on DAT.

Raymond Lohengrin was born in Manhattan and moved to Cuba at an early age.
He studied the guitar at the music conservatory in Habana. He also studied the guitar with Eli Kassner professor at the University of Toronto, Canada. Raymond Lohengrin has been teaching the guitar for over 17 years. His works for flute and guitar are published by L. PIPER Publications. He lives in Gainesville, Florida.

Jorge Chicoy is the leading Cuban jazz guitarist and has performed in Europe with Joe Pass and Michael Legrand. Chris Walker holds a Masters Degree from the University of Miami. He played with the American Ballet Orchestra for many years.

To order please send check or money order to:

Not very likely.

Falcon-RAM cards are 32-bit wide, it will propably be too much trouble
to make a 32-bit to 16-bit multiplexed interface for just a RAM-card.

Keep Cool and Flying...

The address is info@toad.net, and the URL is http://www.toad.net though
they moved there Atari stuff to a different link called Atari Central.

It's been a long while before I got a new catalog from them. I know they
are moving towards PC's and the Internet with ST stuff from remaining
stock, but would they still have a new catalog out yet? Just wondering...

Sounds as if someone did a low-level format with non-standard sector sizes
(all the formatters I have encountered for the ST/TT are high-level
formatters). Can you find someone with a PC and an Adaptec SCSI controller?
Get him to low-level format the drive (using the Adaptec BISO routines,
accessed with CTL-A during bootup), then just partition it on the TT instead
of reformatting.

I tend to agree that it's somewhat relevant, but I think it belongs in
advocacy, rather than the mainstream newsgroup. I have looked at the
BeBox, and it's a fascinating and bold approach to designing a new platform
from the ground up. Let's hope it succeeds in the marketplace.

>Is there an alternative (WITH SOFTWARE!!)?

Norbert's ACSI/SCSI Ethernet card (with software) is supposed to be ready by
now. Visit his page at http://members.aol.com/NorWiecz/index_e.html and see
what he has to say. Midn you, this will cost about US$150 - but it's well
worth it; I plan to get a couple of them as soon as possible, to switch from
MIDIcom on my home network.

It's not a good idea at all to tell STiK to check for CD, if your port
(Modem 2 on a TT) hasn't got one. Set CDVALID to FALSE !

Also your receive window RCV_WND is unusually large. This doesn't cause
any harm necessarily, but it might be worth to decrease it.

The NAMESERVER0 entry is not read by any program. You can safely remove
that line.

> Rich Tietjins also said to " Also verify with the support folx at
> your ISP that the VJ flag is turned OFF for your account."
>
> But Mike and Pat at Fog.Net have never heard of a VJ Flag...

The VJ Flag is the flag telling the net software to use Van Jacobson
header compression. This will make CSLIP out of SLIP. Right now STiK
doesn't support CSLIP properly.

Normally ISP people are too dumb to know what this is. You needa have
them search their configuration for anything that looks like compression
or CSLIP (which means the same), and turn it off.

Cheers Peter

Rich Tietjens (atari@teleport.com.REMOVE.TO.REPLY) wrote:
:
: They shouldn't have to do it themselves, no. But Eddie Tao, among others,
: has provided translation services (German --> English) for shareware and
: freeware in the past; it's really not difficult to find a translator, if the
: author has access to Usenet, Mausnet, NeST, AtariNet, or even <spit>
: FidoNet. And just having the docs in English is enough in most cases
: (although an English RSC file is always nice as well).

I wish I had the time to do this, but the solution seems fairly obvious. If someone with time and initiative were to organize the tranlating volunteers, and then advertise this translation service in the German newsgroups, Mausnet, etc... we might shortly have an influx of excellent software in our language.

Joe Connor is already doing this, but obviously there is much too much out there for one person to cover. Plus, Joe's services are more comprehensive than what we are talking about right now, which is merely translation of programs RSC files and documentation (as opposed to registration and help support).

In addition to the German software, there is a ton of stuff available in French and several other languages.

But what is needed is a fixed contact, well publicized, that programmers learn to turn to _and trust_ to do the translating for them. All the programmers ahve to do is upload a copy of the files (liek they would to an ftp source), they would be given the opportunity to proof-read/verify the translation. Then, with the programers permision, the translated version would be made available via ftp or whatever distribution channel is appropriate. If the program is shareware, and requried significant effort to translate, perhaps some cut of the registration fees could be arranged so the translator benefits, but this would be outside the pervue of the translation service and should be arranged seperately between the programmer and the translator and perhaps a shareware distributor like Joe Connor or Dannesh Bhabutta.

Anybody who has translated a program for his or her own use could contact this same translation service to see if there is any interest in this translated version. If this is the first time a particular program has been translated, the translation service would contact the programmer and arrange permission to distribute the new translated version. This last bit is the most important to my mind. I know most of the good stuff is already being used by English speakers. If only we could pool these resources!

Yes, it's called Nos and is the atari version of the PC Ka9q. It comes with a Gem front end (offline reader) called Oasis. Look for Oasis135E. If he has a pop account he will have to get the pop version of nos. Just overwrite the supplied nos executable with the pop version - their interfaces are identical and this will be totally transparent to Oasis. He will have to enter some details manually with a text editor though.

UK? It looks like the guy has a US address to me... correct me if I'm
wrong.
Anyway, if you live in the US you could try Toad:

http://www.toad.net/

There are probably other dealers who have them as well- have a look at my
web page/Atari St section (URL below)...

The SIMMs don't have anything to do with the ROM chips, and like Rich says,
all STEs have them.
He's also correct in stating that you need to re-configure a couple of
jumpers for the new (larger capacity) EPROM chips. Email me for the
specific details as I've installed TOS 2.06 on my STe myself.

There's also a jumper on the motherboard you can connect to get access to
a new High Density (1.44Mb) format option (not very useful unless you have
a high density drive fit in your machine with the appropriate electronics
though)...

Well yes- it's inside the drive since a blank disk has had it's bootsector
modified by "bootsie" which makes the harddisk start booting up faster with
TOS 2.06... I'll see what happens if I start booting without the disk.
I'm sure this must be a bug of some sort, courtesy of Atari corporation...

I had the same problem with NVDI 2.5.. Since I've bought me NVDI 4.2 I
have no problem with printing on- or offline with CAB. You get exactly
printed out what you see on the screen.

Well, "CJ" is the end of an ESCAPE command sent to your printer, but
your printer did not recognize it, so it print "CJ".

I completely rewriten the escape sequences for canon bj10 in nvdi
3.01/3.02 because of this kind of error.

> The only thing I can see that is weird about the NVDI setup is
> that the printer driver is listed in the PAGE SETUP menu as PINP.S.SYS.

Take a look at your "ASSIGN.SYS" file. There is a space char (blank)
to remove juste before PINPRN.SYS.

On 4 Dec 1996 09:45:46 GMT, "Antoine 'Dexterin' BRINQUIN"
<Antoine.Brinquin@Infini.fr> spaketh thus:

>One of my friend get a pc and want to transfer midi files from his atari to
>his new pc, how can he does ?
>Thanks a lot

Hi Antoine,

I only just saw this message even though it's quite old I haven't seen
any replies.

To transfer files saved as a standard MIDI file between PC and ST is
quite easy. Format a bunch of 720k discs (standard Atari DS/DD) on the
PC, remember to set format to 720K. These can then be read by both
computers with no problems.

Thanks for the suggestion. You may be correct. The drive came out of
an
embedded control system that didn't use DOS, UNIX or anything standard.

Deer Atari Peeps,

I'd be very cautious about calling this number, there's a whole series
of scams on the go at present involving extremely expensive charging
rates/tolls. Illegal in certain countries but not in others. Even a
short delay waiting in a queue costs a lot of money, and there's no come
back it just goes on your next phone bill. Likely you'll pay dearly for
finding out about this `new' discovery. Ask yourself... why no E-mail?

Bye for now,

Ali.

Ummm, that add states Hz, and does state "vertical"
sync. There is no mention of the important one for
Atari, horizontal, but as I understand the article
they are NTSC compatible which means 15KHz Horizontal.
I'll jump to the ViewSonic page and check this out.

so I've assumed that MINT is not worth pursuing just for the internet
connections. Is this : correct?

: I'd appreciate being educated on this!

You should be able to run a reasonable MintNet setup in 2.5 megs. 4 megs
is needed only if you plan on running X Window. It may be a tight
squeeze, but you should be able to run Mint, MintNet, the built-in AES,
and CAB without problems. If you want a better AES (eg AES 4.1 or XaAES),
you may need more RAM.

Now that I am no longer held hostage by any pending orders,
I must state, quite sadly too, beware of ordering Atari items
from Toad. Unless you can get Jennifer herself to check the
stock and tag it with your name, you "might" be told the item
is in stock, and held hostage for quite some time by your order.
Jennifer walks on water as far as I am concerned, but the newbies
that are now on the phones know little or nothing about Atari
products and will tell you what you want to hear.
Toad has been a great provider of products and service for
longer than I have been an Atari user, but with the changes
they are making within their business, they really need an
"Atari only" line.
Another thing that pissed me off slightly was a hardware request.
When the Expose's arrived a long time ago, only seven units
I believe were imported. My first unit worked, but had problems
with dot's appearing on the captured video. I exchanged it for
what I was told another unit. Weather it was the same unit or
not will never be resolved, but after returning the item a couple
of times, I was told a new shippment was comming and just to wait
for that. Toad not receiving a new Expose shippment was not their

fault. I waited and waited (as everyone else has) but took credit towards a C-Lab Mark X. When it looked like there would be no new shippment, I contacted Ray about purchasing back one of the returned units. He said he didn't have the time to check out which one worked with just the dots and which didn't work at all, but he would look into as soon as the time became available. For most of this year I sent mail asking if he had a chance to put me an order together. Just today, in response to my last letter, he said he had forgotten I wanted one (forgotten about 10 or 15 request and about $6000.00 in orders from myself and place of employment) and sold them all to another party.
Well thank you for all the good service you provided, Toad.
I hope you do well in the PC market, but as for Atari related software or hardware, i'll be shopping with the many other dealers left in the U.S and Canada. They may have slightly higher prices, but offer service Toad hasn't had for a couple of years. If your going to drop Atari service, you might say so. Cybercube even states in their web page they no longer support the Atari platform, but we do offer the remaining items for sale. At Toads new multi platform web sit, I don't know if their trying to sell me a new PC or list Atari hardware and software they may or may not have in stock. It's pretty confusing.

If this pisses off some of the "old timers", i'm quite sorry. It's just the way I feel. I know there are many positive stories to be told as well. Why else would I have spent so much at one dealer........

Thank you for all the good time's and exciting orders I did recieve.

I think you will find if you check that the ISP's that have been around
awhile had SLIP first then added CSLIP and now have added PPP support.
Those that are new startups, go for PPP and don't want to bothered with
"old" technology! Read they bought the darn thing setup and running and
have no idea what they are doing, so don't ask them hard questions!

>
>Whatever...I agree that the sooner STiK et.al. work with CSLIP and PPP,

Got to agree with you here! I was luck that I had several ISP's to choose
from, so I could opt for the one with SLIP and a Unix shell, also the best
service 8^)

Would like to suggest that you might want to check out www.thelist.com
before giving up on finding an ISP that provides SLIP! That's how I came
up with concentric.net. By the way CNC or concentric.net is available in
over 200 major cities in the US and Canada (including Calgary) For $20.00/
month you get unlimited dialup and SLIP with a 5meg workspace or website!
Been with them for about 5 months and so far the service has been
wonderful, except for that hit that usenet took a while back from the
meowers! No I don't work for them or have a financial interest in the
company! Just still amazed that everything works after the way things
went at my former ISP!

I have no problem printing from CAB and NVDI (both text and images). I do use NVDI4; I don't know
that makes a difference. How much memory do you have? Before I uped my memory
to 14 megs it wouldn't print large pages.

p > We'll see what happens and post it here.
p > phantomm@harold.eastky.com

Um, you have to mess with the flags on _each_ of the import & export
files of Pagestream. They are actually little programs, and if set
to fastload, Pagestream will load just as fast on a Falcon as on an
ST. Without setting the flags, it takes _forever_! :) Um, this isn't
a setting within Pagestream - you have to use a program that sets
these flags.

4638. Wanted - email address for Toad Computers

Newsgroup: comp.sys.atari.st
Date: 1996-12-11 00:00:00 UTC
From: trevor@ccc.govt.nz
Message-ID: <1996Dec11.130533.1@ccc.govt.nz>
Source record: 132074

Does Toad Computers have an email address? I have a sudden urge to shop there, but I noticed last night they didn't advertise in any of my old ST mags, and I couldn't find any articles quoting it in the newsgroup yesterday. (I did notice their FTP site address, but that's not quite the same thing).

If someone does have Toad's (sales) email address handy, please could you email it to me?

Thanks very much,
Trevor.

> Mail to me for more info..

I used to use Megamax C, then upgraded to Laser C. I finally upgraded to Lattice C v5 in 1991 (and to v5.60 in 1994).

Both Megamax C and Laser C were good, but Laser was definitely the better of the two (faster, by far than Megamax, and faster than Lattice C 5 that I upgraded to next)

Megamax C was am early (1985/1986?) C compiler for the ST. It had a resource editor, compiler, linker, librarian, disassembler and a few other tools.

It was a K&R C compiler (pre-ANSI, I think. AFAICR "ANSI C" wasn't finalised until 1990/1991)

What set it apart for me was the one-pass compilation (its competitors were [slower] multi-pass compilers), and it generated reasonably compact and fast apps at the time.

However, all it's code was register relative and used two address registers for its initialised and uninitialised data (one for each), and both were limited to 32k. My apps tended to need 40k of one and 20k of the other, so I had to spend a while trying to swap initialised data to uninitialised data, just so it would link properly.

It lacked a debugger, though. Laser C had a _very_ good soure level debugger, though.

And the resource editor was a pain if you did any editing (to remove a spelling error, for example). It would not keep the tree indexes constant. You would need to remake all your app when normally you wouldn't need to, as you haven't changed the structure of the resource tree, just the text within it (which doesnt affect the indexes).

One nice thing about it though, is that you can have inline assembly language. The compiler IIRC was intelligent enough to save registers you use in your inline assembly, and it will fixup the labels used in your assembly code to be relative to whatever register is appropriate (if

necessary)

A quick (trivial) example from the top of my head:

(I haven't used Megamax since 1989-ish, so this may not compile 100%.
I'll leave it to your hacking talents to fix it if I am wrong)

```
int max = 1000;

set_vertical_scroller_size( wh, disp, tot )
int wh; /* window handle */
int disp; /* number of items displayed */
int tot; /* total number of items */
{
int size;

asm {
/* Assume 21 displayable lines,
out of 35,
gives an index of 600 (or 60%) */

/* d0 d1 d2 */
move.w disp,d0 /* 21 xx xx Load D0 */
move.w tot,d1 /* 21 35 xx Load D1 */
move.w max,d2 /* 21 35 1000 Load D2 */
mulu d2,d0 /* 21000 35 1000 Perform scaling */
divu d1,d0 /* 600 35 1000 Perform scaling */
move.w d0,size /* 600 35 1000 Store result */
}
wind_set( wh, WF_VSLSIZE, size, 0, 0, 0 );
}
```

disp and tot will all be set to the correct offsets from A6 by the
compiler. Likewise, max will be set to the correct offset from the
initialised-data base register (a4/a5? I've lost my manual sometime during
the eight years after I upgraded from it)

And you can have either the traditional semi-colon delimited comments or
C-style comments in your asembly source.

4640. Thoughts of STiK sans PPP

Newsgroup: comp.sys.atari.st
Date: 1996-12-11 00:00:00 UTC
From: cp298@torfree.net
Message-ID: <E283vu.HKn.0.sheppard@torfree.net>
Source record: 132076

Much as I applaud the work being done to give Atari users modern net access, I also can't help but think that Stik's lack of PPP support will kill it before long. I've been completely unable to find an ISP that even supports SLIP anymore. Come to think of it, most of the places I've called looking for an account didn't even know what SLIP was, which probably says more about the state of the ISP industry than anything.

Utimately what I think I'd like to see is the Oasis programming team (who already have PPP coded) working together with the Stik guys to create a common dialer/TCP stack that both the current slew of Stik-compatible software and Oasis can run on. Seperate programming efforts may work in the PC world, but it's not doing anything to help us lonely Atari owners who are looking at Stik's PPP capabilities with envy while realizing that Oasis just doesn't support the applications that we want to use.

And before anybody posts on the wonders of Mintnet, I'd like to add that I for one a) don't have the partition space to set up a Mintnet partition, b) don't really have the time to spend screwing Mint's Un*x environment together, and c) haven't been able to find a copy of GlueSTiK either.

At least a combined programming effort would probably benefit us all, and a common platform for writing net software on couldn't hurt.

Besides... I love using my Atari, and I'm getting tired of calling ISP's only to have them tell me: "SLIP? What's that?", "What's an Atari? Does it run Windows?", "We don't support Atari's", and "Buy a real computer."

I have noticed that PS loads up extremely slow
on my Falcon. Hmmm... We'll see what happens and post it here.
phantomm@harold.eastky.com

Just turn the Fast Load Flag ON. You can do that with Neodesk 4 etc.
I used to have the same problem and now PGS loads in about one minute
and I do load lots of fonts. Printing is about 3 minutes for the first copy of each Page
Calamus takes only about 1 and 1/2 minute.

Hear yea Hear yea, following Atari goods for sale....

SC1224's - 'refurbished' w/ original box & doc's...$65.
- 'used' tested, good working order, good brightness,color
& contrast...$50.
PCM124 - 12" 9-pin Atari PC Monitor-'refurbished' w/originalbox/docs
color/mono monitor, ask for details...$65.

Calamus SL with extra plug-ins(modules) original software & manuals, ask
for
details...$200.

Aerochopper R/C Flight Simulator w/ Futaba R/C Transmitter contoller,
software in original box with owners manual...simulates flying r/c planes
and helicopters..$125.

Jaguar with CD Player includes all 'pack-in' software as sold by Atari.
Original box and doc's PLUS extra controller, Raiden Cartridge, BrainDead
13 CD, Highlander CD
All for $200.

Golden Image Cordless Trackball- new- $15

AlberTT v1.2 Video Card for MEGA STE or TT. Dover Research Corp 1991
w/9pin to 15 pin cable + plus software...$125.
Here's more info on the AlberTT- 1024x768, 16 colors from palette of
4096.
Makes hi-res look like ST low res, just with a huge window.

Buyer pays shipping. Payment made by check/money order or COD.
Ship from New York, USA. /Danny/

Travis.... for instance, what is a 'simple document' in your opinion?
Give an example if you can or if you like, email me a copy of your CDK.
What frames are you creating? What modules are loaded? Try deleting
frames one a time to the clipboard and see if the problem persists or
goes away. Often times I have found vector frames can screw things up,
while at other times a raster frame can do it to me, even using SL.

: 10,000 machines a year? Where's the profit? Or maybe a better question
: -what's the use?

Well, clearly the idea was to sell 10,000 to a largely developer market to spur future sales, but Be was very upfront--they wanted to leave the "nuts and bolts", "spreadsheet 'n word processor" market to the WinTels, and sell to people who want computers, not just tools.

But this was not bespeaking of tens of millions of machines a year, which is what we're talking about if we're talking about taking on WinTel.

: Please use the appropriate newsgroups to continue the discussion.

It's relevant in that we're talking about alternative computing platforms, of which the Atari ST is clearly one. The same spirit that keeps people using the ST, the Amiga, 8-bit systems, etc. is the spirit that I feel is going to be the future for non-WinTel computing--which won't ever take over the market, but will keep computing fun for those who actually enjoy it.

Hi There,

I had quite a few problems installing HD6 to my Falcons internal Connor 84 meg hard drive. Seemed to have trouble identifying the unit. While it's entirely possible that I erred somewhwere along the line ,I wonder if there is anything I should know or any additional procedure I should follow to keep existing data and partitions while replacing the ahdi driver. (i.e.: should the ahdi sys file be removed before installation?) Initial results were quite catastophic and I need to learn a bit more before trying again.

I would sincerely appreciate any help anyone could give.

Thanks very much,

Jim Coile

You'll have to try the German FTP sites for hardware hacks.

Some (most!) are in german, but it's worth getting out the dictionary as
the hacks are really good!.

Have a look at Hallvard's FTP list for some of the premier sites..

Than why don't you install MiNT+MiNTNet on your TT then ?

MiNTNet has PPP-protokol (and also SLIP) and you just have to get CAB for
MiNTNet, which is just another .OVL-file for MiNTNet instead of the old
.OVL-file for STiK.

Keep Cool and Flying...

>b) don't really have the time to spend screwing Mint's Un*x environment
>together, and c) haven't been able to find a copy of GlueSTiK either.

a) what, about 5/10mb? I managed to, fit a basic MiNT setup (and GCC+inc+lib)
on 2 floppy disks, when compressed. Oh, and you dont need to dedecate a whole
partition - long filenames are not necessary.

b) if you use a standard kit (eg. KGMD) it shouldn't be that hard to set-up.
A better solution for MiNT-net is to get the 'ppp-kit' which also comes with
the mintnet stuff and docs. [dunno of KGMD has MN)

c) nope, I dunno where it is...

>is there exist a prog to convert quartet tune (.4v) to .MOD format
>file ?
>
>help me, i have more than 100 tune to convert ...
>
>thanks,fred.
>
>
Hi. As far as I know, there are no programs out there to do that.
The main problem with converting quartet files is that the samples are in a
seperate file. So to convert from Quartet to .MOD, the program has to load in
the samples, load in the .4V file, do a bit of magic, and out comes the .MOD
file.

Also, what specific MOD version? TCB tracker? Pro-Tracker
compatible? Sound-Tracker Compatible? Amiga Mod compatible (erk!)?

So you see, it is quite a complicated task!.

If I had the file format of quartet files, and the file format
of .mod files, I would be willing to give it a bash! (I.E. does anyone know
the formats?)

Cheers! Brian T. Innes

Hi All,

this is aimed at all those clever bods who may know something I don't:

At University, they supply ethernet novell net links to rooms. Handy if
you've a PC or mac as you can connect your machine up to the old internet and
stuff.

I'm after a way of hooking into this ethernet and converting it to a slip
connection for STiK or similar.
Can it be done?
Is there an alternative (WITH SOFTWARE!!)?

I know Mark Baker bought a PC simply cos it would do it, but I don't
particularly want (or can afford) to.

Surely there is a way around this by now?

A reply bu email would be appretiated

Cheers,

Yours etc.

David.

4671. Re: EPS, IMG and GEM convert to GIF?

Newsgroup: comp.sys.atari.st
Date: 1996-12-11 00:00:00 UTC
From: thopman@uoguelph.ca
Message-ID: <58melr$d5g@ccshst05.cs.uoguelph.ca>
Source record: 132107

John Norton (jnorton@nilenet.com) wrote:
: Is there a program that will convert EPS or IMG or GEM to GIF format?

GemView (or just about any image conversion program) should do the latter. EPS is a bit trickier, since there's so much variability in the "standard". If it's "real" EPS, you should be able to use GhostScript, and print to GIF. By "real", I mean it's ASCII, not binary, and GhostScript can process it. Don't bother trying this with PostScript output from any Corel program; it won't work, since Corel's PostScript output is just awful.

I have been told that KCS Omega works fine with Geneva. You may have to set it for singletasking, though; I'm not sure.

You can download a demo version of Geneva from www.pair.com/gribnif/ and you can get the full version from Gribnif Software, or from Titan Designs in the UK.

4676. SLIP rare in Canada? (Was: Re: Thoughts of STiK sans PPP)

Newsgroup: comp.sys.atari.st
Date: 1996-12-11 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <32AF08F0.4172@facstaff.wisc.edu>
Source record: 132112

Aaron et.al.,

This is becoming interesting...in recent discussions on comp.sys.atari.st, it seems those with the most difficult time finding a plain-vanilla SLIP provider are in Canada. Toronto, Calgary, and a month or so earlier, some one from Prince Edward Island (the latter fellow as I recall had moved there from Hamilton, Ontario, where he _did_ have a SLIP connection).

This may be a coincidence or not...maybe you folks north of the U.S. border are more inclined to post on this subject for some reason. If the perception is correct, is there a reason for it? Maybe your ISPs are just ahead of ours in the States and we'll all have to deal with the same problem soon? Or are the demographics such that they feel there's no reason to offer SLIP as well as PPP?

Whatever...I agree that the sooner STiK et.al. work with CSLIP and PPP, the longer-lived and more widely used they will be.

Message-ID: <58mrsg$qnq@huron.eel.ufl.edu>
Source record: 132114

I have a very useful program for ST user. It came with C-Lab Notator and its name is SOFTLINK. It enhables the user to divide memory into partitions. You can load about 9 programs and use a key combination to instantly switch from one to another.

It comes with and LINK Edit.PRG so set the RAM Partitions and the program once loaded is reset protected.

It works best on Mega 2 and 4 and the program is very small (468 bytes!)

I wonder if it is avalable to all users or if it is Legal to distribute it?

guitarra.

PS. The Softlink.PRG is very very stable.

4681. Getting DL'ed progs on my 520ST

Newsgroup: comp.sys.atari.st
Date: 1996-12-12 00:00:00 UTC
From: brain@slip.net
Message-ID: <58nt2e$3kp@cronkite.polaristel.net>
Source record: 131919

I went ahead and bought a 520ST for $40. It has a SM124 monitor, an SF354 floppy (SS), and a mouse. NO software. I tried formatting a disk on the ST in Single-Side mode (or course), putting it in my PC and running ST2PC10. I then could get a directory on the PC. I copied starter.tos and an lzh file to the disk. It will not run starter.tos or a few other binaries I tried to download. I copied a small text file to the disk and I had no trouble reading it. I even tried viewing the .tos by renaming and double-clicking to view. I saw a couple of lines of char's before the EOF. Can anyone help??

I opened it up and found that it has a 6-chip ROM, and two sets of 8 RAM chips (41256's). The model on the mainboard was Atari CO70243 Rev. B (I am not sure about the 0's/O's). What options do I have for expandability as far as RAM and disk goes? I already have 2 540mb SCSI drives that are not in use...

Thanks alot.
Andy Filer, brain@slip.net

Tom.... can you email me or post a list of the files I need to d/l from the libs. I see that paderborn has a slug of Mint/MintNet files and an XaAES folder too!

Thanks Tom...

Keith

4691. Your GOD Loves You - YES YOU!

I hope that you know your GOD loves you, no matter what GOD you believe in. Thank your GOD for life and ask your GOD to let you live as your GOD would want you to. When we look closely at GOD we begin to realize that we all believe in the same GOD, we may see GOD in different ways, but GOD will always be GOD. There can only be one GOD, and that one GOD loves us all, and wants nothing but the best for us. If your in doubt, just remember GOD works in mysterious ways, there is a reason for everything...

God thank you.

> in use...

Hmm, can you fit a DS/DD floppy into that case, as this would double your disk space for a small outlay.

You will need a host adapter to convert ASCI (Atari) to SCSI, this should allow up to 7 or 8 SCSI drives to be added.

Memory expansion boards can be bought which will allow up to 4 megs.

More important is the TOS version, what do you have?

TOS <1.02 is not so good.

: so I've assumed that MINT is not worth pursuing just for the internet connections. Is this
: correct?

: I'd appreciate being educated on this!

It's 1 meg, 2 megs for a minimum realistic system with GCC, etc, but I
would have though GCC would have struggled badly with 2 and would need 4.
Same with X, but X window isn't particularly sensible with 4 anyway.

Bottom line is, for something like PPP Kit, 2.5 meg should be fine.

Cheers,

Paul.

Well, I dunno much about this sort of thing, but I do know that you trained
it on speech, and if you said 'information' it recognised what you had sad,
and cause a menu selection of the about program option under Desk menu.
I call that speech recognition...

It really was very buggy (or the version I had, anyway) and required MultiTOS
to do anything vaguely useful.

4699. DTP: What set up?

Newsgroup: comp.sys.atari.st
Date: 1996-12-12 00:00:00 UTC
From: B.S.Senior@bradford.ac.uk
Message-ID: <58ot6v$1v6@columbia.acc.brad.ac.uk>
Source record: 131937

I would like to know what alternatives there are for DTP setups on Atari ST machines, and what software/ram etc. would be required. (To be used for writing reports (WP style with graphics import) and also posters etc.)

I assume a printer and hard drive is already available. I already possess a Low Power program, and now require something to match software on PC's.

I am not sure on current versions, compatibility, etc. (eg Speedo and NVDI).

My ideas so far have been:

a) Papyrus, 4meg ram, NVDI-3 Colour
b) Calamus 1.09n Cheaper but black and white
c) Calamus latest version. Cost?
d) falcon with...

These may be 'wrong' or 'silly' please ammend/update. Has anyone got a setup they recommend, where everything seems to work without clashes?

Thanks.

Have a look at CLA3.LZH, David.

It's a logic/board designer by Craig Graham.

Other alternatives are CIRCUIT.LZH and PLATIN.ZIP.

You may have to poke around a few sites to find them as they are fairly
specialist.

I want to bypass scanning completely. EPS to GIF via GhostScript sounds like the trick! I use Pagestream. Can I use GhostScript with Pagestream? The reason that I ask is that, even using the command "eps" in Pagestreams "special" box in the "configure printer" menu, Pagestream refuses to recognize the resultant print file as an EPS graphic (won't load it!). (Err, did I explain that right?) Since the graphic I want to convert to GIF is line art, I have been very disapointed with scanning.

4708. TOS 2.06 disk nonsense (was Re: Disk drive won't stop after bootup!)

>you can go to my FTP site at:
>
> ftp://ftp.sn.no/user/hallvart/atari/fixes/sos_206.zip (223 Kbytes)

OK, to cut a long story short: does anyone know what if any changes were made in the disk handling routines of TOS 2.06? I ask since I have experienced that certain disks do not load and are not recognised. Cases in point are the games The Chaos Engine (Bitmap Brothers) and Magic Boy (Empire).

The demo versions of both these games work just fine on my TOS 2.06 MEGA STE, but the full versions don't - "Data on the disk in drive A may be damaged". There is nothing wrong with the disks, and it happened with several different copies.

Will a patch fix this? Knife ST tells me the bootsector format is unrecognisable and even Richard "UVK/Atari disk expert" Karsmakers is baffled :-(

I can't believe nobody else has come across this problem! I am desperate to play Magic Boy on my MEGA STE and if it comes to it I'll go looking/asking for a cracked version. If anyone is going to flame, go ahead, I don't care because I have an ORIGINAL copy of this game and I am just a tad p*ssed off that I can't play it.

4709. *** Problems with Stik and new ISP ***

Newsgroup: comp.sys.atari.st
Date: 1996-12-12 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <58p1bc$4aj@jake.esu.edu>
Source record: 131947

I recently decided to try out a new ISP which does support SLIP.
Unfortunately, no matter what I do, Cab (or any other program) will make
the connection fine, but it'll sit there with "Receiving 0 bytes". A few
lights on the modem will blink on and off, but nothing gets transferred.
This only happens when I tried my new internet service provider, my old
one had no problems (except for the fact that it was terribly slow). I'm
getting an IP address just fine, and I know the DNS and other settings
are correct. The only thing I can possibly see as a difference between
the two ISP's is that my new one uses a numbered Async interface, where
my old one is unnumbered.
Any help anyone can give will be greatly appreciated. Thanks in
advance :)

4710. HELP PLEASE: Atari STE. Can I use VGA Monitor

Newsgroup: comp.sys.atari.st
Date: 1996-12-12 00:00:00 UTC
From: Andy Leeds <abk35@dial.pipex.com>
Message-ID: <32B0184B.49B3@dial.pipex.com>
Source record: 131948

Hi All.

A friend of mine has an Atari STE which he has been running with a portable TV. Since buying a PC he wants to be able to run both machines through his SVGA monitor via a switch-box.

As he is not as yet a member of the surfing community I said I'd ask for him.

So the questions are:

1. Does the STE support/have a VGA video port ?
2. If yes, will an ordinary PC VGA monitor cable do the job.

Any help would be greatly appreciated.

Andy

The absolute finest DTP set up using atari hardware and software I have
ever seen is the follow (money is no object) set up:

Hardware:

Direct60 - 32 MB RAM, PCI video board, 17 inch monitor, .6 GB harddrive
CD-rom. (I'd add a sysquest drive to send those big post script files out
to the type setters).
scanner HP laserjet printer (although an HP800 would be good for proofing
those color pages).

Software:

DA Layout
DA Vector
Photoline
papyrus for small stuff and text entry.

This kind of set up can probably be put together for less than $5000 CND.
(okay maybe a little more than that but only a little).

The speed and sheer power of this system had be seen to be believed.

If I was going cheaper I would go with a Falcon Mark I or Falcon Mark X
Calamus SL and Photoline.

How does this compare?

The optimum combination (direct60/DA layout etc.) is probably the
same cost of a similar quality combination on any other platform. (lets
see -my compac prolinea cost 3500, the monitor another 900, the scanner,
printer and the sysquest drives cost the same, the software have roughly
the same price, hmmm...

So why give up the speed and efficiency of the atari platform?

All of this setup was demoed for me by Cris at computer direct in
Edmonton. Many thanks to Chris for all the time he spent.

Tom McCartney

Hi,

I have ne item left that I'd like to sell, although if I don't it'll make a nice addition to my permanent collection. EVERYTHING works. All cables and power supplies are included. Software included in package ranges from Altered beast, and Pascal to A BBS program and Swiftcalc. Please only inquire if you are interested and want to buy the system...for the whole thing: $120 SHIPPED!

-520 ST upgraded to 1 meg
-1 SC 1224 color monitor
-1 high res mono monitor
-2 SF314 DD
-1 mouse
-1 box of Atari disks (blank)
-100+ disks filled with archived and regular software

I am also willing to trade for Atari 8-bit stuff or old Macintosh stuff.

thanks for reading.

karl.

Hi!

As far as I know, the software to read the cartridge clock at boot up
is custom made for the paticular brand of clock. I myself have a
'Forget-Me-Clock-II' [with one flat battery: Its still waiting on me getting
time to desolder it and pop in a new one :)]

Once this autoprog has run, the STs time will be set correctly, so any
PD calender/alarm clock prog shall work.

Anyway, has your 'contact' got the autoboot program for his cartridge?
What brand of cartridge is it?

Bye for Now,

Brian T. Innes

In article <32a7f835.1573372@news.airtime.co.uk>, stosser@airtime.co.uk (Tony Greenwood) says:

>>use a TOS 2.06 dump from my STe. Is this possible? If so, how? Thanks
>>in advance.

Can anyone comment on the current status of TOS /GEM : ownership, copyright, etc. ?

I have TOS 2.06 Roms bought when Atari still existed, and I copied these to Proms for my STE (patched to get rid of some troublesome bugs). Now I've retired my STE with the original Rainbow Proms back in, and want to run Gemulator 96 on my PC. So I intend using a (patched) image file of TOS 2.06; I believe this will work rather than buying a ROM-reader card.
Will post my experience in due course,

P.T.

4718. AVI Audio/Video really works!! NEW AVI030.TTP

Congratullations! The NEW AVI030 for Falcon really works!

I was able to play in sequence all the AVI from my CD RAM. About 20
minutes of continous AVI.

I just have an 030 , so on 040 it should be super smooth playing.

It plays from the CD ROM or you can also copy the files to your HD
and play from there.

Congratullations, you finally did it.

available from

ftp.cnam.fr
public\atari\falcon\multimedia

PS. This is version 0.59d the previous version did not even load on
my Falcon! It plays better than N-Play (at least with my setup)
Does not like BLOWup but it does work also.

As long as you still own the original TOS 2.06 ROMs, you're within your rights of "fair use." You're only legally prevented from using the image if you sell or give away the original ROMs (and of course, you're legally prevented from distributing copies).

Since TOS is now licensed out to several firms who are still active in the market, it would be very unwise to violate the copyright; not only might that discourage the existing developers, you might find yourself in court as a defendent in an international copyright suit.

There are a number of possible servers. irc.warnerbros.com usually has less
than 50 users on the whole server, so it's good if you want fast comms and a
small group; however, unless you make arrangements by email in advance, you
may be the sole occupant of #atari

hades.dalnet.com (or is it .net?) is a possible site, as is irc.ais.net
(anyone in c.s.a.s who sees errors, please correct me - I've only just
gotten back onto IRC after finding my old account banned from efnet, so my
info is from a single session today).

Alos, IIRC, there was at least one server listed in the DEFAULT.CFG for
STiK. Let me check... Well, tehre was in an older version. There's a
server that seems to have gone to a "members only" policy recently,
irc.blackened.com - I dunno if you can get in there or not.

Once more - tell your service provider to turn off compression for your SLIP
account. If they are using any flavor of Unix, it's the "VJ" flag. If they
aren't, I dunno how they got SLIP working in the first place. :^/

I've seen others state that NVDI4 or Speedo (5?) are required; I use NVDI 2
(because I got it cheap!).

>How much memory do you have? Before I uped my memory
>to 14 megs it wouldn't print large pages.

I wouldn't consider 1k of plain text "large" - and the MSTe won't go beyond
the 4 megs it has always had. I hope to get more RAM in the TT eventually,
but for now, 4 megs of ST RAM is adequate. My Falcon is still in limbo
someplace - I guess a UPS driver must have decided he wanted to keep it a
bit longer, or something. %^(

I'm assuming that by "poxynet" you mean internet. The sheer volume of
information is overwhelming - that's why I and many others (notably
Hallvard) maintain Web pages with links to items of interest for Atari
users.

BTW, I'm having brain cramps today - I want to add the Atari support people
who live in Missouri to my Web page, but I can't think of their business
name to save my life. Anyone want to donate for a brain transplant?

Opinion:

The newer ISPs are being set up by people who are technically only
semi-competent; they're doing it as business, with an to making money for
the least possible effort. This means that they usually install Windows NT
as the NOS, rather than Unix, because it's designed as a "fake Mac" - meant
to be used by people who don't understand command lines. NT doesn't support
SLIP by default (it may be possible to add it; I haven't had a resaon to
find out), so you get PPP and no other support.

SUBJ: Multitasking or program switching?

a> Well, Omega runs fine on normal TOS. But when I start it with MultiTOS
a> on, I get immediately some kind of fatal memory violation error. When
a> I disable memory protection in MultiTOS Omega loads and kind of works
a> but when I switch to desktop and back the screen doesn't update right
a> and the computer locks up after a while.

What settings do you have in the program flag's, have you tried toggling
memory protection flag. Just a thought, but X-control explodes on me if
protection isnt set to Global.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

I was banned under my old account - why, I have no idea. Perhaps someone
(as opposed to s0meone - that's an aggravatingly confusing name, too)
thought it was funny to kick me and then have me banned.

I logged on briefly this AM and was able to access all of the servers in my
list - admittedly a short list. I must say that the mulitple colors of text
supported by AtarIRC in TT medium is a vast improvement over ST high!

: I would like to know what alternatives there are for DTP setups on Atari

I use Pagestream all of the time on a MegaSTE. It is great! If I need Linotronic output, then I just upload to the service bureau's BBS (file size is not a problem. I don't know if you are doing b/w, mechanical separations or true color (4 color). But, Pagestream can handle them all with ease. For getting into a high end (I am NOT jesting) DTP package, then Pagestream is the way to go. Although DA's, Calamus, etc. have many more features, Pagesteam is hands down the most powerful and easiest to use for it's price and age. It is also a true DTP program with very easy to use tools. I do hospital forms on it all of the time. There is also plenty of support out there. Learn from Pagestream, then move on if it is not exactly what you need. For a few dollars you can't beat it.

Just updated the Bookmarks page - I discovered that letting Netscpae's editor touch it had buggered a lot of links, including the one that would register you to be notified by email when the page changes. That's fixed and enhanced, a bunch of dead links have been purged, a couple more flagged for future removal if they don't come back up, and a new page added for submitting clubs and users' groups for the list.

Also take a look at the ftp site - I've added a few new items within the past week, including the SampleC demo. MIDI artists especially should appreciate this package!

How in H*ll was I supposed to get in there when I had been banned?

>so how can Rich start throwing
>weight about threatening to get people k-lined? Jesus.

I have no intention of getting any /individual/ banned. My original comment was that, /if/ the bots had not been approved for use by the IRC admins (and they darn sure have NOT been for hades.dalnet.com), that /if/ they continued to ban /people/, I would take it up with the admins.

I have found that my current account is not banned, and I have seen a message stating that the old lists of banned users have been purged, so (1) there's no reason to bother the admins, and (2) I was hardly throwing my weight around; simply pointing out that I (or anyone) with a grievance /can/ go to the admins for redress, when it's not possible to get into IRC due to a bot having committed a breach of netiquette.

And as for the "netcop" term - how, exactly, is attempting to get access to a service where one has been wrongfully denied entry by a rogue bot "netcopping?"

Christ! Maybe I should chuck the whole thing and go with the PC after all. I /expect/ pinheads to accuse me of everything from incest to starting the War of the Roses over there, at least.

I wanted to add a <G> there but I just don't feel like grinning ATM.

a) With the PPPKIT you must have... 1145 Kb free on disk, and the space to
install CAB, that's all. No Minix partition required, just plain TOS. This
1145 Kb its 285 Kb on the boot partition and 860 somewhere else. Well it's
for a minimum setup, it can grow if you download various MiNT utilities!

b) With the included install docs, it took me one hour to browse for the
first time. And I didn't have any MiNT experience before.

c) Me too (tm).

Bye! Bruno.

: Maybe I should have gone with Geneva :) Love Magic (just wish it was more
: stable)!

As MagiC replaces the whole OS and uses the hardware in a way, TOS and
MiNT were never able to, it is just natural that MagiC refuses to work
on systems with bad or instable hardware. Especially the falcon is a
machine with many hardware problems. Some machines work well, others
do not, even with the very same hard disk and peripheral devices. If
you have a machine that is not able to run MagiC there is no way to
change this execept using a ROM-TOS based OS (like MiNT or Geneva and
so on) or changing system components.

>(because I got it cheap!).

Just to straighten things out! Speedo 5 will print the text, but not the
pictures! At least not reliably! Sometimes it will make an attempt and
give you a messed up picture sized box, sometimes you even get a picture,
but that's real rare! Best to just turn picture printing off in speedo 5!
NVDI4 on the other hand does a good job of printing just what you see on
the screen, pictures and all!

>>How much memory do you have? Before I uped my memory
>>to 14 megs it wouldn't print large pages.

Got a 4 meg STe and if the page is graphic heavy it will stop part way
through and format the second half of the page, but it does print it!

>I wouldn't consider 1k of plain text "large" - and the MSTe won't go beyond

Got a good one! Called suprflag.prg. With this one you don't have to set one file at a time! Heck I'll read in the doc file and let you see for yourself! Also a bit of Chet Walters AKA the \/\iz of \/\/izworks brand of humor! Anyone have ftp access to the archive at umich? If so I'll send it to you so you can PUT it there! Think I'll post it in alt.binaries.atari also, just to give the spammers something to wonder about, as if they ever read anything on the net!

Gentlemen: This is a "batch" setter-unsetter for the program flags bits in program headers. You can set it to set the FAST LOAD bits, the TT RAM bits and also use it to set the Multi-Tos stuff as well. It will do every executable file on every drive in your system, or it will do a single file or will do a root path and everything in it or a single path. This interface works similarly to Ulitmate Slide Show. Since most programs work with the fast bit set, and some don't, it can be a real pain to use a program that sets the bits on only one file at a time just so you can skip the three or four files that don't work with the fast bits set. So, use SUPER FLAGS to set ALL of your programs and acc to fast load etc. Then, one at a time, set the ones that don't work back to slow. This is on the order of the old joke, "Don't ask what's wrong with Dan Quayle unless you have all night, ask what's right with Dan Quayle so we can move on in a few minutes to other things."

Now, for you PageStream owners, note that all the *.IMP and *.PRT modules are actually programs that will load much more quickly and work just fine when the fast bit is set. Use SUPERFLAGS to set ALL files in your PageStream folder to FAST LOAD. If ya have a TT (hee hee) set them to run in TTRAM as well. Dramatic improvement in loading speed for PGS. Other programs which have modules (Dr. Bob's MVG et al) also see improved speed when loading modules "fast."

: recognize the resultant print file as an EPS graphic (won't load it!).
: (Err, did I explain that right?) Since the graphic I want to convert to
: GIF is line art, I have been very disapointed with scanning.

Let's see if I have this straight...You've got the line art in EPS form,
and want to convert to GIF. You've been trying to do this by printing
(from PageStream, presumeably), and then scanning it in and saving it as
a GIF? Regardless of what you're doing, you should still be able to
load an EPS picture into GhostScript, assuming the EPS is "good". If it's
not...well, you might be forced to try various PC programs to find one
that'll do the conversion for you.

In <yvv20cx83ly.fsf@emw.ericsson.se> Magnus Kollberg wrote:

>Why not use the Lan port? Is this for all Ataris then?

Ask woller & link.
That was my first question before the 1st release.

You need a romport for scanners, midicom-interfaces some midi-dongles.
CD-ROMs and also..

LAN only for the NeoN-Dongle OR a modem..
Sure, all Ataris allready have a romport..

My idea was to build a software how can use both, romport and lan.

regards, robert

```
:
: ChainXOR... Oh boy, another setup to run besides normal TOS, MagiC 4 and
: now MTOS too??? I don't think I want to move backwards to MultiTOS,
: unless of course someone points me to something new with Mint and the
: last stable AES to use for GEM.SYS etc. Are all the files (including
: AES) available from umich or paderborn?
:

It's not necissarly a backwards move...it really depends on what
you need your machine to do...and which machine you have.

I don't use mint, because I've no need for it...but there are a lot
of people who want/need the unix environment...and as for heavy
networking...it is about your only choice at present other than
linux m68k, which is rapidly improving, but still isn't quite as
stable as mint. If you would like to "try" Mint...the TAF package
is a very basic, easy to set-up package that boots to X-windows.
There is an X-term, a msh shell, telnet, ftp, and a graphical web
browser called Chimera included in the package...as well as the
basic mint-net, and the basic archive tools for handeling your files.
It can be found at Hensa. Setting it up requires that you devote
a 5 to 10meg (or larger if desired) hard-drive partition. You simply
copy the downloaded archives onto 5 disks (3 if you've a 1.44 floppy)
run the shell...tell it which partition you want erased and converted
into minix...and within 10 or so minutes you'll have it installed
and ready to run!

If you have a TT or Falcon, Mint is quite usable...even better if you've
boosted your clock speed or installed a processor upgrade. It will
also run on a 4meg ST or STe, but you'll soon run out of memory under
X-Windows. If you've Geneva, it can be used as the AES, or if you
can find a good Multi-TOS AES someplace...you can greatly reduce the
amount of memeory Mint will require, and run mint-net with CAB, and
many of the standard text type internet tools inside a VT-52 window.
```

>It's a logic/board designer by Craig Graham.

I wrote CLA (smiles proudly) so I think I should correct this.
CLA is a schematic capture and digital simulation program
with addins for FSM design + simulation, a VHDL compiler,
and a PAL/GAL synthesis program.

It doesn't do PCB layouts....

BUT - there are at least two professional quality PCB packages
available on the atari. I've got demos of both of them...the most
recent (PCC - Printed Circuit Creator) is a really nice bit of work,
and to be honest, the other, which I've never seen on the Net,
someone sent me a demo after reading a review of CLAv2 in
Atari World, is also lovely (I've forgotten it's name though).

Both support auto-routing, pad placement libraries and provide
an auto-router. And they're a sh*t load faster than the PC based
monstrosities I've used in the past.....

The demo of PCC is on ftp.cnam.fr somewhere....

>Roger
>rcain@nest.demon.co.uk

Good of you to remember CLA Roger, it's sort of died a death
recently esp. since I started work on XaAES.

Craig.

] : (Err, did I explain that right?) Since the graphic I want to convert to
] : GIF is line art, I have been very disapointed with scanning.
]
] Let's see if I have this straight...You've got the line art in EPS form,
] and want to convert to GIF. You've been trying to do this by printing
] (from PageStream, presumeably), and then scanning it in and saving it as
] a GIF? Regardless of what you're doing, you should still be able to
] load an EPS picture into GhostScript, assuming the EPS is "good". If it's
] not...well, you might be forced to try various PC programs to find one
] that'll do the conversion for you.
]
] THeo

There is another approach you might take as well. Output the eps file from
Ghostscript to disk using the Deskjet printer driver. There is a Pagestream
utility which will convert a deskjet print file (on disk) to a .IMG file.
Convert that to .GIF using any one of a million converters and you should be
OK.

I am sure that Pagestream has printed *some* eps files to non-postscript
printers for me, in which case print it to .IMG file direct from Pagestream.

Hope this helps,

```
:
: I think you will find if you check that the ISP's that have been around
: awhile had SLIP first then added CSLIP and now have added PPP support.
: Those that are new startups, go for PPP and don't want to bothered with
: "old" technology! Read they bought the darn thing setup and running and
: have no idea what they are doing, so don't ask them hard questions!
:

Sounds to me like simple "PIG HEADEDNESS". SLIP is a well tested and
proven protocol that almost any machine in existance can be made to
communicate in. Everything I know of...from system 7, to Linux, to
BSD/ATT/BERKLEY Unix, VSM, OS2, Windows(NT/95), etc, etc, etc, supports
SLIP. In most cases, it's simply a matter of setting flags on a singular
TCP/IP program that is launched upon login. Places that don't allow you
to choose between at least Slip, PPP, and CSlip most likely don't deserve
your buissness anyway...as they are just being lazy, or conciously trying
to force people to a smaller base of software to choose from for internet
access. I am in a very pro Intel area, but at least my provider wants
my buissness enough to take five minutes to tweak my account so I can
use Slip, or what-ever method it takes for him to get me online.

Just my 1/2 a penny's worth,
Brian

>
> Leslie

I have two Falcons, and did have a C-Lab Mark X. One was purchased with
the 80meg Conner internal 2.5" IDE drive. You will get transfer rates
around
850kb/sec with that drive. I have connected 3.5" EIDE drives to them and
transfer rates can reach over 3mb/sec depending on the drive and driver.
You will need an Amiga 2.5" to 3.5" IDE cable, available from most Amiga
dealers.
This machine was housed in an aftermarket case in order for the drive to
fit.
You "could" fit a 3.5" inside the standard Falcon, but it would be VERY
tight.
On my sons Falcon, I just installed a Toshiba 1.03 gig 2.5" drive.
Transfer
rates with this drive were 2.8mb/sec, and was a direct replacement for
the
Atari furnished Conner, brackets and all.
All the machines came with the headder for the 2.5" IDE connection. I
have
never heard of an "external" board for the Falcon IDE, or SCSI for that
matter.

The Falcon field service manual does not show any revision that came without
the internal IDE connector. Maybe you have a "Sparrow" (lucky dog).
The MarkX C-Lab, while not having an internal IDE installed, did have the
connector. It functioned properly.

Mike

>so on) or changing system components.

I'm afraid this sounds a bit of a cop out to me :(

My Falcon is TOS4.04, 127meg H/D, PowerUp2, ScreenBlaster1.01 (soon to be a
Nemesis board/Videlity).

My main problems with Magic are:

1. Failure to boot 3 times out of 5. 'FATAL ERROR IN GEMDOS'. Reboot needed
(sometimes several). This happened with MagiC4 also. Could it be to do with
ScreenBlaster?

2. 'Destroyed memory block/Dump to disk/Try to recover'. I get this quite a
lot. Dunno what dump to disk does (doesn't seem to do anything).
The recover option fails 3 out of 5 times too. Although that is better than
Magic4. Magic4 NEVER recovered in this situation!

3. Problem with JPEGD. When trying to use the Brainstorm Decoder under
Magic5, it often locks up the whole system (needing a reboot).
Rebooting Magic does seem to cure the problem. It almost seems that the
FIRST time Magic loads it does not initialise something correctly.
Subsequent loads work ok. Any ideas? If it was a JPEGD problem then why
would a reboot of Magic solve it? Thus I think the blame can be placed on
Magic for this.

Now I know that you seem to take offense, Andreas, when anyone criticises
Magic, but I do think that MagiC is a marvellous achievement (I do use it
all the time despite the above bugs. If I thought it was crap then I
wouldn't, would I?).

But please 'listen' to the above points and 'consider' them. Don't dismiss
them out of hand as you seemed to above!! If there are genuine problems then

you ought to be trying to fix them!

Does anyone else with a Falcon have any of the above problems? Or is it just (as Andreas suggests) my 'crappy' Falcon!! If you do then please air them in this thread so that Andreas can see I'm not alone..

Gary

MIDI Switching Box Plans For Sale

Have you ever fumbled around unplugging and plugging in MIDI cables from one device to another? Here is a fast, easy way to switch MIDI cables on computers, synthesizers, samplers, drum machines, effects boxes; any MIDI device. It eliminates the need for swapping cables. Anyone with more than one MIDI device should have one or more of these. Professional and home recording studios will find this item indispensable.

The MIDI Switching Box (MSB) can be used for a number of varied and useful applications, from a simple MIDI on-off switch, to a switching component in an advanced MIDI studio. You will find many uses for this simple and economical device. We use them all the time to quickly reconfigure MIDI devices in the studio.

While you can buy a MIDI Thru Box that will split a MIDI output signal into four or more outputs, it will NOT reroute data from one place to another. You need a switch box for this.

So, if you want to reroute MIDI data from one device to another, you can:

1) Get up, reach around your equipment, and unplug and plug your cables,
2) Buy an expensive electronic switcher,
OR
3) Build the MSB, and reroute your MIDI data stream simply by throwing a switch.

Swapping cable hassles are history!

Here are some things you can do with the MSB:
1. Switch a slave keyboard (or any MIDI device) on and off.
2. Switch a master keyboard to either of two slave keyboards/modules.
3. Switch a master keyboard to either a slave keyboard or sequencer/computer.
4. Switch a slave keyboard to either a master keyboard or sequencer/computer.
5. Switch a sequencer/computer to receive MIDI from either of two keyboards.
6. Design any other configuration, depending on your needs.

Assembly is straightforward, just a few tools and soldering iron, and should take less than an hour. All part are available at your local electronics store for under $10.

Complete building instructions, parts list, and studio configuration diagrams included.

MIDI Switching Box Plans
Price:

$5 (U.S. / sent first class)
$7 (outside U.S. / sent airmail)
Cash, check, M.O. No credit cards.

Last time it happened the document was 2 text frames and 1 raster frame.
1 text frame had about 20 characters in 48 point Dandy. The other was
also about 20 characters in 16 point Times. The raster was transparent
with the frame set to 4 point with rounded corners (approx. 2.5"x4").
I can't E-mail something that I can't save to disk.
I tried recreating the above described document again. This time it
didn't give me a problem. It might not have been exactly like the one I
couldn't save (i.e. point sizes and frame dimensions), but it was close.
I'm using 1.09, not SL, so I don't have any modules to load.
Next time it happens I'll start deleting some of the frames like you
said and see what happenes.

Travis

Gary Priest (gary@the-gap.demon.co.uk) wrote:
:
: 1. Failure to boot 3 times out of 5. 'FATAL ERROR IN GEMDOS'. Reboot needed
: (sometimes several). This happened with MagiC4 also. Could it be to do with
: ScreenBlaster?

I had some problems with ScreenBlaster 3, most of the time it didn't find
it's configuration-files. It never crashed though. But once it displayed
some C-source I had on partition D instead of the rez-selector... Don't
blame this on MagiC though, my impression is that the ScreenBlaster
software is very buggy.

: 2. 'Destroyed memory block/Dump to disk/Try to recover'. I get this quite a
: lot. Dunno what dump to disk does (doesn't seem to do anything).
: The recover option fails 3 out of 5 times too. Although that is better than
: Magic4. Magic4 NEVER recovered in this situation!

Yes, this happened a lot when I used MagiC too. Running MAGTOROM.PRG (Uses
the 030-MMU to protect MagiC.) resulted in fewer crashed but it still
crashed atleast once per hour.

: 3. Problem with JPEGD. When trying to use the Brainstorm Decoder under
: Magic5, it often locks up the whole system (needing a reboot).
: Rebooting Magic does seem to cure the problem. It almost seems that the
: FIRST time Magic loads it does not initialise something correctly.
: Subsequent loads work ok. Any ideas? If it was a JPEGD problem then why

Same here. I've heard a lot of people complain about this, so it's
certainly not your Falcon's fault. At first I believed that it was my
accelerated DSP that caused it, but I've checked it a *lot* of times under
TOS 4.04 and it never crashed.

: Does anyone else with a Falcon have any of the above problems? Or is it just
: (as Andreas suggests) my 'crappy' Falcon!! If you do then please air them in
: this thread so that Andreas can see I'm not alone..

Well, I don't use MagiC anymore. N.AES is so much better (OK, it's not
quite as fast but almost.), and after the "VFAT-incident" (MagiC 5 totally
trashed one partition when I tried to use VFAT on it, and none of my
disktools can repair it.) I'm even more sure.

And I don't think it's very wise of Andreas to blame on 'crappy' or
'weird' Falcons, as almost every Falcon-owner will eventually install some
accelerator that stretches the Falcon's hardware to it's limits. Or even
better, hack the hardware themselves :-)

Id was not at all stable on My Falcon. Even the old Multitos did run
better. XaAES always crashes om My Computer. At the Moment it just won't
boot at all. Starting Cab than gives XaAES the rest in most cases. (well
running a Gem Application from a shel in TosWin under XaAES is even more
desastotrus...)

So how come that these can run stable on the Falcon, but not MagiC?
Yeah, blame the hardware, not the software. The hardware only
does what you tell it and others manage to do it right. I guess
it's pure luck then. Not that I have that many problems with MagiC
even on my 040 Falcon, but the main complaint about MagiC is the crap
memory protection and this is not on only on Falcon computers.

Yea, but you do have to ignore all the '1 pixel out' calculations on redraws, and the annoying way the windows dont get moved/resized if you are still moving the mouse when you let go.

Yea, it is getting more stable, but it still has a way to go before I would describe it as 'better'. :)

(BTW. oAESis isn't bad, but it still has problems - such as very slow redraw times on menus as it is sending WM_REDRAW messages to applications rather than blitting it as all other AES's do.)

I haven't noticed this one, though I tend to use the Apex viewers for
JPEGs these days. Perhaps I have already had to reboot by the time I
come to load a JPEG using JPEGD :-)

You are not alone. This is a real problem Andreas. I love the look and
feel of MagiC, it's a really cool OS when it works. However
increasingly I am getting fed up with it crashing and use Geneva more
and more. At the moment I am making a concerted effort to eliminate any
inconsistancies in my own system that may be causing the problems. So
far though, I have come up with very little apart from a memory leak in
Stewart.

I'm unconvinced about this since I have the same problem but have never
used ScreenBlaster. The same thing happens with BlowUp (which I used to
use) and Falcon Screen (my current choice).

Atari's PROGFLAG program won't do it either because it only looks at .PRG
and .ACC extenders. (Maybe also .PRX and .ACX...) Unless you're willing
to rename all those import export files to a temporary new extender, try
using SUPERFLG. It's a lot more versatile.

Hey all you Atari owners, why not check out one of the newest diskmags available for your computer.

Atari Times is written by Croft Soft Software and carries news and reviews of all the latest Atari happenings.

All you have to do is visit the Croft Soft Software web site and download a copy of the latest issue - it's as simple as that :)

Point your browser at:

http://www.users.zetnet.co.uk/polonowski/

While you're there why not tell me what you think too :)

Cheers,

Colin Polonowski
Croft Soft Software

Well, I'm not even sure that I would like to say that it's prettier either.
I don't like it at all actually. Looks like some mix between an Amiga and
X windows. The latest version looks better though. Not the Atari's AES looks
that great, but it's not bad at all. It's a bit clumsy, but with some small
changes like in MagiC it looks very nice indeed.

I don't think anyone use it except maybe Craig and some other just to test it.
It's not usable if you ask me.

BTW. How is it going? I havn't seen a new release in ages. Same goes for oAESis.

CAB works great when MiNT is not running. What in my CAB setup would affect
the way it works with MiNT?

>
>And BTW, you do _not_ need a Minix partition to use MiNTNet.

How do I accomplish this (without a Minix partition)? Is there an easy way to
setup MiNTNet (just the essential parts)? I sure wouldn't mind using the features
of MiNTNet but I have no experience with MiNT, I just followed the instructions
that were included with Geneva.

No, it is a 2.5 inch standard IDE connection. If you have a Falcon w/o an internal HD you may not even have the connection available (I bought one w/o and had to get an external board...) Otherwise a standard 2.5 inch IDE drive w/cable (basically a laptop HD) is what you need.

Jason Compton (jcompton@typhoon.xnet.com) wrote:
: Ok, I've been watching this newsgroup and visiting Atari web sites for
: months now, but am unable to answer some REALLY basic questions for
: myself. This is made worse by the fact that the rtfm.mit.edu FAQ
: clearinghouse doesn't have an entry for this newsgroup.

Try http://home.sn.no/~hallvart/pages/atari_sn.html for Atari ST FAQs.

: Atari web sites are wonderful at directing me to software, but pretty poor
: at telling me what hardware I might like in the first place. So, if
: someone would please direct me to a source or sources which will fill me
: in, in considerable detail, on the nuances of the entire ST and derivative
: line, I would greatly appreciate it. (I've seen it done for the Atari
: 8-bit line, and for the Amiga line, so I have to imagine that someone has
: done it out there. And BTW, I've read what Toad has to say, it's not
: really very comprehensive.) That way, I can make an informed purchase and
: find out what I've been missing for the past 11 years.

Part 3 of the New FAQ has a table listing features on various machines,
as well as detailed info on the Falcon and on the TT clones. In my
opinion, the best hardware choice would be a Falcon or a TT; used Falcons
with 4 megs and a hard drive are going for about $500 US; used TT's are
more, but are very nice systems indeed (I've got one, so I'm kind of
biased there :)).

4790. Help on Gemulator96

Newsgroup: comp.sys.atari.st
Date: 1996-12-13 00:00:00 UTC
From: far@endoxa.msoft.it
Message-ID: <58slap$jtc@server-b.cs.interbusiness.it>
Source record: 131891

Hi all.

Can someone help me please?
The Gemulator 96 Demo don't boot (from HD or floppy) with the option "Atari disk mode" activated, I, without this mode, could not read the original disk of my Atari Mega1!

With "Atari disk mode" deactivated the Gemulator 96 runs very well (bar that
in low resolution where doesn't function... only on my PC?), it's really a
beautiful software!

Thank you to all and excuse me for my bad English.

Filippo :-)

Tom Derrick (tom.derrick@acpu.com) wrote:
: Hi. I get 11 bombs quite frequently, whenever a program tries to
: access the fpu in my CaTTamaraned TT. The bomb list says 'Line 11
: emulator', whatever that means. I now suspect, because of the above,
: that my fpu is non-operational. Anybody have any ideas?

Line 11 emulator? Is there such a thing? IIRC, instructions beginning with binary 1011 are valid instructions, and thus don't need an emulator. If you meant to type Line F, then yes, there probably is something wrong with the FPU system; instructions beginning with binary 1111 (hex F) are FPU instructions. Try popping open your case and make sure that the FPU is firmly seated in its socket, and that there's no dust on it. It is quite possible (if the CaTTamaran accelerates the FPU to 48 MHz as well as the 68030) that the FPU has simply been fried because it's been run above spec.

I was planning to get Magic when I get Gemulator, but I guess Geneva seems
the best way to go. I use the demo for playing Gem games in low rez and
it looks good. :)

But I rather not spend $60 for TOS roms only to use $60 Geneva which
replaces half of it. So would it be possible to install and use Mint on
Gemulator and would I still need something like a TOS image to use it?

>

10 Line A exception
11 Line F exception (floating point instruction or old TOD internal use)
12-23 reserved exceptions
24 Spurious interupt
25-32 Interrupt level 1 to 7
32-47 trap 0 to 15
48-63 reserved exceptions

All unused vectors are pointing to the bomb routine, so when an unused exceptions happends the number of displayed bombs is equal to number of the exception that called th bomb routine. The maximum number of boms the Atari can generate is (AFAIK) 255.

I've tried it for brief periods, but due to the need to keep the UUCP
gateway up unattended, never installed it in a more-or-less permanent
setting. Now that I have the TT, perhaps I'll have time to do more with it.

I concur with your choice of DTP programs and now for just over $30.00,
you can't go wrong! Think of all those postscript type 1 fonts just
floating around out there waiting to be used 8^)
The trick to fast screen updates is to do the initial setup in
draft mode with pictures turned off! To get to the draft mode you go to
set greeking under the view menu and click on the draft button in the
set greeking dialog box. Fonts look crappy and pics are boxes, but the
screen updates really fast! When you have things arranged to your liking,
then go back and turn draft off to check placement and overall look of the
page. Nice thing about draft is even though the fonts look crap the
spacing is exactly the same, so placement is a breeze!

I have to agree with Rich! Since I got NVDI 4.11 I have been able to
reduce my setup files for Desk Manager WAY down! NVDI is much more
compatible than Warp9. Lots of stuff either blewup or misbehaved badly
with Warp9, with NVDI most of those problems are gone! Do miss my neat
bouncing clock calendar screen saver though!

John,

You were asking about reading "DOD" partitions using HD Driver v.6. Did
you mean "DOS" partitions? If so, run the BIGDOS program from your AUTO
folder and you will end up being able to read almost any size DOS partition
from your Atari. It is excellent! The BIGDOS program is in a folder
on your original HD Driver disk.

Bob,

I would really recommend that you use LZH310 for un-lzhing files.
More and more I am finding that DCX202C (or earlier versions) are not
able to uncompress a lot of the LZH file floating about. It's a good
shareware program (I've registered), but it's not being supported anymore.
LZH310 has a very nice GEM shell included and it is still being supported.
(LZH312 is the latest version, but you still need LZH310 for the GEM
shell). Wait a sec....it's not LZH310 but rather LHA310 and LHA310!
My memory is going. Now where was I....

Image Cat cataloguing software for pictures
Atari ST Basic sourcebook and tutorial

The whole bundle... EVERY ATARI item, for $50

MAC software and hardware:

Adobe ILLUSTRATOR 5.5 upgrade disks only, no manual $50

Backmatic 2.0 highly rated automatic backup utility $5

Correct Grammar 3.2, $20

Expresso Calendar, $20

Quicken 4, $5

Grolier Multimedia Encyclopedia 4.0 $20

Intermail/ Microsoft mail 1.36. many users. $5 includes shipping

Rental Center helper software and disks and big manual $5 includes shipping

PageMaker 4.0, manuals, disks, box, etc. use for cheap upgrade- COMPLETE $100

CD-ROM drive and software, double speed, "Power User brand" complete with
all materials and software... good as new... $100

Car Stereo items for sale:
All items are used but in working condition. No, They are not stolen, I
just went through a phase where I liked installing and swapping around the
stuff. Life's too busy to mess with it now. My lack of free time is your
Big Audio Bonanza. And no, I'm not a dealer.
Some items have boxes and/or instruction books.

Car Stereo:
Mitsubishi RX791EM AM/FM High Power auto reverse cassette deck I don't know the power output other than it says "high power" on the front and it was always plenty loud for my rock and roll. There is a color code table for all the wires and connectors so you'll know what goes where. All parts are there, faceplate, knobs, etc. and it is the two-knob kind (not DIN) with an analog tuner, pushbutton presets, auto reverse, Dolby, and "NK" noise killer. All in all a pretty good deck. $make offer

Car Stereo AMPS:
Craig PowerPlay 48 watt amp $make offer
Concord HPA51 100 watt amp $make offer

Car Stereo extra special stuff:
Yamaha YEC-400 Electronic Crossover $make offer

Car Stereo Speakers:
Sony ES-S52 40 watt Coaxial 5.25 inch round speakers with grilles $make offer
Kenwood KFC-162 25 watt Coaxial 5.25 inch round speakers with grilles $make offer
Craig V203 10 watt Coaxial 5.25 inch round speakers with grilles $make offer

Car ALARMS:
Cliffalarm IMS (interior monitoring system) made by Clifford. Remote operation from fairly far away. Siren chirps when alarm is set or unset. Visible flashing LED in the car warns theives that the car is alarm protected. LED on the remote tells you remote is working fine. Panic alarm feature sounds the alarm if you hold down the remote button for 2 or 3 seconds. Shock and motion sensor is sensitive to breaking glass, but not to leaves dropping or cars passing by. Door triggers. Automatic reset after predetermined time to protection mode.
$25

Audiovox car alarm *BRAND NEW IN BOX* Model AA9147 with 2 remote transmitters, remote panic, built-in adjustable shock sensor, instant-on for hood and trunk, manual override, dash mounted status condition LED, active operation, 114db siren, starter disable
$50

Home stereo stuff:
DBX NX-40 Tape noise eliminator and disc decoder. Much better than Dolby.
$make offer

CAMERA stuff:
Hasselblad view screen for 500CM:
Plain screen #42200- $20

Zeiss Ikon/ Contaflex 35mm camera marked "(lightning flash symbol) matic" on the top, and Contaflex on the 50mm 2.8 Zeiss lens, Compur-x leaf shutter. Lens is "convertable" variety, switchable from 50mm to 35mm by changing the front elements, although I only have the 50mm lens element. Built in meter, and even a rudimentary "auto" mode. With case. I'd call it very good condition... no dings or dents, the textured black covering is perfect, the chrome is perfect, and the black finish is perfect.

Optically, perfect. The only rough areas are the battery compartment has a little corrosion on the inside and a little brassing on the outside. A "ready-case" is included but the leather is torn where the front connects to the back of the case. Surely a collectors item- $150

Metz SCA-351 adapter for Leica $25

4810. CAB/ STiK

Newsgroup: comp.sys.atari.st
Date: 1996-12-13 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <bc6_9612140106@flight.org>
Source record: 131911

Well, I got my internet account. I did actually get a full web page or two, so it appears I am pretty close to getting this working. After accepting my money, my provider mentioned they will be ending SLIP & shell accounts in about 2 months. :(

Anyhow, I am having problems with CAB/STiK. I have a 14meg Falcon, unmodified, TOS/GEM. I installed HSmodem 6. I'm using all the 'stuff' that came with WWW131. I increased the ALLOCMEM= 225000 as recommended in the extra docs.

I'm getting lots of "Runtime error 204 at Offset $00063AC8" errors (or slightly different offset). Any ideas?

It is very difficult to get CAB to accept internet adresses in the first place. But, I have gotten a few to work. Many times when it looks for a URL, I get 'Read Error in File 'F:\www131\cache\00000001.html', and that is all it will do. Any clues? I'm too dumb about it at this point to know where to look for problems! I've tried deleting all files in the cache, etc. Thanks.

Source record: 131912

DZ>PAK68/3 Accelerator Board installed.

DZ>1) What is the maximum RAM such a set-up can have? (12MB max???)

4megs of ST-RAM and up to 64megs with the so called FRAK (FastRAmKarte)
but as 16meg 30pins simms are very hard to find at the moment only 16meg
of fastram are possible.

DZ>2) Will linux work on this set-up?

Yes. But then I would recommend to use the PAK with a 68882 math
co-processor and with 50Mhz.

DZ>I'm thinking this would be a cheaper alternative to buying a
DZ>Falcon since I want to use it mainly for linux.

Especially when you think about the speed difference between a standard
falcon running at 16Mhz and a ST with PAK running at 50Mhz :-) On the
other hand an afterburner (68040) accelerated falcon with 64megs of
fastram is faster.

4814. PPP Chat Script failure

Newsgroup: comp.sys.atari.st
Date: 1996-12-13 00:00:00 UTC
From: whitema@vance.cig.mot.com
Message-ID: <58rnfo$t8h@trotsky.cig.mot.com>
Source record: 131915

Hi all!

I'm trying to get PPP set up for MiNTNet, and am having a rough
timne getting the chat script to work. I'm using PPP 2.2.0e, and
the script "ppp-on" that came with it.

pppd starts up and the modem is reset (the CD LED goes low), but
I always get a chat script failure. The failure takes exactly the same
amount of time each time, no matter what I put in for the initial
TIMEOUT value.

I didn't have any trouble setting up my system for (C)SLIP.
Any help would be appreciated.

Thanks in advance,
Mike White

>together, and c) haven't been able to find a copy of GlueSTiK either.

Actually, this is not quite right...

a) You don't need any special partition - you just need a couple of
megabytes of free space on an existing partition.

b) Just use the PPP-Kit - it makes it quick and easy. Assuming you have
the right details from your ISP, I'm sure you should be able to have it
going in an hour or two if all goes well. PPP-Kit doesn't come ready to go
for PAP, however.

c) It is available from the author's WWW page - I searched for "GlueSTiK"
with Metacrawler and soon found it. There will be a link to the relevant
page in the links section of my WWW page too.

I suspect that this is a problem with the way you have CAB set up rather
than the fact that MiNT is running, or does it work properly when MiNT is
not running?

And BTW, you do _not_ need a Minix partition to use MiNTNet.

4817. AC Press Release Dec '96/1

Newsgroup: comp.sys.atari.st
Date: 1996-12-13 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E2Bu4I.9oy@cix.compulink.co.uk>
Source record: 131999

Press release 12 December 1996
==========
Atari Computing was launched this summer at Atari shows in London and Birmingham and completely sold out both days! Delighted by the response we reprinted Issue 1 and this too has subsequently sold out.

Mike Kerslake, the publisher, with over fifteen years experience in the industry has teamed up with Joe Connor, ex Reader Disk and PD/Shareware editor for Atari World, to create this new printed Atari magazine.

Issues 1 and 2 have featured contributions from respected and well connected Atarians including: Frank Charlton (STF features editor), Graeme Rutt, Jon Ellis, Nial Grimes, Mark Baines, Denesh Bhabuta, Carl L�fgren, Harry Sideras and Kev Beardsworth (Atari World regulars), Colin Fisher-McAllum (42BBS/AtariPhile/FFF), Howard Carson (Current Notes), Xav, Thomas Binder (ST Computer), Al Goold and Ed McGlone (STAG), Roy Goring, Chris Good (WAG), Richard Spowart and Chris Holland (Maggie), Steve Llewellyn (Calamus User), Jim Hornby (Wrinklies), Martin Milner (999 software), Colin Polonowski (Atari Times), Neil Martin, Mark Wherry, Andrew Harvey, David Stevenson, Robert Paton, Colin Munro...

We've also signed deals with the two leading disk based magazines, AtariPhile and Maggie to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out how much you've been missing!

Background

The closure of Atari World and ST Format during 1996 left the UK without an Atari specific newstand Atari magazine for the first time since 1987.

The men in grey suits expect us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We offer a Reader Disk to accompany each issue, buy it or not, the choice is yours!

We need is your support, it's going to be tough to keep going and it really up to *you*! Instead of wishing us luck post us a cheque to order your copy today!

Ordering
==========
As we're sure you'll appreciate launching a magazine in a declining market is a very risky venture and our print run has to remain conservative - we can't afford to maintain a stock of back issues for long.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today! If you decide to subscribe you will receive the first available issue, if we've sold out of an issue your subscription will start with the following issue.

Subscriptions

Many of you (and most of us) lost money following the Atari World debacle and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

Contacts

Telephone:

Unfortunately we have had to withdraw our telephone enquiry service due to
the large number of calls, many at unsociable hours, from people who
thought we were operating a general Atari helpline, rather than being
there to answer queries on the magazine. This helpline is now closed, and
callers will simply hear a recorded message to that effect.

Therefore all future enquiries about any matter concerning Atari
Computing MUST be made in writing either via email or by snail mail.
And sent to the following addresses. It would also be helpful if
letters, subscription enquiries and editorial material were on

seperate sheets within the same envelope. Ideally letters and and editorial should be on disk in ASCII format, or via e-mail or netmail if you have that facility.

General enquiries

Atari Computing
"Rois Bheinn", Overton Crescent,
Johnstone,

Atari Computing Issue #2 update

All copies of issue 2 which were ordered and paid for by the end of November have now been dispatched. Since then there have been numerous new subscriptions and these will be processed and dispatched in the same order we received them. Once Issue #2 has "sold out" any remaining subscriptions will commence from Issue #3, unless we receive other written instructions.

Subscription Payments:

These payments should still be made to the address published on subscription forms, which are available via email or snailmail.

Receipting subscriptions:

Just like every other magazine, your payment being cashed is your receipt. We cannnot issue receipts by e-mail, SAE, postcard etc. because of the additional work this would place on the volunteer staff.

Issue gone missing? Faulty reader disk?

Write/email the office or leave a brief message on the answerphone on 01206 852602 and we'll sort out the problem as soon as possible. Please don't use this number for any other reason - we won't respond anyway so save your money and our time!

About the magazine/Who are we?

Atari Computing is financed by the Atari Computing Group, based on CIX, and dedicated to supporting the Atari platform - We're delighted with the response from our readers and working hard to ensure future issues maintain the same high standard!

Atari Computing is an enthusiasts' magazine compiled and distributed by Atari enthusiasts. We're not a publishing company so our efforts have to be directed towards getting the magazine out on time - we do not operate an Atari 'helpline' but are pleased to help wherever possible via the Q&A pages in the magazine.

The Atari platform is alive and well!

Best wishes

The Atari Computing Group A|C|G

Ok, I've been watching this newsgroup and visiting Atari web sites for months now, but am unable to answer some REALLY basic questions for myself. This is made worse by the fact that the rtfm.mit.edu FAQ clearinghouse doesn't have an entry for this newsgroup.

Atari web sites are wonderful at directing me to software, but pretty poor at telling me what hardware I might like in the first place. So, if someone would please direct me to a source or sources which will fill me in, in considerable detail, on the nuances of the entire ST and derivative line, I would greatly appreciate it. (I've seen it done for the Atari 8-bit line, and for the Amiga line, so I have to imagine that someone has done it out there. And BTW, I've read what Toad has to say, it's not really very comprehensive.) That way, I can make an informed purchase and find out what I've been missing for the past 11 years.

(Let me say that I'm probably not in the market for a C-Lab 060.)

I am *not* sure about the following: (That's why I didn't write it.)

Nb Meaning

10 Line-A exception
11 Line-F exception

For instance, Line-F calls *can* be used to optimize code
generated by C compilers. Sequences of many frequently-
generated instructions can be advantageously replaced by
only one $Fxxx code. That's complicated...

12?? Don't know.

On TT030/Falcon030: ***Not sure at all***
13?? Coprocessor protocol violation
14?? Format error (??)
15?? Uninitialized interrupt

The 680x0 exception vectors can be found as of addr.$0008.L up to $0060.L.
($0030.L, and $0040.L to $005C.L are reserved by Motorola.) (L=Long)

4823. Bombs

Newsgroup: comp.sys.atari.st
Date: 1996-12-13 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <850447202@acpu.com>
Source record: 132005

Hi. I get 11 bombs quite frequently, whenever a program tries to
access the fpu in my CaTTamaraned TT. The bomb list says 'Line 11
emulator', whatever that means. I now suspect, because of the above,
that my fpu is non-operational. Anybody have any ideas?

Ben Senior asked:
B > I would like to know what alternatives there are for DTP
B > setups on Atari ST machines, and what software/ram etc. would
B > be required.
I would like to echo the sentiments of JNorton - PageStream is the answer that I use. I would also add that it is right next door to bulletproof on the TT in TT Medium resolution. I have done whole newsletters without saving (even though I should know better, by now). I run it from my 'fat desk' setup and from its own specially configured SuperBoot setup - no problems either way. About the only thing that I could ask for is faster screen redraws - I use Warp9 and a CaTTamaran accelerator, and it still takes a while to draw the screen. Should I tell my wife to buy me a T60 for Christmas?

> E-mail Me on Allister@sigil.demon.co.uk
>
> Thanx

Hi Allister,

I am currently trying the Gemulator 96 Demo, which is an Atari ST
Emulator for Windows. Below is a set of instructions which should
help you set up an Emulator on your P.C.

In order to obtain a working Atari Emulator you will need the following
files:

Gemulator 96 Demo from -

ftp://ftp.pulsar.net/pub/Stumble/Other/AtariST/Emulators/gem96dem.exe
This is the Emulator you will be using.

Magic PC Demo from -
ftp://members.aol.com/ashftp/demomapc.exe
This provides and Operating System.

Teradesk Desktop Replacement from -
ftp://ftp.cnam.fr/pub/Atari/Desktops/tdsk140a.lzh
This provides a GEM Desktop

Once you have these files you will have to do the following:

1. Unpack the Gemulator demo into a directory (I use C:\GEM)
2. Move the files sthdboot.sec to the root partition of the drive you are
using.
3. Unpack the Magic PC Demo into a tempory directory.
4. Move the file called magic_pc.os to the root directory (like
sthdboot.sec)
5. Unpack Teradesk (tdsk140a.lzh) into a directory (I use C:\GEM\TDESK).
6. Load up a text editor such as Windows Notepad.
7. Enter the line #_SHL C:\DESKTOP where DESKTOP is the path to Teradesk,
e.g.
#_SHL C:\GEM\TDESK\DESKTOP.PRG and save this file in the root as
MAGX.INF
8. Startup the Gemulator.
9. From the Options menu select First time Setup.

10.Click on the box next to Search for MagiC and then click on Search.
11.It should find MAGIC_PC.OS. Click on Close. The Virtual Atari will now boot
12.Keep your fingers crossed.!
13.If you like it go out and buy the full version.

If it should fail to boot press F11 to bring back the Windows Pointer arrow.
Press the Right Mouse button to bring up the menu. Select the Properties option from the Options menu.

Make sure that the Boot Disk is set to the disk the Gemualtor is running from.
Make sure Quick ST emulation is not selected.
Make sure Atari disk mode is not selected.
Make sure that the Memory is set to as high as it can go.

You should be able to find more info on the Gemulator from:
http://www.emulators.com

And more info on MagiC from:
http://members.aol.com/ashinfo/

Hope this helps.

Yours,

Ben Hills.

Dear Friends,
I am looking for the hardware MS-DOS emulator Falcon Speed.
Is it still for sale? It is mentioned in a Heim Verlag ad in the
latest issue of ST Computer, but when I called they said they
didn't have it.
Are there other firms that sell it? Can it be had second-hand?
Are there better alternatives? I heard some talk of a 486-based
successor.
Thank you in advance,

4836. Transferring data from Atari HD to a PC

Newsgroup: comp.sys.atari.st
Date: 1996-12-14 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <59055t$n2d@kendaco.telebyte.com>
Source record: 131768

I recently switched from an Atari TT030 to a Pentium 166 - fully intending to run a GEMulator card/software on it! - but have run into a problem.

The TT030 is already shipped out, but I have data on an external HD, sold along with the TT030, from which I need to transfer data to the PC. However, the PC refuses to acknowledge that the HD is actually formatted and contains valid data. I knew that the Atari could read and write DOS-compatible files, but I didn't realize that the disk had to be FORMATTED on the PC first. Bad thing to learn just now.

Anyway, I have two questions for those who may know:

1) Is there any program for the PC which will allow it to read the data from the Atari-formatted HD? Just so I can transfer my data and get the HD shipped to the guy who bought it...

2) Once the Gemulator arrives, will it read an Atari-formatted HD? I know it reads Atari floppies, but I don't recall having seen about hard drives.

Thanks for any input.

Take care,

Xcontrol.acc is an ACC that can "call" CPX (control panel extensions) and
use them. There are many varieties of CPX, covering a wide range of very
diversified functions. This was Atari's answer to the 6 ACC limit built-in
to the OS...You can load/unload the CPX's, make them resident in memory,
(or not) and other functions. You would use them all the time. I do. :)

Hi all..!

I was wondering..! I'm not very MiDi literate.. but I had an idea and thought.. Hmmm.. It might be possible!

I have a shitty old Yamaha PSS-680 PortaSound Keyboard with MiDi capibilities and was wondering if I would be able to take a bulk dump from another Yamaha keyboard, say another PSS-??? and load the PSS-??? sounds into my PSS-680 and use PSS-??? sounds with my PSS-680?
I know its a far shot and probably not likely.. but I had to ask!

I would like to know what is actually possible to change the sounds that are in there or am I stuck with what i have! A shitty PSS-680!! :(

Actually I should not whine! It's mine! It's paid for! and it's a great trigger machine! Not that I would run any of it's sounds into my music! That would just be a little insane! :))

Thanks
Johnny

Yes, you can connect EIDE drives to the Falcon. There are quite a lot of
users already running their Falcon with such a drive. What I don't know
is if these drives can be directly connected to the Falcon's 2.5 inch
IDE connector. For 3.5 inch drives an adapter is necessary, of course.

No. I'm saying that by connecting two solder-pads together on the circuit board you'll get an additional "high density format" option in the "format disk" menu on the desktop- regardless of what kind of drive you're using.

It's just an addition in TOS 2.06 since it was originally made for the MegaSTE as far as I know.

In order to be able to *use* the high density format you naturally need the additional electronics for the HD disk drive.

[....]

This is something I've been wanting to do with my STe and TOS 2.06 as well (or get help from someone with an EPROM programmer and the knowledge to do it for me). But I'd also like to include some of the auto programs I use in addition to the patches, so I could get the extra features/enhancements I'm using without having to wait for all those programs to load.

I don't have NVDI yet, but I was thinking that it would be nice to include in the TOS ROMs since it replaces the VDI routines (so there's no use in having the "old" Atari VDI routines there....
What do you think? Have you done something like this- I mean, adding additional programs to enhance your TOS?

By the way, which TOS patches did you use? I've experience that not all my TOS 2.06 patches are accepted by my TOS.. like the "arrowfix" patch- perhaps some versions of 2.06 have it fixed already (mine is the UK version of 2.06).

The following are some notes for an article (unpublished) that I am
writing. It is not complete or authoritative, but it may answer some
of your questions.
520ST - early 1985. Disk-based TOS 1.0, 1/2M RAM. System disk
includes TOS.IMG. Resolutions: ST Low 320x200x16, ST Medium
640x200x4, ST High 640x400x2 (only with mono monitor)
ST - Sixteen Thirty Two. According to some sources, Sam Tramiel.
130ST, 260ST - never released in US; some still in use in Germany?
520ST - late 1985. TOS 1.0 in ROM. System/language disk includes
DESK1.ACC, DESK2.ACC, CONTROL.ACC, SAMPLE.PRG, STBASIC.PRG. Max RAM
4Megs.
1040ST - early 1986. TOS 1.0, 1M RAM
Available sub-models:
'm' - built-in TV modulator and RF jack
'f' - internal floppy drive
Mega ST - 1987. Available with 2 or 4 Megs RAM. Pizza box case,
detached keyboard. TOS 1.2 (1.02), known as blitter TOS. TOS 1.02
was also put into 1040STs of that era. The Megas have the blitter
chip; the STs usually don't.
1040ST and Mega ST - TOS 1.4 (1.04)(known as Rainbow TOS) was
released on disk (developers only) circa 1989. Upgrade chipsets were
made available for 1040ST, Mega ST.
Mega STe - 1991. Pedestal case, detached keyboard. TOS 2.01, later
2.05, 2.06; NewDesk, FPU socket.
TT030 - 1991. TOS 3.01, later 3.05, 3.06, pedestal case, detached
keyboard. ST and TT resolutions. TT Low res 320x480x256, TT Medium

640x480x16, TT High 1280x960x2 (only with ECL monitor). 68030 processor, FPU.
Falcon 030 - 1993. 68030 processor. ST case, TOS 4.01, later 4.04. Lots of resolutions. Audio record.
STe - (enhanced) SIMM upgrades, 4096 palette. TOS 1.6 (1.06); later 1.62. Some lucky STe owner can tell you more - I have never owned one. According to one source, the change in TOS numbering dates from and is caused by the patch of 1.6 to 1.62. When Atari did this, the routines used to read the TOS version then believed that 1.2 should read 1.02, 1.4 should read 1.04, and all Newdesk TOSes reported a '0' in the first decimal slot.
Laptops, etc.
STacy - Tos 1.04, mono.
STBook - very limited production
Portfolio - dos 2.11, palmtop
(end article)
For price/performance/stability/compatibility, it is my opinion that the TT cannot be beaten. I have two; I paid about $500 for each (used, with monitors). They use more or less standard vga monitors; most serious software was patched (if necessary) to run on the TT. The Falcon has other sterling virtues, but the TT is quite a bit faster. For serious applications, especially PageStream, and/or multitasking, 4 megs of RAM is pretty much a necessity, and more is nice. For most anything else, 1 meg should do.
If you have a need/desire to run old games (1985-1989), you are pretty much limited to buying an old ST with TOS 1.0; fortunately these are *very* inexpensive and plentiful. I keep one around just for those programs that won't run on anything later. I wouldn't pay over $100 for one of these with a color monitor. Try for a 1040 - they are usually easier to find than a 520.
For *full* compatibility, there really is no 'single computer' solution; but the combination of a TOS 1.0 ST and a TT is about as good as it gets. I expect that the Falcon owners out there would either substitute one for the TT, or add it as a third machine. Stock Falcons are also pretty inexpensive today; If I were buying one, I would be looking in the $400 range and use a vga monitor.
You could do worse than to get and study the 'Atari Glossary' by Howard Carson; it should be available in both cut down and full versions from the Toronto Atari Federation.
Hope this helps!
"The Poor Deluded Soul" - tderrick@acpu.com

Actually, only PCs identify the difference between IDE and EIDE. Any
other platform will support EIDE just fine. I know this to definietly be
true for Atari, as I'm using one right now...

From what I heard via Emagic, SoundDiver and Logic (the sequencer only) work with MultiTOS and MagC!. These two should work with Geneva also.

AFA KCS Omega there was no such thing as multitasking when these were written, though Geneva seems to be more friendly to these type of programs. If you try Geneva try running them in single tasking mode while limiting memory. Cubase likes to take over the system.

There are a lot of 2.5"->3.5" adapters, mainly for the Amiga. If you use
one of these you can use EIDE-drives without problems. The main problem is
to fit the 3.5"-drives in the case...

4853. Umich DL problems

Newsgroup: comp.sys.atari.st
Date: 1996-12-14 00:00:00 UTC
From: ab078@sfn.saskatoon.sk.ca
Message-ID: <58uans$2ht@tribune.usask.ca>
Source record: 131832

I've tried downloading some files from Umich and a lot of them don't uncompress. I get a bad CRC errors. This happens with any format (LZH, ZOO, etc.). One file in particular I'm trying to get is 38400bps.lzh. I've tried downloading this one about 5 times. Each time I get bad CRC errors. I'm using DcExtract 2.06. I also tried UNLZH172.PRG which tells me there is a bad header on the file 38400bps.lzh.

Has anyone else had problems with Umich files, especially the file 38400bps.lzh?

******* COMPLETE ATARI 1040 ST PACKAGE FOR SALE *******

* Atari 1040 ST

* SM 124 High Resolution (Monochrome) Monitor

* SupraDrive Atari 20 MB Hard Disk

* Epson LX-86 dot matrix printer

* Cut-sheet paper feeder to printer.

* Avatex 2400 Baud modem

* Universal Mac Inker (re-ink your printer ribbons to
extend life, virtually unlimited)

* Lots of extra printer ribbons

Software includes:

* Timeworks Wordwriter

* Publishing Partner

* Edit Plus ASCII word processor (e.g. for Internet use)

* STalker 3 Internet connection software

* Flash internet connection software

* Opus spreadsheet

* Fortran compiler

* C compiler

* Misc Atari software bundled with 1040 ST

Yes, it all works. Everything is in perfect condition with the
exception that the printer feeder can be a little flaky off and on.

Asking Price: $300 plus shipping, OBO

Those are the words straight from my mouth (g), except that I think you mean
GEMENV.PRG.

That prog is the only one that I have found to work on my STFM to set and
activate the environment paths (aside from MagiC and the Autoswitch Poverscan
driver).

I may've got a bit carried away with that comment tbh. When switching directories across different partitions then a simple Alt<drive letter> will do the trick. It can't do it with different directories on the same partition AFAIK. Is that what you're saying the Harlekin FS can do?

mn> hardware modifications. The texts in CHIPS350 are mostly german.

I'd suggest that this hypertext would be a good place for one of the
volunteers that have come forward to start on, there is a lot of valuable
info (having had one section translated a long time ago).

Regards, Derryck

4865. German to English Translator..

Newsgroup: comp.sys.atari.st
Date: 1996-12-14 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <24749_hsideras@mettav.demon.co.uk>
Source record: 131844

Hi Derryck, on 09 Dec 96 you wrote: ...respect, brethren

HS>> Subject: RUFTRADE 2 German to English translator (E)
HS>> Translate German text into English. Fast, and with an extensive
HS>> vocabulary. File size: 150456
HS>>
HS>> It can be found in ftp://micros.hensa.ac.uk/micros/atari/tos/p/p118/
HS>> It's ShareWare, online as file micros/atari/tos/p/p118/ruftrad2.zip
HS>> ----------------
DC> The author told me that he wasn't continuing development on this due
DC> to the poor number of shareware regs

Shame... Mine was registered. I wonder if he's updating it for his own
purposes?

DC> I wonder whether this is the last and latest version released as PD?
DC> It's certainly very handy anyway!

The PD version only handled texts of a certain length. The last version I
saw was dated 5-9-95 - 476790 bytes (which is larger than the reg'd version
actually!)

Regards, Harry Sideras - UK Association of Atari User Groups

In article <47035675_000003_OASIS_NEWS@the-gap.demon.co.uk>
gary@the-gap.demon.co.uk "Gary Priest" writes:

Hi y'all,

I have some of Gary's problems too, but not on the scale he has had. I found MagiC would not boot up sometimes but stop at WINPUT/WINCOM (great utility by the way). Also a few boots ended with a crash as Gary descibes, but not many, I think an accessory is to blame but I don't know which one (it happens so rarely I haven't bothered to find out). With Wincom disabled I get very few probs so I expect it is a clash with software.

] My main problems with Magic are:
]
] 1. Failure to boot 3 times out of 5. 'FATAL ERROR IN GEMDOS'. Reboot needed
] (sometimes several). This happened with MagiC4 also. Could it be to do with
] ScreenBlaster?

Don't know but in view of my own experience with MagiC, I think it is quite likely.

] 2. 'Destroyed memory block/Dump to disk/Try to recover'. I get this quite a
] lot. Dunno what dump to disk does (doesn't seem to do anything).
] The recover option fails 3 out of 5 times too. Although that is better than
] Magic4. Magic4 NEVER recovered in this situation!

Yes, I get this too. I suspect the vt52 window especially highly. I hacve always had the occasional problem with vt52 which I use to run atarinos in previous incarnations of MagiC. I had a look at my autofolder and the MagiC APPS folder a while ago. There is so much in there it would be a miracle if there *wasn't* a software clash!

] Does anyone else with a Falcon have any of the above problems? Or is it just
] (as Andreas suggests) my 'crappy' Falcon!! If you do then please air them in
] this thread so that Andreas can see I'm not alone..
]
] Gary

Well I use a TT, so it can't only be the Falcon which is to blame..

However. I have used Geneva and still much prefer MagiC. Not that there is anything wrong with Geneva, but I just prefer MagiC.

It should be noted that the morons who write programs to spam the
Interent make lots of moeny - and get the users of their software
kicked off of their Internet connections almost immediately. It's a
sort of Darminian solution to the problem of spamming - people who are
stupid enough to buy software to spam, soon find that they can't get a
connection to use it.

And, on an Atari-related note:

For Sale/trade: Seagate Hawk ST31200N 1.2 gig SCSI drive. $175 +
shipping, or trade for a .28 dot-pitch VGA monitor.

4875. FS/T: Atari ST games [12/14/96] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1996-12-14 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <58v6u0$eb9@sjx-ixn7.ix.netcom.com>
Source record: 131854

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 12/14/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

Christmas season special

From 11/27/96 until 12/21/96, all Computer item orders over $50 will receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST, Apple][, C64/C128/Vic-20, IBM, Tandy and TI. All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer systems. You can find those FS/T lists on my web site.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very

rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

OK .. I got it figured out. IMG.PRT!! I like it as I can control the
resolution (several choices are available). Now I just need to convert to
GIF.

I have searched for a "img" to "gif" conversion program. Nothing in
english public domain. The demo version of Gemview says that it will,
but it won't! I am not sure I want to purchase the whole program
just to test that function. Hmmm, anybody know of a program that will?

Thanks to all of the people who have taken the time to help me, I really
appreciated it and it reconfirms my feeling that Atari has the BEST
network of help of all the computer platforms!

4878. X-Control and CPX's. How/where/why to use these?

4880. Calamus Font/Word Manipulation 1.09 or SL

Newsgroup: comp.sys.atari.st
Date: 1996-12-14 00:00:00 UTC
From: dooley@infomatch.com
Message-ID: <58vb7rmc1@berlin.infomatch.com>
Source record: 131859

Hi all..!

I'm looking to get the most outta my DTP package Calamus 1.09 or SL.
What I would like to do is.. Hmmm.. if you are fimiliar with MS Publisher
and WordART then you will know what I'm talking about here!

I want to take a word.. say.. "SoFTWare" and manipulate it into say an
object like a triangle. While still being able to do this with .CFN's
(Calamus fonts) Is there an easy way to do this? Or is there a module
you could load into Calamus SL that will do this within the program?
Or an External program that will also allow me to do this?

I was thinking maybe Outline ART might be able to do this?
Or maybe even DA's Layout/Vector?

Anyone have any suggestions or have maybe been able to accomplish this feat?

Please E-mail: dooley@infomatch.com

Thanks
Johnny

4881. We NEED a place to store our ST game cheats/Walkthroughs!

>>Hallvard Tangeraas (hallvart@sn.no) wrote:
: What does this discussion about Be-OS have to do in an this newsgroup?
: Please use the appropriate newsgroups to continue the discussion.

It's relevant in that we're talking about alternative computing platforms, of which the Atari ST is clearly one. The same spirit that keeps people using the ST, the Amiga, 8-bit systems, etc. is the spirit that I feel is going to be the future for non-WinTel computing--which won't ever take over the market, but will keep computing fun for those who actually enjoy it.

>I tend to agree that it's somewhat relevant, but I think it belongs in advocacy, rather than the mainstream newsgroup. I have looked at the BeBox, and it's a fascinating and bold approach to designing a new platform >from the ground up. Let's hope it succeeds in the marketplace.

Another way its relavent, is that alot of Be Folks had Atari 8 bits. then Amigas, now alot of the same innovative ideas that went into those "Jay Miner" systems, and alot more are being put in the Be Box.
In my opinion they are the only ones doing anything innovative and interesting both from a harware and software perspective. They are the new Atari... still...Ataris are a whole cheaper <g>.

TL> only! Don't have to use MINT, got SLIP!

I found an older version (1.2) that doesn't require MINT. Unfortunately, it doesn't handle unedited files, so it's no better than ESScode. Also, its command line handling is very weak; it doesn't like a path before the filename. You have to put the file in the same directory and then send only the filename. That makes it fairly useless as an installed application.

I hadn't noticed a geographic pattern, but who really knows?

> Maybe your ISPs
> are just ahead of ours in the States and we'll all have to deal with the
> same problem soon? Or are the demographics such that they feel there's
> no reason to offer SLIP as well as PPP?

Demographics, certainly. PCs and Macs do PPP out of the box,
and for most providers, that's all they need to know. I think
the average ISP sees no profit, just complications, in offering
SLIP or even shell accounts. If you don't have that problem yet
in the U.S., I think it's only a matter of time.

FWIW, when I shopped for an ISP in Montreal last spring, I found
that the most flexible in that respect was Communications
Accessibles Montreal (CAM). They gave me a static IP #, PPP, and
a dialup shell account, no extra charge. Last time I checked,
they also offered SLIP.

>partition AFAIK. Is that what you're saying the Harlekin FS can do?

Not quite the same thing I think. The Harlekin selector has ten (IIRC)
slots for preset paths. You can set all or some to permanent presets,
and then as you use it it remembers the last few (ie 10 minus the
number of permanent presets you've set) paths you've accessed. For
each new path it deletes the oldest one. To go back to a file or
directory you just click on the path in a pop-up. Really handy for
appending extracts from Oasis to one file, for example, and there is
no key-pressing or mouse-clicking involved in order to get it to
remember.

That said, it isn't so wonderful that it's worth losing all that
memory to have it! Plus it probably would have trouble with MagiC
(especially as my copy of Harlekin was a non-upgradeable version 2
HiSoft were selling off cheap one Xmas).

Cheers
John

:
: I'm getting lots of "Runtime error 204 at Offset $00063AC8" errors
: (or slightly different offset). Any ideas?

Sounds to me like you are close enough to the finish line for some rejoicing. For the runtime errors, I would recommend that you try to get the altest version of all of the programs, a lot of Runtime Error problems from the WWW133 package have been worked out in the last several months. Vistit Flinny's STiK page in the UK, or the YAC site it the US (http://www.dcn.davis.ca.us/vme/yac/) to get the latest versions of the programs.

Protect your DIAL.SCR and DEFAULT.CFG files though,it sounds like you've got them where they need to be and you won't want to have to mess with them again.

Among other things, the new version of CAB will completely revamp your cache folder, so it will probably take care of that problem.

m> Fantastic issue! lots of good info, and a real nice cover!
m> (btw, who did the cover?)

Hallvard will remind me if I'm wrong, but I believe the file on Bombs and TOS errors on his site includes some information taken with permission from Mark Baines' A-Z book about GEMDOS and BIOS errors too. It was Mark that wrote the piece in Atari Computing.

Wrt the cover, it's by Hoagy (aka David Stevenson) who appears in this newsgroup as djs@jet.co.uk - good stuff as usual.

IIRC the number of bombs is cumulative. If two errors occur you'll get the
total number of bombs associated with each type. I think that's why bombs
appear and then increase in number moments afterward.

BICBW...

] : Pagestream.
]
] I am not sure I understand this. What print driver would I use to print
] to disk?
]

Hi John,

All of the Pagestream printer drivers can send output to a disk file. If you look in the 'global' menu then 'configure printer' you will see a box to load the printer driver and also an option to send the output to a printer or a disk file. Select disk and when you print, the file selector will be called to you can name the output file.

The disk file will be in whatever format is produced by the print driver (IMG, postscript, PCL etc)

Let me know how you get on...

Yep, me too - horses fer courses... I have had a number of flirtations with
Calamus and I just can't learn to love it. There are a few missing things in
Pagestream (right and decimal tabstops are a big gap), but for me there is no
substitute, I have been using it ever since the old Publishing Partner days.

BTW, if you are using PS fonts, make sure you generate the bitmap font files,
they speed up the screen redraw very considerably. Try 12pt, 18pt and 24pt to
start...

In <58ot6v$1v6@columbia.acc.brad.ac.uk> wrote :

>a) Papyrus, 4meg ram, NVDI-3 Colour

Since you want a "WP" style system, this would probably be the best choice.
It's like a word processor, but you can also add pictures, boxes etc. like
a DTP program.

BTW, NVDI is now up to version 4.11.

For what you are wanting, I think this is by far the best choice.

>b) Calamus 1.09n Cheaper but black and white
>c) Calamus latest version. Cost?

Calamus is DTP, not WP. It's one of the best DTP programs on any platform,
but it's not really much good for WP. If you want a word processor of any
sort, Calamus is not it. I recommend Papyrus.

>d) falcon with...

You can use Calamus SL or Papyrus on the Falcon - the only difference you
will see between this and your ST for WP/DTP is the speed and the colours.

>These may be 'wrong' or 'silly' please ammend/update. Has anyone got a
>setup they recommend, where everything seems to work without clashes?

Overall, for what you are wanting, I would recommend Papyrus.

>"The Poor Deluded Soul" tderrick@acpu.com

Systems For Tomorrow is in the Kansas City area - not Joplin. It is
chro_MAGIC Software Innovations that is in Joplin.

Here is a list of Missouri based companies that support Atari/TOS
systems:

chro_MAGIC Software
516 North Jackson
Joplin, MO 64801-2755
Phone: +1-417-623-7393
Fax: +1-417-624-0700

Systems For Tomorrow
11006 East Winner Road
Independence, MO 64055
Phone: +1-816-833-4738
Fax: +1-816-252-3611

All Relative
2233 Keeven Lane
Florissant, MO 63031
Phone: +1-314-831-9482

The Crawly Crypt Corporation
PO Box 23
Webb City, MO 64870-0023
BBS: +1-417-624-1887

I believe that the new GEMvelope devloper is also based in
Missouri (Brisk Software) but I don't have any contact info
available.

4907. Cyber Studio to 3d studio

Newsgroup: comp.sys.atari.st
Date: 1996-12-15 00:00:00 UTC
From: ad910@lafn.org
Message-ID: <1996Dec15.115217.8237@lafn.org>
Source record: 131793

Are there any cross platform graphics gurus out there?

I did work with cyber studio's cad3d/sculpt/texture/etc., but haven't
been doing it for a while.

Now, I'm back in the graphics business...but this time with 3d studio max.
(Yeah, I know... PC?! Ptui!! Well, at least it STARTED out on the Atari
and is still authored by Tom Hudson!)

I've got a TON of .3d2 files I'd like to convert for use in either
3d studio v.4 and/or(preferably) in 3d studio max.

Does anyone know how or if I can the cyber objects to their pc counterparts?

FYI: So far, 3d studio looks like the big brother to the cyber system in
both program design setup and method of use. Max, on the other hand, looks
like a complete revamping of the file structures and auxillary programs
(plugins) while retaining the basic look and feel of 3d studio v4 and the
cyber series, uh, well sort of. The closest I can come to a comparable
comparison is windows95 to previous windows versions...they kind of look
the same but they ain't.

I've got the developers disk, so I know the file structures for the cyber
files; I suspect that the 3d studio files are similar in nature (except
for more bytes for color, # of vertices, faces, etc.), but NOONE seems to
know what the structure is for 3d studio max- unless the info's in the
hugely expensive max development kit.

So, instead of trying to reinvent the wheel, I reitterate, "Does
anyone know of a conversion program that I can use to bring my chairs and
tables and other object files from cyber .3d2 so that they can be used
in either 3d studio or 3d studio max?"

Help! I hate to lose all this stuff and have to start with an empty
library again!

Thanks,

Bob

4908. looking for Atari TT in UK

Newsgroup: comp.sys.atari.st
Date: 1996-12-15 00:00:00 UTC
From: J.B.W.Webber@ukc.ac.uk
Message-ID: <1784@kiwi.ukc.ac.uk>

Yes. This was one of the best ST arcade shooters! It was done by
Rainbird backin '88 and had awesome graphics. I used to have a copy but
lost it when I sold my STe some time ago.

You might be able to locate a copy from an ST dealer for a bargin price.
Try Toad Computers...

: >that attaches to the print head of a dot matrix printer and software. It

The program that comes with IMG Scan tells me that it will scan at 1000 lines per inch. However, the best resolution that I can get is about 75 dpi. I examined the fiber optic cables themselves and found they are a fairly large diameter. I am thinking that all I have to do is reduce the size of the opening that the "receive" cable can "look" through down to a 1000 dpi opening and this will improve the resolution greatly. I shouldn't have to mess with the ruby lazer "projection cable at all as the light source diameter shouldn't matter. It is a pretty nice program and is a good use for my old Panasonic KX-P 1124 printer and ST. Any thoughts on how I might accomplish this?

Source record: 131806

Be very carefull with with IMG scan! You have to remember that it is going
to print a dot at each end of the scan line, and the only thing that
lubricates the pins in the printhead of a 24-pin printer is the ink in the
ribbon! You won't be using a printer ribbon while scanning! I burned up a
print head in my Epson LQ-800 this way! It will usually cost half the
price of the printer to replace the print head!!! It is cheaper to buy a
hand scanner and software than to replace a print head! This is especially
likely to happen at the higher scan rates!

Err. No it still doesn't work!! Is this a CAB thing or something at your
end?

I haven't tried ftp ('cos I'm a lazy git and would hope that the www address
would work)!! It's so much easier using XURL and going into CAB. I just
can't be arsed to write/print that ftp address and then rekey it into
mg-ftp. (I only use NOS on odd occasions).

But I would like to know if it's YOUR problem or CAB's? If it's CAB's then
we should report it to Alexander!!

Has anyone manages to download this from the www address?

I'm not knocking the support that you're giving the Atari community. A
supported version of NOS is GREAT news. (It's just getting hold of damn
thing <grin> )
```

Hi, Speedoflight3.8 will do it no problem. As well Image copy4.
Both are english.
Image copy is commercial. but very very cool and powerfull, it handles
a lot of format. Tif, Jpeg, iff, GIF, BMP, Image, TGA etc etc...
This software allows you to make interlaced gif and transparent.
A printer output is also possible, lot of printer are supported, and
the quality is very very nice.
Well see you later..
Bye

JdB>
JdB> Ported them. Don't know what you mean by `unedited files'. Get the
JdB> programs and test them, is what I would recommend.

I mean files where you don't have to edit out extraneous stuff at the beginning or between split files.

The newer versions apparently require MINT, and thus, aren't of any use to me. I did find an older version that works without MINT, but it requires you to 'clean up' your files first, making it no better than ESSCODE. Also, it didn't like receiving the path on the command line, making it less than desirable as an installed application.

As far as I know, the STiK logging doesn't exist/work anymore. There is a
new package called LogSTiK that is installable, and displays all the
STiK calls and responses.

It is available on Flinny's STiK Stuff web page. (Don't have the URL)

On 15 Dec 96, Duane O'Donnell was hired by Jack Tramiel for saying:

DO> ESSCODE works well on MIME encoede files.

It does, but doesn't work from a command line (though it's supposed to), and you have to clean up the file(s) first. Jos den Bekker's UUENDE works from a command line and doesn't require you to clean up the file(s) first. I was hoping there was a MIME program that worked the same way, since I don't need a UUencode program.

I have one for the Mega Atari ST with an adapter-cartidge (in the
cartridge-port of course.
There is software delivered with it. (Touch-up ?) If even used the scanner
to recognize text.
With a recognition program mad by a German.
My scanner is a Golden Image scanner and I it once by a Logitec Scanman.
Works. No difference as far as I can see.

<SNIP>

You can't scan at any finer rez than the printer is capable of moving the
head. Thus, a really expensive printer that can actually do 1000 dpi would
allow that level of scanning. A cheap printer that can't do any better than
60 dpi will leave you with nothing better than 60 dpi scans.

Nos does something untoward. If it does not crash on me immediately in
vt52 then it will have set a time bomb ticking. If it doesnt crash
when I quit it, it *will* at some random point thereafter. It behaves
perfectly when run singletasking as nos.prg

>anything).

Just hit a key which represents a drive letter. If there is enough space free on the drive you selected the whole of memory will be written out to the root directory thereof. Reboot then drop the daft named file onto memaxmn. If you are prepared to wade through it (I'd hate to have 14 megs here - 4 is bad enough!) then it can invariably tell you which program leaked and stuffed the system.

>The recover option fails 3 out of 5 times too. Although
>that is better than Magic4. Magic4 NEVER recovered in this situation!

You should always reboot after this occurs. The implication in the MagiC 2 manual is that the only purpose for recovery (apart from the memory dump) is to provide an opportunity for you to save data which would otherwise be lost.

>
>Anyone know what 11 bombs mean? I get that occasionally. I'm using AntiBomb,
>but it doesn't catch it.

Theoretically it should be a LineF error but this cannot realistically
happen.

Unused vectors point to a routine which displays bombs and it looks
like the high byte of each vector determines the number of bombs which
gets displayed, on an ST at least. So one of two things has ocurred:
either something has interfered with one of these "high bytes" and
written "11" there or (and most likely) there were multiple crashes
during the attempted recovery (ie the bomb position "counter" never
got reset) producing a total of 11 bombs. The processor would probably
carry on crashing indefinately except it will usually halt itself when
it gets into a real mess. iirc one of these circumstances is if it
gets a bus error while it is processing a bus error.

Someone probably knows better but that's my two pence worth! :-)

>No, it is a 2.5 inch standard IDE connection.

Bruce, the conector is not the "support." The only difference that matters
between IDE and EIDE is the size ofhard drive supported; Messy-DOS can't
handle more than 1024 cylinders (or is it 1024 sectors/track? Whatever.) and
so you need to either fool DOS into thinking it has the "proper" settings,
or use a BIOS extension that provides EIDE support directly. Since the
Falcon doesn't use MS-DOS, this limitation does not apply.

Bottom line: There should be no problem using EIDE drives with the Falcon's
IDE controller. Connecting a 3.5-inch drive will require a cable adapter,
that's all.

Theo (And anyone else who's unhappy with the service you got from Toad), I recommend sending email to jennifer@toad.net giving the details - including who you dealt with. Dave and Jennifer have been big supporters of Atari users for many years - don't let some new (and sloppy) employees sour you on them.

Hi

What do you guys put in your apps folder etc my version of magic 5 runs fine
on the TT I just use set up the way it installs and a few Apps. I run
the auto folder as normal.

There are many CPX's which cause problems also xcontrol is a bit bug
ridden.
Most of the system stuff used in the pre magic set ups is not needed
magic patches all of these. The bconmap prg could be a suspect on the
falcon.

hey,

what's up on Atari ST/ Falcon Platform ? thought it was dead ?

I used to have those great machine few years ago, one ST and one STe
(though I still have them in my cupboard somewhere !! ;-)) .

What's the latest about it ? Is ATARI still selling PC (understand
Personal Computer !) or gone bankrupt ?

What's the power of the new Falcon now ?

Any software still released ?

... haaa, 'was the good old times for me.

let me know to

BED@EUROPAY.COM

cheers

The only thing I can suggest is to look for those old British ST mags with STOS on the coverdisks. Other than that...it's a shame they're not putting out on the Internet for free downloading. Would be cool to also package Missing Link extension since it's the only way to make a decent game out of STOS :)

Rich Tietjens (atari@teleport.com.REMOVE.TO.REPLY) wrote:
: You can't scan at any finer rez than the printer is capable of moving the
: head. Thus, a really expensive printer that can actually do 1000 dpi would
: allow that level of scanning. A cheap printer that can't do any better than
: 60 dpi will leave you with nothing better than 60 dpi scans.

Horizontal resolution could go as high as the optics, hardware and software were capable of doing. Very much higher than 1000 dpi (which is what IMG scan is capable).

Vertical resolutions are a different matter as you point out. I check my manuals and IMG scan list vertical resolutions of 144dpi, 216dpi, or 360dpi depending on the printer. The KX-1124 that I use is capable of 360 dpi.

The best "real life" resolution that I could get would be 360 x 360. But, I don't even get that as I think the receive optics are is picking bleed and ends up averaging data. I still think I just need to reduce the receive area. (I think!)

The Swamp Dog Uncoder (SDUU) on the Swamp Dog WWW site and in Hensa
works really well. It takes the coded file, garbage & all, and sorts
out the program. It DOES NOT require MINT.

Duane O'D.

4959. Re: UUcoders (was Re: ST stuff FS, best offer.)

Date: 1996-12-16 00:00:00 UTC
From: Terry.May@rebel.genesplicer.org
Message-ID: <48f_9612161738@genesplicer.org>
Source record: 131695

On 16 Dec 96, Jos den Bekker was hired by Jack Tramiel for saying:

JdB> Pray, what are `unedited files'?

As I said previously, that's files that have extraneous text before the encoded text or between split files.

JdB> That is only true for munpack 1.2. But you should use option -C if
JdB> you want to indicate a directory. Still, the command line handling is
JdB> incomplete in version 1.2. It's fixed in version 1.5

V1.2 is the only version I found that was not described as requiring MINT. Since I don't use MINT, I didn't get any of the later versions.

* LED v1.50 * For a good time call 702/736-2282!

4960. HD re-partitioning - Please help!

Newsgroup: comp.sys.atari.st
Date: 1996-12-16 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <594erd$7oc@alpine.psnw.com>
Source record: 131696

Hi there!

I have a C-Lab Falcon MK-X, with a 540Mb SCSI Hard Disk, and when I got it it came partitioned into 4 fairly equal partitions. That was fine, I thought, and used it as is. But now that I'm getting more and more into Direct-to-Disk recording with Cubase Audio, I find that I am greatly in need of more space in my Audio partition, while there is more than enough space (as much as 120 Mb in some cases) to spare in other partitions. My question is, is it possible to take that extra unused space from those partitions and put them into my Audio partitions? Can this be done without having to back-up EVERYTHING on the whole HD and then re-install it after I re-partition it? How do I do this? Any info would be greatly appreciated, since I am going to be doing some fairly intense recording work soon (in the next couple weeks). Any info you give me should be fairly straight-forward and easy to understand, since I don't have a whole lot of experience with this kind of stuff! Thanks!

daymon@psnw.com

4961. What's a fair price?

Newsgroup: comp.sys.atari.st
Date: 1996-12-16 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <594gdk$7oc@alpine.psnw.com>
Source record: 131697

Hello!

I'm thinking about selling some of my old computer stuff, and
would like to know what a fair price to ask would be. Here's what I have
to get rid of:

My ST system: (Bought 1988-90)
Atari 1040STf - stock, 1 Mb, 720K Internal Floppy drive
Atari SC1224 - Color monitor
Atari SF354 - 360K external Floppy Drive
Epson Spectrum LX-80 - Dot Matrix printer

My 8-Bit system: (Bought 1983-86)
Atari 1200XL - 64K old friend
Atari 1050 - Single-Sided 5-1/4" Floppy drive w/ US Doubler
installed for twice the storage capacity and 3x the speed
of the original drive.
Atari 1020 - Color plotter.
Covox Voice Master - Sound digitizer, voice recognition, some
music functions as well. Pretty cool for its time!
Okidata Okimate 10 - Color thermal printer - has some problems.
The print head gets stuck sometimes.

I have quite a bit of software for both systems - Games, music stuff,
other applications.

Now I have a C-Lab Falcon MK-X, and I don't really have much interest
in using my old stuff anymore, and I also have a need to get at least
some money out of this. Does anyone have any idea what these things should
go for? I would like to get the highest barely-sell-able estimate, and
then be able to ask for that or the best offer. Also, if anyone would like
to buy these things and offers a price that sounds reasonable, e-mail me
and we can discuss it. I've tested everything, and it all seems to be in
great condition, other than the Okimate printer, so we're not talking
about stuff that's been abused and is on its last leg. So let me know
either here in the newsgroup or my e-mail! Thanks!

Mike Freeman

> Or an External program that will also allow me to do this?

You can probably do it in the Outline Art module (_not_ the vector module, there was a separate module with most of Outline Art's functionality, I seem to remember...)

> I was thinking maybe Outline ART might be able to do this?

Yes

> Or maybe even DA's Layout/Vector?

Yes

If you want to save the resultant vector back into a GFN font you'll need a font editor. Didot/DA's Layout can do this, along with Avant Vector, and probably a few other things too, although Outline Art won't save CFN font files, only vector graphics.

But why do you want to save it back to a font though? - you get just the same functionality by saving a vector graphic. Still, it is possible to do what you want.

Indeed :-) It also gives a lot of good experience with technical matters which most Mac-owners don't have a clue about.

Anyway, it is indeed possible to use a digital camera on an Atari, it's a ROM-port interface made by a german company.

So again Mr. Petey ButtClair has shown his real in-depth knowledge about computers and esspecially Atari-computers :-)

Keep Cool and Flying...

> I am looking for a Falcon,
>
> Preferably from Europe, but please no german TOS !

The Falcon TOS is multilingual, it has both UK, US, GERMAN, SWISS and FRENCH languages and keyboard layouts, all you have to do is to chance the NVRAM settings and re-boot.

Keep Cool and Flying...

> FORMATTED on the PC first. Bad thing to learn just now.

Just to clarify this, though it won't help you: Formatting a SCSI disk
will always have the same result, regardless if formatting is done on
Atari, PC, Mac etc. On this level there is no incompatibility because
the drive itself does the formatting with its builtin firmware.
The difference between these platforms is the filesystem layout. The
filesystem is created when partitioning the drive. (On the PC
partitioning is the combination of 'fdisk' and the DOS command 'format'
which doesn't actually format the drive but only initializes a
partition.)
So if you format a SCSI disk with a PC or Mac you are able to partition
it with the Atari without having to reformat it.

Yet another seriously disturbed person....
If he *really* thought the ST was crap he wouldn't even bother wasting time
on a posting such as this.
He's probably seen a friend's ST and all the things he can do which can't
be done on a PC- like get things done! ;-)

>good time to use them come in handy? (examples)

On an ST you can only use 6 ACCessories at the most. The 'Xcontrol.ACC'
takes up one ACC 'slot' yet lets you load/unload several different 'CPX
modules' at any time (no need to reboot like with ACCs).

Your Xcontrol.ACC can be set up with several .CPX modules at once, so you
can quickly access different functions and "accessories".
CPX modules and the Xcontrol panel was made with TOS 2 and up in mind
(the Mega STE came with TOS 2.06, but any ST/STF/STFM/STE can be upgraded
to TOS 2.06).
I've heard that it's not guaranteed to work under older TOS versions, but
postings in this newsgroup indicate that a lot of people have successfully
used it without having TOS 2.06 or higher.

As a lot of CPX modules are loaded/unloaded as accessed (this only takes a
fraction of a second) it's not advisable to use the Xcontrol.ACC/.CPX
modules with just a harddisk (I did use it before I got a harddisk, but it
was a pain to use).

It's excellent with a harddisk though and I use it all the time!!

If you want to try it out you might want to download the Xcontrol panel and
the control panel CPX modules (these all replace the 'old' control panel
ACCessory):

ftp://ftp.sn.no/user/hallvart/atari/cpx/xcontrol.zip (98 Kbytes)

Contains: UK/USA (the eXtensible control panel) for CPX modules
color.cpx : desktop colour
config.cpx : configure CPX modules
general.cpx: keyclick/repeat/bell/double click etc.
maccel.cpx : configure mouse accelerator (use with 'maccel.prg')
modem.cpx : modem setup
printer.cpx: printer setup
sound.cpx : sound level, bass, treble etc.
wcolors.cpx: window colours (not the same as 'wincolor.zip')

I also have a lot of other CPX modules in the same directory.
Have a look at the '00_cpx.txt' file for information about them.

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

HOW TO GET FILES VIA FTP

Below follows a step-by-step guide on how to get hold of files via FTP.
Your specific version of the FTP program might differ slightly (it might
have extra functions and be more user friendly etc.) But the main procedure
is likely to be more or less the same.

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
======================================

What to type What it does
----
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
----
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
----

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
----
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
----

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
----
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

___

```
150 Opening BINARY mode data connection for silkmous.zip (22086 bytes).
##################################################
226 Transfer complete.
mget snip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for snip.zip (17852 bytes).
##################################################
226 Transfer complete.
ftp>
---------------------------------------
```

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

```
Example:
---------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
##################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
##################################################
226 Transfer complete.
ftp>
---------------------------------------
```

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which
start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single
command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this
file or not, you can use the command 'prompt'. FTP will then proceed to get all
the files that match your wildcard without asking if you want them.

```
Example:
---------------------------------------
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
---------------------------------------
```

___

```
! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode

trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

Hear yea Hear yea, following Atari goods for sale....

SC1224's - 'refurbished' w/ original box & doc's...$65.
- 'used' tested, good working order, good brightness,color
& contrast...$50.
PCM124 - 12" 9-pin Atari PC Monitor-'new' w/originalbox/docs
color/mono monitor, ask for details...$65.

Calamus SL with extra plug-ins(modules) original software & manuals, ask
for
details...$175.

Aerochopper R/C Flight Simulator w/ Futaba R/C Transmitter contoller,
software in original box with owners manual...simulates flying r/c planes
and helicopters..$125.

Jaguar with CD Player includes all 'pack-in' software as sold by Atari.
Original box and doc's PLUS extra controller, Raiden Cartridge, BrainDead
13 CD, Highlander CD
All for $175.

Golden Image Cordless Trackball- new- $15

AlberTT v1.2 Video Card for MEGA STE or TT. Dover Research Corp 1991
w/9pin to 15 pin cable + plus software...$125.
Here's more info on the AlberTT- 1024x768, 16 colors from palette of
4096.
Makes hi-res look like ST low res, just with a huge window.

Buyer pays shipping. Payment made by check/money order or COD.
Ship from New York, USA. /Danny/

> > PS - have floppy drives in need of repair, around 10, if anyone wants
them to fix, let me know. [720K from 1040 STf's]. Also have 1040STf's that
need power supply & floppy drive, also may need TOS chip in location U7,
includes good keyboard, case and mothewr board, ask if you are interested
in these. -DF

4981. SIMPLE CONCEPT FOR EXTRA MONEY

Newsgroup: comp.sys.atari.st
Date: 1996-12-16 00:00:00 UTC
From: MR.MORGAN@worldnet.att.net
Message-ID: <32B565B6.2725@worldnet.att.net>
Source record: 131726

Hello$

Would you like to make thousands of dollars, quickly, legally, with NO CATCH? then keep reading....please take two minutes to read this article - it can change your life, just like it changed mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time. Here we go.
A little while back, I was browsing through these newsgroups, just like you are now, and came acress an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5! So, I thousght, "Yeah, right, must be a scam", but I was curious, like most of us, so I kept reading.
Anyway, it said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it! So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right?
This is from someone who has tryed it and it worked like a charm.
I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought.
But then the money kept comin IN. tripling in size and multiplying by 10 - 20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!! In the third week, I had

over $10,000 dollars, and it's still growing! This is my fourth week (Nov 29) and I've made about $42,000 TOTAL, and believe it or not the money is still coming in.... Let me tell you how this works and most importantly, WHY it works.... also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money.

The process is very simple, and it consists of 3 easy steps:

STEP 1: Get 5 sepearte pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 4."

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH having a piece of paper AND the $1 bill inside.

NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. Mark Guerra

3811 Garden Lake Dr.

Kingwood, TX 77339

2.Gillian Taverns

1109 Southwest Parkway #1305

College Station, TX 77840

3. Sarah Simmons

P.O. Box 120

College Station, TX 77841

4. John McRackin

P.O. Box 7548

College Station, TX 77844

5. Bryan

1350 Greens Pkwy #911

Houston, TX 77067

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becomin 3, etc.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (there are around 18,000 of them!). All you need is say at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1)Click on any news group like normal, THEN click on 'TO NEWS", which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2)Leave the newsgroup box as it is, but CHANGE the subject box to something eye-catching, like, 'NEED CASH$$$ READ HERE" or "FAST CASH"!!!

3)Tab once and you should be ready to type or copy and paste the article from a text program. Now, retype (only once) or copy and past (ctrl - c to copy + ctrl-v to paste each time) THIS WHOLE ARTICLE, word for word, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same.

4)When you're done typing the WHOLE article, click on FILE in THIS BOX, right above send, NOT where it says netscape news on the first box. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU HAVE SAVED IT. Once saved, move on to number 5 below.

5)If you still have all of your text, send or post to this newsgroup now by simply clicking Send, which is right below FILE, and right above the Cc: button.

6)Here's where you're going to post all 200. OK, click on any news group then click on "TO NEWS', again (in the top left hand corner of your netscape navigator. Leave the newsgroups box alone again, put your eye-catching title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENT, which is below the Subject box. You will get another box to come up. Click on ATTACH FILE, then find YOUR FILE THAT YOU HAVE SAVED; click once on this file, and then click OPEN. Now click on OK. If you did this right, you should see your file name in the attachments box, and it will be shaded green. IF YOU USE I.E. EXPLORER, IT'S JUST AS EASY: Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same time, to copy this article. Then print this article for your records to have the names of those you will be sending $1 bills to. Next, go to the newsgroups and press "POST AN ARTICLE".
A window will open. Type in your headline in the subject area and then click in the large window below. If you want to edit the article, do so and then highlight and copy it again. Now everytime you post the article in a new newgroup all you have to repeat is "CTRL and "V" and press POST.
7)That's it! Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups. You see? Now you just have 199 to go! (Don't worry, each one takes about 30 seconds, once you get used to it). REMEMBER, 200 IS THE MINIMUM. The more your post, the more money you will make. AND THAT'S IT!!! You are now in the mail-order business and will start receiving your $1 envelopes from various people all over the world, within days! HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually, because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses that you have typed in for the 4 people plus yourself are

correct, please. LET ME TELL YOU WHY THIS SYSTEM WORKS! Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made $5 dollars with my name at #5. Now, each person who just sent me $1 dollar makes, say 200 postings, now with name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 dollar now - that's $50 dollars you have made! Next, your new 50 agents each post 200 newsgroups with your name at number 3, or 10,000 POSTINGS (50 X 200 = 10,000). The average returns at $1 dollar each, or $500 dollars. They in turn make 200 postings, which is 5,000 returns at $1 dollar each, which is $5,000 dollars! And finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 DOLLARS BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE ONLY MAKES 200 POSTINGS, AND IF ONLY 5 PEOPLE RESPOND!!! When your name is no longer on the list, you simply take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 DOLLARS TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN. And start posting again. The thing to remember is, THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY - just like you are now!!! So can you afford $5 dollars to see if it really works? I think so.. People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE whos are joining the internet and newsgroups every day and are willing to give it a try? Estimates are at 20,000 to 50,000 new users every day, with THOUSANDS of those actually joining the internet. Remember, PLAY FAIRLY, AND HONESTLY, and this WILL WORK. I promise you!! You just have to be honest. Make sure you print this article out RIGHT NOW. Also, try to keep a list of everyone that sends you money and

always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER: HONESTY IS THE BEST POLICY! you don't need to cheat the idea to make money. GOOD LUCK TO ALL, PLEASE PLAY FAIRLY, AND YOU WILL REAP THE HUGE REWARDS FROM THIS - TONS OF EXTRA CASH!!! One last note: if you try to decieve people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much in return. Someone I talked to knew someone who did that and she only made $150 dollars, and that's after eight weeks! Then she sent the 5 $1 dollar bills, people added her to their lists, and in 4-5 weeks she had over $10,000 dollars!!! THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING US

I also need some help with ghostscript or GSVIEW.I am trying to view a
file on my screen with a .ps extension.The file is 1.6meg in size,and I
can't get it to work.
I have a 1040STF with 4megs of ram,Tos 1.0
Would anyone have any suggestions how I would go about viewing this?Thanks!

Eh.... I don't think many people in this group understand Norwegian!
Fortunately I'm from the same country so.... this is what he says:

For sale:

520STM (upgraded to a 1040) 1 Mbyte RAM, TOS 1.4
2 disk-drives (720K), 2 joysticks, TV-connector cable, 1 mouse
2 disk-boxes full with games/programs
I've also got a defective monochrome monitor which can be used for surplus
(the picture tube is defective).
We can probably agree on a price, or do an exchange in PC parts.
You can get hold of me by phone on: [+47] 66960995 or
Email: periksta@online.no

td> access the fpu in my CaTTamaraned TT. The bomb list says 'Line 11
td> emulator', whatever that means. I now suspect, because of the above,
td> that my fpu is non-operational. Anybody have any ideas?

Have you a copy of Ofir Gals gembench, that will do an FPU test, and also
there's another archive called FPUCH144 and also FPU_TEST these will test the
FPU, It may just be that the particular porg your using is trying an illegal
instruction for the FPU you have.

a> Has anyone else had problems with Umich files, especially the file
a> 38400bps.lzh?

The problem with LZH files is that your extracting programs are way out of
date. You need the LHA310.TOS archive to get a far more powerful and
universally utility to unpack all LZh files.

With ZOO files I've come across this problem often, ecven when using the
latest unpacker and identical parameters to other people. I don't honestly
know a fix (if one is needed). If I see a ZOO file I just ignore it now r
get someone else to unpack it for me...

Hi,

I think it really depends on waht you would like to do with the
machine. I have two Ataris' including a 1040Ste, and I use my
machines for everything from Word Processing and Midi Recording,
to Direct to Disk recording (which you can do on an ordinary ST)
and Speech Recognition.

It also depends on your set-up.

Yours,

Ben Hills.

I don't know of any source on New TT's as I tried looking myself
a while ago. You could try flicking through a copy of Micro Mart,
you will find the odd TT machine selling for around ï¿½500. Or you
could investigate the new Atari clones, such as the Direct TT.

Yours,

Ben Hills.

You must start the Magic PC demo and save the GEMSYS folder that is inside
the Magic PC C drive. Then you have to copy this folder to the root
directory of the windows C: drive

Travis,
An error I made early on in my FTP experiences, was that many
FTP servers default to ASCII mode rather than Binary mode transfers.
Get into a habit of typeing the command "binary" once you log into
an FTP site. This should ensure that files are sent in Binary rather
than ASCII. This is "most likely" your problem.

Brian

=======
=======

Well, Bob, you may be in luck.

I just happened to at one time work for ATARI in the Developer Relations section under Charles Cherry. What I have is a very exclusive version of a file conveerter from 3d2 to dxf ...

I now use this to transfer CyberSculpt .3D2 creations to TRUESPACE. The .DXF format is the raw datatype for the early 3D Studio stuff and should still be compatable. All you can take across is the basic single object, however. In other words, if you have an object - say, a chair - that is made up of ten components, you must either convert each of the ten components or unify the chair into a single object - ie, glue it all together.

This program also only runs on the ATARI. Nobody has as yet seen fit to write a converter for the PC (snobs, I guess!). So, if you still have an ATARI and want this tool, let me know. I'll dig it out!

Source record: 131747

Try to find a SLIP connection these days! They are fewer than Hen's
Teeth! And when you do find one, you pay thru the shute!

Why is it so difficult to write a PPP connection for the ATARI. Does
nobody have the no-how or inclination to write a clean browser that will
run on everything back to TOS 1.04 that is at least as decent as
NETSCAPE on the PC?

Source record: 131748

->: Just a note of appreciation to all the programmers of CAB/STiK and the
->: beta testers of same. Alex Clauss, Dan Ackerman, Flinny, Swapdog, and the
->: many others who have promoted CAB/STiK. Imagine the daunting task of
->: writing a browser these days to compete with Netscape or IE who have
->: hundreds of programmers coding away to compete and promote their product...

My sentiments exactly, although I have yet to email them myself.

->I would love to take part in this revelry, HOWEVER STiK or CAB or both
->don't work ! I have everything in place, I considered all the
->possibilities I know, my STiK logs in gets the IP and my ISP even says it
->responds to packets, CAB reads pages OFFLINE just fne, but on line I put
->in an address or try one of the given sites, not just any address, but
->ones I know work right now on any other kind of computer, and it resolves
->the host connects and dowloads "zero bytes (0) [reading 0 bytes]

Same here, but I get a different error message from CAB. STiK seems to work
fine on my Falcon, and Newsie works too, but CAB/STiK no.

->[Recieved 0/1284 bytes] and stays there. Is it the CAB.OVL? I am not
->helpless I configure MACS, and PC'S in '95 and NT even 3.11 (WINDOWS
->versions) with Winsock, Netscape even the Godforsaken MS Explorer works.

I've helped PC owners get more out of the Internet than I can get with my
Falcon. But I'm not that familiar with PC stuff, much less MAC stuff.

->I'll praise the authors when their package actually works! I hate coming
->home to my Atari because I refuse to buy another computer because my
->Atari has always been able to do whatever I need it to EXCEPT web browse.

Keep in mind when you are running ver 0.xx of something that didn't cost you
anything, don't whine about it. If you make your living on the Inet go buy
a PC. I always like coming home to my Atari! :-)

->I would gladly buy a Web Browser for my Atari
->that worked,and was atleast trying to be up to date. My computer is

Me too! Where?

Hmm... thats interesting... maybe it is a colour mode thing? I'm running in 640x480x16, or 896x600x16 (depending on how I start XaAES)

>: Yea, it is getting more stable, but it still has a way to go before I would

Hmm... thats odd... works fine for me (GEM=c:\multitos\oaesis.prg -physical)

>have try try to get Geneva running with MiNT as well.

I've tried the Geneva demo... nice, but it doesn't use the now 'standard' methods of bottomming/fulling a window, and refused to go to any other mode than 640x480 mono on my Falcon [when started from MiNT.CNF]

>so I've assumed that MINT is not worth pursuing just for the internet connections. Is this
>correct?

well, MiNT itself will run on a 1mb machine - I've used MiNT with AES 4.1 on my
1mb STfm [briefly]. For MiNT-net and apps you probably will need more memory,
but it certainly should be do-able with 2.5mb. (however, one of the main
advantages of MiNT/MiNT-net is the ability to multitask your internet apps
- eg. read mail and IRC at the same time - this might not be possible when
low on RAM)

Higher figures (4mb) are usually for if you intend to do stuff like use GCC
(very memory hungry) or X-windows (8mb+)...

Sure, but there is a reason for this. The realy nice thing with oAESis is that
it never locks the computer. Even when you use the menu the other programs can still
update their windows. True multitasking you know. :-)

5011. Megafile 30?

Newsgroup: comp.sys.atari.st
Date: 1996-12-16 00:00:00 UTC
From: RCain@nest.demon.co.uk
Message-ID: <633_RCain@nest.demon.co.uk>
Source record: 131756

Hi micha122@ix.netcom.com, on 15 Dec 96 you wrote:

m> Can somebody here please tell me what an Atari Megafile 30 is?

It's a proprietory hard disc box. 30Mb won't get you far nowadays.

m> Also, is an Atari 1040 ST expandable?

Of course! What do you want to expand it to?

The most popular expansion is to RAM. A Marpet board will allow you to get to 4Mb.

Next you could go for an o/s expansion i.e. to Magic v2. Makes more sense than buying replacement TOS chips.

At this stage you will be wanting a hard disc. Just get a host adapter (Link or adSCSI) which plugs into DMA and get a modern SCSI HD of 540Mb->1Mb.

You obviously have a modem - upgrade this to 28k8 and use HSMODEM.

Hmm .. there's no point in going further - it depends on what you want to do with your 1040.

Hi dooley@infomatch.com, on 15 Dec 96 you wrote:

d> I keep running across X-control and CPX modules and have never used
d> them!

Don't load XControl if you don't use the CPX. Why are you doing this?

d> My only understanding of them are that there are sort of an
d> accessory.. Is this true? How are they used? Where are they used? and
d> when would a good time to use them come in handy? (examples)

True. The basic TOS only allows 6 accesories which some people find limiting.
X/ZControl and Freedom2 allow use of any number of CPX which are not loaded
unless required and can be called on-the-fly.

If you have a multi-tasking system then CPX and ACC are not important apart
from the cases that they do something unique which is not available through
some other application.

If you are single tasking they give you the opportunity of task-switching to
do a job without taking down the running application.

Quite honestly, I don't use them myself. If you are using applications which
require ACC/CPX as a supplement you should most likely be thinking of
changing the application.

5015. NOS 0.45 ready!

Newsgroup: comp.sys.atari.st
Date: 1996-12-16 00:00:00 UTC
From: mike@bbsgate.interware.it
Message-ID: <1326_mike@bbsgate.interware.it>
Source record: 131760

```
You will find the new version in
ftp.interware.it/users/mike/pub

You can joing the NOS mailing list sending an email to
net2net@bbsgate.interware.it with a subject of:
SUBSCRIBE NOS

Atari NOS 0.45 13 December 1996
by Mike De.Petris
mike@bbsgate.interware.it
2:333/608@fidonet.org
90:700/104@nest.ftn

Some more changes in this version.

- Banner changed. Initial information is written without clearing
the screen, so you can read output from NOS executing the startup
file. To see actual Atari NOS version you can now use "?" help
command.

- RS232 configuration changed. You can now use all standard baud
rates, and extended HSMODEM speeds. You can use both ways, for
example you can set 57600 baud, specifying 57600 or 134.
Form HSMODEM documentation:
* ------------------------------------------------------------------
* With a PCLK of 8Mhz are the following Rsconf-baud rates possible:
* (old - new)
* SERIAL2:
* 115200 - 150
* 57600 - 134
* 38400 - 110
* MODEM2:
* 38400 - 110
* 153600 - 75
* 76800 - 50
* On MegaSTE and Falcon (not on TT) additionally on MODEM2:
* 115200 - 150
* 57600 - 134
*
* With PCLK = 14745600Hz are possible on MODEM2 and SERIAL2:
* old rate new rate
* 115200 150
* 57600 134
* 38400 110
* 153600 75
* 76800 50
```

```
* ---------------------------------------------------------------

- NNTP article posting changed. Command added:
* _______________________________________________________________
* nntp postmode [on|off] Default: off
* _______________________________________________________________
* Display or set the NNTP post mode flag.
*
* This flag determines whether articles has to be posted using the
* "POST" command instead of the older "IHAVE".
*
* >> Example: nntp postmode on
This was implemented as some newsservers do not accept the old
"IHAVE" command. RFC977 says:
The IHAVE differs from the POST command in that it is intended
for use in transferring already-posted articles between hosts.
Normally it will not be used when the client is a personal
newsreading program. In particular, this function will invoke the
server's news posting program with the appropriate settings (flags,
options, etc) to indicate that the forthcoming article is being
forwarded from another host.

- ppp fixed ip changed. No more different compilations of the program.
You can now use the new "fixedip" subcommand:
* _______________________________________________________________
* ppp <interface> ipcp local address [ <hostid> | allow
* [on | off] | fixedip [on | off] ]
* _______________________________________________________________
* Display or set the local address for negotiation purposes. If an
* address of 0 is specified, the other side of the link will supply
* the address. By default, no addresses are negotiated. If fixedip
* flag is set, then an address is negotiated but then ignored, this
* is necessary on some Windows NT servers, which disconnect if you
* set "allow off", but want to use a fixed ip address.
*
* >> Example: ppp pp0 ipcp local address 155.155.155.155
* >> ppp pp0 ipcp local address allow on
* >> ppp pp0 ipcp local address fixedip on

- You should be able to find around the program in two archives:
NOS045.LZH Atari NOS v0.45 for any 680x0
NOS045_30.LZH Atari NOS v0.45 for 68030

- I think I will be able to include POP3 client in next version.

That is only true for munpack 1.2. But you should use option -C if
you want to indicate a directory. Still, the command line handling is
incomplete in version 1.2. It's fixed in version 1.5

Hi,

I am planning to get memory expansion for my 4MB Falcon.

So far the cheapest solution seems to be Falcon Wings card.

If you have experiences with it I would like to know a few things:

What kind of SIMMs does it take? Does it fit inside the Falcon case?
Is it hard to install? How about compatibility? Is it compatible with
all normall software (Incl. MagiC)? Is it stable?

Thanks, Jouni

5023. CD Release, 7 Salt Lake Bands

Newsgroup: comp.sys.atari.st
Date: 1996-12-17 00:00:00 UTC
From: lenkel@inconnect.inconnect.com
Message-ID: <597b6h$ek1@news.inconnect.com>
Source record: 131568

Keywords: PROJECTILE,CD,MUSIC,alternative,new,CD-ROM,bands,art,modern,dance
Summary: Press release for PROJECTILE music CD/CD-ROM compilation 1996/1997

Music CD/CD-rom produced in part on an Atari Falcon!

Compilation ENHANCED CD/ CD-ROM Release!
Decemeber 1996, Salt Lake City, UT

PROJECTILE: 1. a body projected by external force and continuing in motion by its own inertia
2. projecting or impelling forward
3. capable of being thrust forward

Few things in this lifetime occur as we expect them to; though physics tells us that a speeding bullet will increase its velocity before slowing or changing its path, there are countless forces which can alter this law and create entirely new sets of conditions through their presence. Hence, PROJECTILE receives its name and, like its namesake, is launching toward an unknown destination with countless possiblilities awaiting its arrival.

PROJECTILE is a new compiliation of seven Salt Lake City bands which have coalesced to create a poignant moment local musical history; the first multimedia CD/ CD-ROM. A Compilation of 17 tracks, PROJECTILE totals 64 minutes of music, and includes photos, band bio's and lyrics. This recording is as professionally produced and packaged as any major label could offer! The producers have masterfully created a montage of graphical artwork, hyper-linking to the bands' photos and biographies for anyone who wants to browse it.

There is little doubt that PROJECTILE will indeed take off faster than the speed of light due to the efforts of the "scientists" at SITE 51 and LENKEL and all the artists involved who have independently created this work. It will soon be transmitting through the light of a distant quasar.

PROJECTILE is Bubble Couch, Aeon Dawn, Poink, Insanity Void, Mirror Mirror, South, Film & Silver. It will be available in stores after Decemeber 14th, or E-Mail:

Projectile@sisna.com Lenkel@inconnect.com

That was unnecessary. The Atari remains an excellent sequencing platform, especially for those on a budget. And while the price is more that I would pay, I know that in the not-to-distant future I'll replace my crash-prone ST so that I can deal with the many songs that I wrote with it without have crashes all of the time. I have moved on to a Mac, but there are some things in my Atari sequencing program (DR T's Omega II) that I like more than Cubase, which is what I use now.

I just found this discussion:

: >> Is the Falcon's internal IDE support compatible with EIDE
: >> drives?

> : No, it is a 2.5 inch standard IDE connection. If you have a
> Falcon w/o an : internal HD you may not even have the connection
> available (I bought one w/o : and had to get an external
> board...) Otherwise a standard 2.5 inch IDE drive : w/cable
> (basically a laptop HD) is what you need.

> Actually, only PCs identify the difference between IDE and EIDE.
> Any other platform will support EIDE just fine. I know this to
> definietly be true for Atari, as I'm using one right now...

I'd like to add the following:
For the moment I use one 2.1GB and one 1280MB Quantum Fireball EIDE-disks. They work perfectly if I run HDDriver 6, but not with HDX/AHDI or SCSI-tools (haven't had the time to test ICD). Other EIDE HD's larger than 1GB don't seem to work reliably and I've tested a couple of different brands (Conner, Seagate, Fujitsu, Western Digital)...
To sum it up: Use HDdriver at all times, since it's simply the best driver (at least for the moment) and stick to Quantum HD's if you want large ones on the IDE-bus.

Best regards,

Claes

Yeah, and the price of 30 pin SIMMS (_not_ cheap anymore!) and the price of the PAK+FRAK. A second hand Falcon with AfterBurner040 will not cost that much more and the performance is almost 5 times that of a 50 Mhz 68030 and you have DSP (which is supported under LiNUX with a special driver) and better graphics. You also have SCSI-II and E-IDE interfaces, two fast serial ports and the possiblity of boosting the clock-frequency on the whole motherboard with a Nemesis-card. Much more potential than on the ST.

> On the

>log file. I have set the DEFAULT.CFG arguments to ON for the various
>types of logs but still get no logging, so how do you get the log
>files out?

I believe they are all disabled. :-|

Generally speaking, if one client is working then you can usually be
sure stik is. You may be missing some settings but it's working.

Demon are publically beta testing a pop3 server atm. Try entering ...

sdps.demon.co.uk

.. into the POP server dialog and you should be able to receive mail
as well for the moment.

AtariIRC is easy enough to get working ...

irc.demon.co.uk 6668

.. for the server. Unfortunately they've just changed it to something
else (and I've forgotten) so try irc.bt.net 6668.

As for Cab - double check you've got the latest versions of it and
especially cab.ovl ...

http://www.flinny.demon.co.uk

.. and do not use demon's proxy server. It's more trouble than it is
worth unless you been using it long enough to "feel" when it is having
a sulk (remove the HTTP lines).

Reports of its death have been greatly exagerated :-)
This newsgroup alone generates around 100 messages a day on average and the number of Atari users with access to it is a pretty small chunk of the overall user base.

> What's the latest about it ? Is ATARI still selling PC (understand
> Personal Computer !) or gone bankrupt ?
>
Atari have gone to that great business park in the sky - though they gave up on their computer platforms a while before that so few people around here have missed them. All support is from third-party companies (and mostly was even when Atari were around) and from the users themselves - and you won't find cooperation like this on the PC platform!

> What's the power of the new Falcon now ?
>
Well mine's still pretty much as it came out of the box but there are a lot more powerful versions around using third party add-ons like AfterBurner etc. There are also a number of very powerful TT clones around.

> Any software still released ?
>
Yes. Some commercial plus a lot of top quality shareware. What did you have in mind?

No, I don't think an accessory is to blame, assuming we're talking about
the same crash here. The GEMDOS error crash occurs right at the
beginning of the MagiC boot process, before any Auto programs have
loaded (apart, of course, from MagiC), let alone accessories.

In a word, NO! But, you can move all the files from the last 2 partitions into the first 2 partitions and then combine the last 2 partitions into 1 double sized partition! With either icdfmt.prg or Diamond Edge you can then go to partition hard drive and edit the partition info so that the old end sector of partition 4 is now the end sector of partition 3, then delete the info for partition 4 and click on recalculate and it should show 3 parttions! Next thing is to have it write partition info only! then quit the program and check if it took! I've had to do this up to 3 time before it worked, as a last resort you can have it rebuild one partition, just make sure that it is the right one or you lose everything on the partition that you wrongly chose! DO NOT rebuild all!! At least not unless you have ALL the info on your drive backed up first! Have done this many times with no trouble creating MAC partitions for Spectre GCR when needed and reclaiming them after! Though I did wipe the whole drive the last time when I was in a hurry and half asleep! I hit rebuild all by mistake!

I wonder if it has anything to do with having AHDI in memory while
trying to install HDdriver? I understood that the best way to install
hard-disk software is to remove any existing software, reboot from the
floppy disk with the new one, to get the new software working, and /then/
install it to the disk itself.I have HDdriver 4 on my system and that
/always/ installs a basic setup, even if the floppy has been modified. I
have to relocate the drive (from the menu bar) and set the appropriate
ID's. As it installs, only the first ID's if each type is marked as
available (ie IDE 0, SCSI 0,0 and ACSI 0,0)

From: a2124874@rrz.Uni-Koeln.DE
Message-ID: <596431$idc@news.rrz.uni-koeln.de>
Source record: 131634

Hi,

I recently got the new cab.ovl 1.21, but it does not seem to work.
Whenever CAB tries to resolve or connect to a server, the only message I
get is "Error #600". I've switched back to cab.ovl 1.20 ...

Anyway, I'm curious: Does anyone know about this "error" ...?

I think the program you want is called PSSED - it's a
full-fledged editor/librarian for the Yamaha PSS synths. IIRC, it
may even be on one of the Atari CD-ROMs......

Sorry, Mike, but that's not possible - any partition which is changed will
be essentially blank after the deed is done, although you may be able to
shrink C: without losing everything (I wouldn't risk it, however). This is
also true on the PC; it's not an Atari problem, it's just the nature of
how disk partitions are defined.

Atari is a Japanese word. In the game of Go, it corresponds somewhat to "Check" in chess. It means attack. The logo, I'm told, represents mount Fuji. N.B. Sente is also used in Go. It means "initiative".

Source record: 131655

Michael Wellman (micha122@ix.netcom.com) writes:
> Can somebody here please tell me what an Atari Megafile 30 is?

MegaFile 30 is a 30 Meg RLL-type hard disk drive in a pizza box case.
Stacks up nicely with a Mega ST. They're pretty reliable in general,
although the one I have (which has done a LOT of spinning by now) tends to
not spin up if I haven't used it for a week or more. I bought an extra
drive mech, justin case it ever quits for sure. I'm told an MFM mech can
be substituted for the RLL.

>Also, is an Atari 1040 ST expandable?

Yes, it can be RAMmed up to 4 Megs (Toad has a special on the Xtra RAM
board right now). It can also be accelerated to 16MHz (maybe more).
It can be retrofitted with a High Density drive, and of course, with an
ICD Link, that ACSI, or DMA (Hard drive) port opens up the wonderful world
of SCSI.

5073. ZIP Question

Newsgroup: comp.sys.atari.st
Date: 1996-12-17 00:00:00 UTC
From: andy@aholt.demon.co.uk
Message-ID: <850932310_OASIS_@aholt.demon.co.uk>
Source record: 131656

3 questions regarding use of a Zip drive.

1) I have an Iomega Zip and want to exchange data with a
friend who has one connected to his PC. Can a ZIP disk
formatted on an atari be read on an IBM PC ?

2) If not, can I read a ZIP disk formatted on a PC on the ZIP
drive connected to my atari.

3) I have been setting up 32MB partitions on the ZIP Disks. Is
it possible to have one partition on a ZIP Disk (100MB) ?

My setup Atari 1040ST (4mb)
ICD Link II, IOMEGA ZIP, Quantum 105Mb hard disk
Magic 5, NVDI 4

: Well, I downloaded CAB.OVL 1.21, but it turned out to be just the old
: 1.20... :-(

That's odd. I got version 1.21 from that site to put on the YAC mirror,
and what I got was definitely v.1.21. Came with a .DIZ saying this.
Also, the .OVL itself is a diferent length than either 1.20 or 1.20h.

Maybe Flinny messed his links up on his last update. If you want, try
downloading from the US mirror:

http://virtual-markets.net/vme/yac/

5076. ANNOUNCE - SampleC

Newsgroup: comp.sys.atari.st
Date: 1996-12-17 00:00:00 UTC
From: rde@root.co.uk
Message-ID: <E2K5nt.Hqq@root.co.uk>
Source record: 131659

*** PROGRAM ANNOUNCEMENT ***

File: SAMPLEC.ZIP
Name: SampleC
Language: English
Author: Richard Evans
Description: A midi sample dump, sample conversion, and librarian program.
Supports AIFF (Cubase Audio), AVR, WAV, and CDP Soundfile formats.
Non-modal dialogs, multitasking friendly, ST-GUIDE hypertext help.
Shareware - full version available from author at low cost.
FTP from: ftp.funet.fi in pub/atari/sounds
ftp.teleport.com in users/atari

To get the most out of the SampleC demo, you should have the complete
ST-GUIDE package, and one or more sample playback/editing programs -
recommended programs include LPS124, and N_PLAY.

Notes for current release (V1.04) - please save these for reference
---

If your sample replay program supports VA_START, you will have to install it
as the sample editor, not playback program; full VA_START support for all
external programs has been added to the registered version. See documentation
for full details.

SampleC only supports samplers that use MIDI Sample Dump - some Ensoniq and
older Akai samplers do not support this standard.

N.B. The email address listed in the accompanying docs is no longer valid,
anyone interested in SampleC will have to contact me by my snail mail
address; I will have a new internet account early next year.

Many thanks,

Richard Evans

From the places I've called, I'd have to say that "semi-competant" is a
compliment. I don't really think there's any excuse for an ISP not
having even heard of SLIP. I was certainly completely unable to get any
sort of technical information out of most of the places I tried altogether.

It does for UUcoded files. IIRC, that's the only file type that is
supported for command line usage. I'm using ESScode with Wormhole to gate
the NeST mail to/from the UK. I plan to try UUende if I can figure out how
to do it without disconnecting MIDIcom (which TOS apps normally do).

One way is to make sure your floppies on the ST are formatted to be
IBM-compatible, then copy your files to floppy, and use 'em in any Mac that
has System 7.5 (or PC Exchange installed).

>the PC world, but it's not doing anything to help us lonely Atari owners...
>...
>At least a combined programming effort would probably benefit us all, and
>a common platform for writing net software on couldn't hurt.
>...

I think that's a brilliant idea. Basically, we are all waiting either
for STiK to support PPP or for Spider to become available. Combining
the TCP part of Ice and STiK together into one program would give us
full Internet access _wright now_! (Well, in a few weeks :-)) Users
could even get to choose between Ant-Mail/Newsie and Oasis, and also
between CAB and Spider as soon as it's available. No more waiting, no
more searching for SLIP providers, no more messing up with
MiNT/MiNTNet. Just enjoying ourselves surfing the Net with our good
old Atari...

Wow! that would be great!

Guy.

5090. Atari St on the internet.

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: mgrenier <mgrenier@total.net>
Message-ID: <01bbed6d$9aaa70a0$be37eccd@mike>
Source record: 131516

Greetings ST users,

I`ve got a few questions to ask you about using an Atari ST on the
Internet.
Any replies would be appreciated as i`m quite stuck on the subject.

My father owns a Mega 4 STe and he wanted me to connect him to the
internet.

He gets a package from T.A.F. (Toronto Atari Federation) wich includes :
Mint,Xwindows,Slip/PPP,Chimera,Telnet and FTP.

After great pains i finally get it to work (the VI editor is SOOOO
FUN!!!(NOT)...)

After this nice intro here are my questions :

Error 1 - KFREE: MEMORY NOT ALLOCATED BY KMALLOC
(i get this error message when i exit the program.)

Error 2 - ADJUST DEBUG LEVELS
(i get this error message at the same time as error 1 and i DID edit the
MINT.CNF file as
stated in the program docs)

Error 3 - I DO hook up to the ISP but after a while it just hangs up on me
.

Anyways ... that`s about it ... FOR NOW... (grin)

Please email at : mgrenier@total.net

ANY HELP WILL BE APPRECIATED!

5093. STIK and CAB

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: glennm@mail2.sas.upenn.edu
Message-ID: <599bk8$ang@netnews.upenn.edu>
Source record: 131519

Well, I think I have STIK running alright. Using this post to test NEWSIE0.66, which seems to work very well. If this gets out I'll know. Still wish I knew more about the TCP/IP settings, though.

CAB is another matter. Still tends to crash at odd times. Just know I went to Katherine Ellis' page, no problem. Tried the link to OXO Concepts, and 3 bomb crash! I reloaded CAB, and lost 2 of my colors!!(ST medium rez). I quit CAB, loaded the Color CPX and all four blocks were black!!! Even though the desktop looked normal, and the other cpx's were all in 4 color, the color cpx had 4 black boxes. Tried reloading the color cpx, no change. After a reboot, all was fine!!

My setup is:
1040 STe,4 meg, TOS 1.62, 8MZ
Stik 1.12, CAB 1.15, CAB_OVL 1.21, using CAB_JPG

Anyone have any ideas why one web site works and another causes such crashes?

Richard

P.S. I quess I don't have Newsie working too well, had to post this through tin using the shell account. Sigh.

Hello everyone,
I just talked to Jennifer at Toad Computers. I wanted to buy TOS 2.6
and the XTRA-Ram board with 4 Megs memory so I could upgrade my STfm
She said that they have no one to do the installation. The whole
conversation sounded like she just wanted to sell off as much of their
old Atari stuff as they could; but they didn't want to bother installing
any of it. I also asked about their Christmas specials on the Falcon
line of computers; seems their prices are about $100 off of the normal
catalogue prices.

Try going back to CAB.OVL 1.18, I've found the 1.21 just a little to shaky
for me to use it! Also might want to increase the ALLOCMEM setting in the
default.cfg file of stik!

I'm curious about the keyboard layout. Does it add the special
letters (the ones with ~ and `, etc)? If so, what does it leave out?

I'm back. Did I miss anything?

English "[3][Cannot load RSC file!][Abort|Search]"
Deutsch "[3][Kann RSC-Datei nicht laden!][Abbruch|Suchen]"
Nederlnd "[3][Geen RSC-file!][Afbeken|Zoeken]"
Svenska "[3][Kan ej ladda RSC-fil!][Avbryt|Leta]"
Francais "[3][Chargement du fichier|ressource (RSC) impossible!
][Quitter|Chercher]"
Espan~ol "[3][No puedo encontrar|el fichero de recursos!
][Salir|Buscar]"
Italiano "[3][Non trovo il file RSC!][Annulla|Cerca]"

Note: Exact translation is not necessary. The important thing is to convey that rsrc_load() failed. This is usually due to a missing RSC file or messed-up default directory, but can also result from trying to load a version 2 RSC file (larger than 32K) using an older TOS.

Please indicate non-standard characters using 2 letters (e.g. n~ o" a`) as strange things happen to 8 bit ASCII characters when they are sent over the net. (Especially since I get internet messages via fidonet, a local BBS, and an offline reader.)

Also, don't worry about the extra blank at the end of the (longer) line; that's just a cosmetic affectation of mine.

On 18 Dec 96, Jos den Bekker was hired by Jack Tramiel for saying:

JdB> I'm afraid you don't quite understand. A MIME conforming package like
JdB> mpack/munpack handles complete MIME messages. It is exactly right
JdB> that they "look like any other message". It is also no big deal that
JdB> "most are split into ~10k chunks". A MIME conforming package handles
JdB> all that automagically. You may even receive the chunks in the course
JdB> of days, or weeks, or months, or years, and mpack/munpack will keep
JdB> track of them and assemble the final file when the parts are
JdB> complete.
JdB> But why don't you get the package and look for yourself?

If you're talking about munpack, I did and it didn't work. It _appeared_ to work, but the file came out corrupted. After I edited out all the extraneous stuff, it then worked fine. This is with v1.2. I haven't been able to acquire v1.5 (I don't have Web or FTP access, so I generally have to rely on FidoNet or AtariNet BBSes).

Hi kids...!

I need help again! I d/l'ed the PPPKIT14 from CNAM and have managed to
get it setup and I get as far as calling my provider but that's as far as
I get! It will not connect properly.. Anyone see what i'm doing wrong here?

It dials my provider.. it handshakes..

Ok now when I hook up.. My provider send this:

login:

I type my login:

dooley

Then it asks for:

Password:

I type:

123123123 *(not real password)*

Then it asks:

Press: 1. Shell (Unix)
2. PPP

I type:

2

How would I make a script for this?
There is a script there for this but I guess it is not working!
I know I need CR after each.. but not sure if it is sending it correctly!

Actually here is the script that I actually use!
See any errors?

```
ABORT 'NO DIALTONE'

Flinny used to run a bot called n0one, thus s0meone. But I agree it
can cause confusion (the old name "vittu" caused offence to some
Finns, I still maintain this was like Toyota's MR2 in France ;).

> thought it was funny to kick me and then have me banned.
>
> I logged on briefly this AM and was able to access all of the
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
> servers in my list - admittedly a short list.
^^^^^^^^^^^^^^^^^^

Does this mean that before, when you were banned, you couldn't get
onto the server themselves? If so then that has nothing to do with
#atari and/or it's bots.
Alternatively, did you get on the servers and find yourself banned
from #atari? If so then s_o_meone did ban you, do you know if it was
a bot?
Also from the servers you have mentioned so far in this thread I'm
guessing you were going to US-Efnet, and unless this predates the
US/Europe Efnet split, then TB, Aggrobot and s0meone (Europe-Efnet
bots) are definitely not involved.

Yep, that's a nice Drive. Sure, it's easy to chance data
between PC/MAC/Atari. (Mac with MagiCMac)
Watch out for the 32Mb Barrier with DOS.
Under some cirumsdance you get trouble to read the dos formatted Zip
with your Atari and in the reverse procedure.
I use the german SCSI-Tool without problems. (Chance Zips between Mac/Atari)

>2) If not, can I read a ZIP disk formatted on a PC on the ZIP
> drive connected to my atari.

Yep, see upper.

>3) I have been setting up 32MB partitions on the ZIP Disks. Is
> it possible to have one partition on a ZIP Disk (100MB) ?

Yep, 100 (96Mb) without problems between my Mac and Atari.
PC too, i think so.

Well, I think that ICD HDisk utilities would do it. I'm sure that
Diamond Edge would do it. Unfortunately, you'd have to be slightly
insane to try it *without* backing up the whole drive! Email me if
you think you want to try it; maybe I can give some useful tips.
If I were you, I'd ask Santa for a nice backup drive; I'm told that
Comp USA has Syquest EZs for $90. With 2 or 3 carts, you can cover
your whole drive and re-partition with ICD or Diamond with a carefree
heart and a hey, nonny, nonny on your lips.

Hi, everybody!
I have been following this thread for a little while, and I am very puzzled. I have run PageSTream for over three years now, v2.1 and 2.2 on three different machines, and have *never* seen it do other than 'creating page' - 'printing page' for each and every copy of multiple copies. I have even resorted to printing from the desktop and using a recursive macro to keep the printer going full apeed. I also know another pagestream user who liked her solution of a printer that would do multiple copies of a single page sent from pagestream. Using fastprint and this CaTTamaraned TT keeps the DeskJet 500 printer moving pretty good; I was a happy guy. Now several people come along and say that pagestream only 'creates page' *once* for multiple copies. *Can this be true???* Have I wasted half my life watching a box that says 'creating page' when I didn't have to? Please tell me more! I use 'Fastprint', not Outburst (although I have it) - should I be using it?

Message-ID: <850869245@acpu.com>
Source record: 131581

DCroker@mettav.demon.co.uk (Derryck Croker) says:
D > I've had some real beauties; innumerable bombs across the
D > screen with some sort of odd shimmering effect, hardware
D > related I'm fairly sure.
And I have seen (mostly on my old ST, nicknamed Crashmaster):
Carpet bombs: a sort of a barcode effect extruded from a full screen line of bombs, either from the top of the screen or starting at the usual location, and extending to the bottom.
Carpet bombs with rotation: the same, but the 'barcode' is animated - the extrusion of each bomb seems to rotate slowly, all in unison.
All black: the scariest one, at least the first time you see it - it looks like your monitor just died.
The maximum number I've seen is 40 or more on the middle line, +13 more on a line below it.
I don't really want to know what these mean :).

5130. MTG Clearance Flyer

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: rldetlefsen@delphi.com
Message-ID: <pzMUjG8.rldetlefsen@delphi.com>
Source record: 131587

November 1, 1996
Due to slow sales and lack of involvement, I'm having a two step clearance sale.
Step 1:all orders postmarked through Dec. 31, 1996 will be discounted 30-80%. If enough postage is not included, items will be removed to adjust for it. Request the Clearance List. I'll post this list to Delphi, CIS(MTG96S.ARC), and on Internet when I find a place. Its 1225 lines(57K) as text, 538 lines, ARCED and UUENCODED.
Orders postmarked afterwards can be returned or held till after the Feb show, your choice.

Step 2:I've decided to stop reselling previously owned and clearance Atari merchandise as of February 28, 1997. This puts it after the Houston show. No more lot buys, no more requests, and little chance for back orders to get filled. If its not on the list, don't ask 'cause I won't look. Prices will be discounted 30-80% for sales and orders as of the show date, postmarked through Feb 28, 1997.
I'll keep what I want of whats left, return the consignment stuff to their owners, and send everything else to the land fill. Once its in the dump, its gone forever. If anyone wants to bulk buy, I'll make a price. I WILL continue with other projects. Global Atari is one.
I'll spend much more time writing software and doing hardware projects, for me anyway. And I'm starting a new service.

One quirk is that people tend to want the stuff I have only one of. That leaves 2, 3, or 4 people that don't get it. With these items being extremely rare and without support of the manufacturer(those that still exist) or release of copyrights, I'm going to act as a liason for "ESP", End user Support Program. Send me (on disk or via email, ASCII-no document files) a list of the stuff you aren't using and stuff you want to find. Include your email & postal addresses. I'll make disks to include with orders, send as requests, upload as email, and post online(ESPymm.ARC). All of you end users can then get together to exchange software or hardware as needed. If you bought something for a onetime deal, or decide that you don't like it, or just don't use it anymore, put it on the list with a suggested price, shipping extra.

Postal Mail or Email to an address above.

The updated Magazine list will be made available soon.

Rick Detlefsen

5131. Problems accessing 'ftp.teleport.com'

Newsgroup: comp.sys.atari.st

From: hallvart@sn.no
Message-ID: <32b78fbe3d4330@sn.no>
Source record: 131588

I've tried reaching the Rich Tietjens' site "teleport"
(ftp://ftp.teleport.com/users/atari/) for the last few days but had no
luck.

Yesterday and the day before I couldn't even get into the site, today I
could, but it wouldn't let me enter. I usually use NCFTP which automates a
lot of things, but since it wouldn't accept 'anonymous' as login I decided
to try it manually with FTP as I thought it would tell me what to write if
something else was to be used. That didn't work either.

Finally I tried WWW, using 'Lynx'- I was able to enter the site, but not
download anything... :-(
So what's going on? I'd really like to get hold of some files from the
site.

5134. PageStream on Falcon Printing Speed 1:25 !

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <59819s$ngf@huron.eel.ufl.edu>
Source record: 131591

My printing test of PageStream v.2.2 on a plain Falcon (14megs of RAM)
using the IPRN II Demo by Peter Missel.

A full page 8 1/2x 11. with Garamont font various sizes,
plus two 300 DPI IMG of Music.

PGS took 25 seconds to render or prepare the page, and a total
of 1 minute and 25 seconds to print page from the "Print" command.

So yes, PGS2 only takes 1:25 to print the first copy of a full Page on
the Falcon 030.

>IDE connector. For 3.5 inch drives an adapter is necessary, of course.

I just installed a Toshiba 1.03gb 2.5" IDE in my standard Falcon.
I used the stock brackets and cables without problem.
I did have problems with HD Driver V6 not being able to partition
the drive, nor would HDX 5.04. Pulled out trusty old SCSI Tool and
the drive works flawless. According to Howfast, the drive achieves
over a 2.75mb transfer rate using the Hushi driver.

Anyone interested in an 80mb Conner 2.5" IDE drive for the Falcon?

AHDI shouldn't matter if it's installed. Note, however, that the
HDDRIVER installation program (HDDRUTIL) requires an XHDI compatible
driver to be installed. AHDI is not XHDI compliant, i.e. in any case you
will have to start an XHDI compatible driver (e.g. HDDRIVER itself)
before continueing the installation. Of course, this is explained in the
manual.

I also have one to sell:

Atari 1040 ST
SM 124 High Resolution (Monochrome) Monitor

Software (including licences), includes

Steinberg Pro 24 III
Lattice C
First Word (MetaComCo)
Misc Atari software bundled with 1040 ST
and some games. Pretty outdated nowadays, I'm afraid.

Also lots of source code, public domain software.

Of course, all works fine. I used it to produce software
(we wrote a clone of GEM for the PC DOS, OS/2 and
Unix environment, and music (Pro 24 III was THE studio
recording solution of the 80s).

Asking price: make your price.

5140. Ethernet card for Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <yvvwwuggsxe.fsf@emw.ericsson.se>
Source record: 131597
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

Is there a ethernet card available for the Falcon? Can I use the
internet applications with it like CAB, Antmail etc?

What do I need? MiNT-Net or can STiK do the job? As you
see I have no idea how this works.

The reason I ask this is that I talked to our landlord
yesterday and he was thinknig of setting up a ethernet
network in our house using ISDN to get out on the
internet! Cool! As there are not that many apartments in the
house and I can't think that everyone will use it it might
be rather nice and fast even if ISDN isn't that super fast.
I guess he can get more channels to speed it up though. :-))

So can I connect my Falcon or do I have to buy a (spit) PC?

I think I have read about a ethernet card to connect to the
SCSI port being developed.

I realy need to know as soon as possible....

>
>I keep running across X-control and CPX modules and have never used them!
>My only understanding of them are that there are sort of an accessory..
>Is this true? How are they used? Where are they used? and when would a
>good time to use them come in handy? (examples)

X-Control was Atari's 'control panel' for their later models. It was designed
for configuring various system settings etc. Any software which enhances
your computer should come with a CPX module (a loadable 'accessory' used
within X-Control) so that any settings can be made.

The standard modules from Atari configure things such as the screen colours,
the keyclick/mouse settings etc.

There are also CPX's that come with programs such as NVDI (speeds up screen
display), and Maccel (a mouse accelerator from Atari) change any settings.

There are now replacement versions of X-control (zControl, COPS, Freedom2)
which add extra features and fix bugs with the Atari original.

I'm afraid you don't quite understand. A MIME conforming package like
mpack/munpack handles complete MIME messages. It is exactly right that
they "look like any other message". It is also no big deal that "most
are split into ~10k chunks". A MIME conforming package handles all
that automagically. You may even receive the chunks in the course of
days, or weeks, or months, or years, and mpack/munpack will keep track
of them and assemble the final file when the parts are complete.

But why don't you get the package and look for yourself?

5149. MagiC memories

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: Martyn Tidd <etlmntd@etlxdmx.ericsson.se>
Message-ID: <32B7E8FF.41C67EA6@etlxdmx.ericsson.se>
Source record: 131606

Hi all

A short while back somebody mentioned a program that helps with MagiC's memory management. I've lost the message now :-(. Could somebody remind me what it was called and, if possible, give a clue as to where I can get it from.

Thanks

Regards
Martyn

5153. Re: Atari ST computers suck!!!!!

Newsgroup: comp.sys.atari.st
Date: 1996-12-18 00:00:00 UTC
From: slides@mindspring.com
Message-ID: <59909f$mmr@camel5.mindspring.com>
Source record: 131610

I've handled 300 Atari ST Systems, setting them up and taming them and selling them across the US and around the world. The first major discovery I made was that when I sold them the clients rarely asked me anything. It works so easily with the mouse and windows like environment, that most could even do complex Publishing & CAD programs with little help.

We personally have marketed with the systems. The Atari Computers have prepared our 4 color catalog through which we have sold a million dollars of our product. We've done complex publishing since '85 with the beginning of the Atari ST series. With an Atari Computer and Laser Printer, we have done complex things for 1/3 of the cost in hardware / software than IBM and/or MACs .

We currently have a dozen Ataris networked in our office and run several separate businesses; Architecture State wide, Import / Slide Management Systems - world wide, Photography, Computer Sales, and once publishing of a magazine to 50,000 A/V Executives in Fortune 500 companies.

Atari has helped us and our hundreds of clients. I own 1 Pentium, but do 90 % of our work on the Atari Systems. We have acquired and run 100s of Programs on the Atari - and use most of them.

You can certainly pay more, but it is hard to do as much for such an economical price. One client was a student, who graduated Suma Cum Laude from a Technical College in Computer Science. He used his Atari even for his most complex tasks, acquiring Pascal and other languages to run on it. Another client from Germany to US came to run a program on the $ 100 Atari to run their million dollar underground Long Wall Mining equipment. Other clients have achieved national recognition for their development of software. My clients are very successful & productive on their systems. They have produced books up to 400 pages, musicians have created songs, music and advertising jingles. I speak for 100s who have had great success with the powerful, easy to use Atari Systems. Thanks to the Lord for putting these machines in the market place. High Price Systems are not necessary. The inexpensive Atari Computes are really much more powerful than most realize.

I have personally written and or mailed to about 1/4 million people with the use of these computers.

I just have to say that it is great, and computing should be like
this.
Computers are tool. The most beautifull hammer made of gold will work
as well as the real old one. Coz it is justa hammer.
And worse, you might have the chance that your golden hammer will
break with the nail.
Gold isn't as solid as steel.
So in short, get the correct tool. Don't be fooled by the gold.
And do the job.
Bye..

P.S: Merry christmas. :)

Well, I'd say that puts the blame at MagiC's door. Wouldn't you?

That's right. It's much more fundamental than a rogue accessory. Martyn is
correct in the above!!

>better, hack the hardware themselves :-)

Absolutely! This is a ridiculous statement to have made! I'm beginning to suspect that it's an atitude of 'as long as it works on a Mac then sod anyone else) :(
I guess, when I 'finally' get my Nemesis board, I'll have to consign magic to the bin?

Anyone tested this demo on some games... reported successes failures
etc on originals and some cracked versions (I mention these as the
copy protection disk routines often cause problems loading on STs as
well as emulators)

That's right! Blaming Atari for their board design seems a very shaky answer
to me! If Geneva etc. can work with these 'doomed' machines then so could
magic, with a bit of effort!!

I for one, am extremely annoyed at Andreas' arrogant attitude of 'it's your
fault for having a 'unstable' Falcon'. Yeah right! Nobody mentioned 'Falcon
compatible (if you're extremely lucky)' when I spent all that money on it!
So am I likely to get a refund? I blooming well doubt it!!

Demon are unlikely to take action and the correct address is
postmaster@demon.net, I am very concerned that this did NOT come from
a demon user, demon does not give dotted IP addresses in the NNTP line
and this address does not appear to be a demon one anyway, they have
just been allocated a new block of IP numbers so I may be wrong but
most demon IP's begin with 158.

On 19 Dec 96, Jos den Bekker was hired by Jack Tramiel for saying:

JdB> I don't think version 1.2 was that faulty. More likely the messages
JdB> you received weren't exactly MIME conforming as specified in RFC
JdB> 1521/22.

I'm sure you're right. When I said the files are generally split into relatively small chunks, I meant they are split by a mail processor, not by the program that encoded them. They are a single message at the source, but are split up into several messages by the time I get them. I save them back to a single file, but there is extraneous text and blank lines between each message in the single file.

This is not a problem with UUencoded files (either by LED or by your program, both of which are able to separate garbage from data), but it is a problem with MIME files for every program I've tried. Perhaps it's more difficult to separate garbage from data with MIME files.

JdB> But you apparently are able to receive and send email. Use ftp mail
JdB> servers.

Hmmm...do you know of any good ones? Also, a little help getting started (even to get a help file) would be nice. Thanks.

I suspect they're trying to liquidate their remaining inventory without too much of a loss. Now that they're in the PC business, all that old ST equipment is taking up room and costing money to store, heat, and air-condition. If you mention prices, they'll probably come down.

I thought STeve Kipker's STeve's Atari Sales was the last Atari-only bastion, but even STeve has been forced to go Macintosh. But he hasn't made the intimations that he is dropping TOS support (like Toad has).

Apex isn't modular, AFAIK. Contact BSS/Titan with an idea for a feature
and they might include it in Apex if it is a good idea.

Apex Alpha (ie. v3) and Apex Audio are under development...

You can't compare their prices to what a user charges. They are a business with overhead, and they're trying to make a profit. A user is just trying to get rid of something that they no longer need, or perhaps they really need the money and can't afford to wait around for someone to pay the price they'd REALLY like to charge.

Bottom line, if you think their prices are too high or you can get a better deal elsewhere, then don't give them your business. But I don't think you're doing anyone any good by making these unfair comparisons. If Toad goes out of business or can no longer afford to sell Atari stuff at a decent enough profit, we'll all lose a very valuable asset to the Atari community.

We set our prices based on two basic principles: supply and demand. In our experience the prices on that equipment are agreeable to the people who buy it, hence their inclination to purchase.

With all due respect if you would like us to lower our prices, you will need to either increase supply or decrease demand. :)

Hello,

I don't unfortunately have the pleasure of using my Ataris to surf
the net so I do not know a great deal about setting up Internet
access on an ST. I do use CAB (off line) to read HTML Documents
and help me to test my WEB Page. It is a very good browser.

You could try looking at:
http://www.tripnet.se/~mille/english/atari.html

You will find this site contains a lot of information and a suite of programs for setting up Internet access on an Atari.

Hope this is a little bit of a help,

Yours,

Ben Hills.

I own two Atari Computers which I am very pleased with. I hope I shall
never have to go over to the PC Platform.

Within one of the paragraphs you mention that you have a dozen Ataris
networked together. How have you done this? I only know of software
that will allow you to connect a maximum of seven Ataris together.

Thanks,

Ben Hills.

I have Master Tracks Pro / Band In A Box for my old ST.
Will this emulator work with my midi studio gear?
I have heard stories both ways; it will and it won't.
Any light on the subject would be appreciated.

> formatted on an atari be read on an IBM PC ?

Yes, it can. Formatting is not important, partitioning is. If your disk
was partitioned DOS compatible with SCSITOOL or the tools coming with
HDDRIVER your PC can use it.

> 2) If not, can I read a ZIP disk formatted on a PC on the ZIP
> drive connected to my atari.

Yes, you can. Note that you need MagiC 5 or Big-DOS if you want to have
access to DOS compatible partitions > 32 MByte on your Atari.

> 3) I have been setting up 32MB partitions on the ZIP Disks. Is
> it possible to have one partition on a ZIP Disk (100MB) ?

Yes, it is. Once again note that you need special software (see above)
for your Atari in this case.
BTW, the current version of HDDRIVER is able to create, read and write
DOS compatible media that don't have a root sector. This is a special
format where the very first sector doesn't contain the partitioning
information but is the boot sector of drive C:. I guess you're talking
about this format when you're talking about a DOS format with one
partition.
The demo version of the current HDDRIVER is available via anonymous ftp
from acp5.chemie.uni-kl.de/pub/atari.

So the hardware of the machine that crashed your disk is not working
properly. You can't change any data on write protected floppy disks if
the floppy disk drive works correctly.

Well...just fill up your audio partitions for starters...then create a
directory in one of your "other partitions" for new audio files. There
is no reason why all of your cubase audio files have to be in the same
partition, or even on the same hard disk for that matter.

If you really want fewer...larger partitions...your safest bet is to make
sure you've backups of your important data, repartition your drive, and
start from scratch. It is possible to tie partitions together...but it's
a bit risky unless you know what you're doing!

: Sanyo MBC 550/555 User's Handbook, by WSI (what the heck is a Sanyo MBC 550?)

The Sanyo MBC 550 is a 3.6MHz 8088-based machine that runs MS-DOS.
Apparently it shipped with 128K, but was expandable to 256K.
It had an 80-column display, and 640x200 8-colour graphics.
The 550 came with a single 160K 3�-inch floppy drive, and the 555 came
with two drives.
It shipped with WordStar and CalcStar, BASIC and some other software.
The thing looks like an old VCR with a keyboard or something.

I've never seen one, I've only seen it's picture and some basic stats in
a book I borrowed from my university's library. Reference is:
Longley, _The Microcomputer Users Handbook 1985_, p.286. (Sorry, that's
all I wrote down - so I could find it again.)

If anyone has any more info on the machine, I'd love to hear it.
Unfortunately, though, this is off-topic for most of the newsgroups this
is posted to. ;)

LH> dust on it. It is quite possible (if the CaTTamaran
LH> accelerates the FPU to 48 MHz as well as the 68030) that the
LH> FPU has simply been fried because it's been run above spec.

I got that 'Line 11 emulator' from organic memory. Correctly, it is
'Line 1111 emulator', according to the bomb list I have.

As I mentioned to another, the actual number of bombs that I get
when accessing the fpu is about 23-24 (the screen clears back to the
desktop too fast to count accurately). I do occasionally get 11 or
13 bombs at other times, but I don't remember under what
circumstances.

Somebody mentioned 'antibomb'; afaik antibomb doesn't run on the TT.
I ran it on my ST for years, but I chucked it when I got my first TT.

Thanks to all who have helped with the problem with my CaTTamaraned
TT. I expect to have it fixed before long. I have long suspected
that I had hardware problems in this one.

Lots and lots of things! Start by going to Hallvard's website
http://home.sn.no/~hallvart/ and reading the FAQ's there.

S > Is it any good to try to connect it somehow to my win95 pc?

There are programs around that will make this possible. I wouldn't
start from there, though, unless you are at least an amateur network
engineer. First thing is to get familiar with how the ST works.
After that, the sky's the limit!

Welcome to the World of Atari!

Twist should be available from HiSoft. They also do (did?) Superbase
which I have owned since 1988 and always found to be reliable and
flexible. Because it's older it's probably cheaper too but neither are
now supported (no change there then :-|)

5209. Selectric

Newsgroup: comp.sys.atari.st
Date: 1996-12-19 00:00:00 UTC
From: josdb@xs4all.nl
Message-ID: <32b959da84ef40@xs4all.nl>
Source record: 131491
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I'm having problems with Selectric and MiNT. Selectric doesn't work
properly with MiNT sensitive programs which set Pdomain to 1 when MiNT
is installed. Filenames are shown in lower case, then, and Selectric's
mask patterns don't work anymore, even with `lower case' option
switched one.

If there isn't a solution to the problem, what's the best alternative
to Selectric?

I have a laptop that will do this to any disk formatted on an Atari, as
well. It's definitely a hardware problem. The best thing to do in this
case is to format the disk under Windoze and then use it on the Atari.

I don't think version 1.2 was that faulty. More likely the messages
you received weren't exactly MIME conforming as specified in RFC
1521/22.

>I haven't been able to acquire

>is there a solution?
>Yours, Jostein!

You can use ICD's AdSCSI+ or LinkII.
You'll need:
-cable from DMA/SCSI port to AdSCSI+ or LinkII
-AdSCSI or LinkII
-power supply for AdSCSI or LinkII
-cable from AdSCSI or LinkII to ZipDrive
Plug and Play!

I think there is an European DMA/SCSI adaptor as well.

We are looking for an HP Deskjet 400c printer driver for an Atart STe,
it will be used in conjunction with the WriteOn 1.0 word processing
pacakge.

If a driver is not available for this package, is another package available
that does have a driver for this printer?

Can anybody recommend any UK PDL's or FTP sites where we might look for
drivers?

Thanks In Advance.

>What about using a PC Ethernet card for the parallel port?

I think that you will find that Atari's implimentation of the parallel port was never meant for bi-directional data transfer and therefore doesn't have all the lines necessary for it to be used like the IBM version! This would negate any effort to use a PC parallel port ethernet card on any Atari computer, or for that matter any parallel port device for the PC other than a printer!

>: PC. you won't regret it!!!

Actually, it is much easier to turn a games console into an applications
engine than it is to turn an applications engine into a games console.
Game software is quite a bit more taxing and requires programming in
real time. This explains why a PC tends to need expensive hardware
upgrades constantly to be able to do any gaming.

Whereas a 10 year old 'games console' can still do the bulk of what
an applications user would need it to do.

Thank you! I have the demo version and many features are not "turned on".
I do have a question for you....

I have noticed that the GIF format (I used Speed of Light to convert an
IMG file produced by Pagestream) turns 300dpi into 300 screen pixel size
(not sure if I am saying that right). Anyway, the resultant image size is
huge when I import the GIF back into Pagestream. Does GEMView correctly
print a GIF in the same "dpi" resolution that I created the page in? For
example, does a 300 dpi IMG file converted to GIF correctly print at 300
dpi (is an 8-1/2 x 11 doc still 8-1/2 x 11?)? I ask because I have to way
to print a GIF except from within Pagestream. Thanks...

Depends on the printer. Some printers support a "multiple copies"
command, some don't.

One could create a printer driver capable of spooling out multiple
copies of pages, but it would have to keep an entire page of rasters
in RAM. Or you could just "print" to disk and copy the disk file to
the printer multiple times.

5224. Epson Stylus Color II driver

Newsgroup: comp.sys.atari.st
Date: 1996-12-19 00:00:00 UTC
From: jnorton@nilenet.com
Message-ID: <59bupe$qtq@thoth.nilenet.com>
Source record: 131506

I am using Dr. Noonan's Epson Sylus driver for Pagestream. I have noticed that with very large font sizes, the driver causes lines to print across the page. I have watched closely over the past few months and what seems to be happening is that the driver only prints a short section at a time and, if the fonts are large, then it (somehow) prints the bottoms of the letters at the top of this print section.

I wish I could explain this better. But, I have seen this many times and this seems to be what is happening. Only happens with big fonts and (for example) the the very bottom edge of a 72 point size letter "A" will print two short lines above the letter that correspond with the bottom of the letter. Weird. Has anyone else seen this? Any programmers with a Stylus willing to tackle this problem (or at least try to reproduce it? I love my Stylus but I have to always work around this problem.

5225. Re: Toad Christmas SPECIALS -- through 12/23/96!!

Toad's prices for used ST equipment are way too high, IMO. Last week, an
Atari dealer offered me a NEW FALCON for $300 (albeit 1MB, no HD).
Compare this with the $299 "special" Toad is offering on USED STe's.
Also, a few days ago on this very group someone was selling a VERY nice TT
for $300. I think people in this group ought to write to Toad and tell
them that we are not willing to pay these prices! I know that Toad has
long supported the Atari platform, but that is not an excuse to excercise
price gouging. If you agree, write to Toad "Toaday" and let them know
their prices are way off. I think the Atari community will be better off
with realistic prices set for equipment.

5226. Need help with CAB/Stik

Newsgroup: comp.sys.atari.st
Date: 1996-12-19 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <59casm$cfd@ultra.sonic.net>
Source record: 131508

I have the following setup: CAB 1.50 030, Stik 1.12, CAB_ovl 1.18 on a TT with 4+4. When I use a large disk cache and let it fill up, I get a long drive access after drawing each new page. If I clear the cache, the problem goes away but as the cache fills the access gets longer and longer. I believe CAB is writing to a file that grows as the cache grows.

Problem two: The docs talk about using a minix file system for the cache to allow for long file names. The problem is, it doesn't tell how to use the file system. I created a minix fs and pointed th cache path at it, but it used 8.3 files.

Thanks for any help.

From: "Mark Butler, Atari ST and Webb Author" <mark@dwell.demon.co.uk>
Message-ID: <S5mq6GADdcuyEwgk@dwell.demon.co.uk>
Source record: 131513

The UK National Lottery Program, Lottery Companion was reviewed in issue 2 of Atari Computing and achieved a score of 90 percent.

A small printing glitch stopped the score being visable, but it, and all other ratings will be reprinted in issue 3.

If you havn't heard of Atari Computing by now then it's a great read and well deserved of your support - Contact Mike Kerslake (mkerslake@cix.com pulink.co.uk) for details.

If any one is interested in trying out Lottery Companion, version 4.04 is available from all usual PD sources or can be downloaded from the Web site in my sig.

Version 4.1 will be released early in 97.

A big thank you and a Merry Christmas and Happy new year to you all, especially those who have support Lottery Companion.

Long live the Atari.

ALB.

```
>*** PROGRAM ANNOUNCEMENT ***
>
>File: SAMPLEC.ZIP
>Name: SampleC
>Language: English
>Author: Richard Evans
>Description: A midi sample dump, sample conversion, and librarian program.
> Supports AIFF (Cubase Audio), AVR, WAV, and CDP Soundfile formats.
> Non-modal dialogs, multitasking friendly, ST-GUIDE hypertext help.
> Shareware - full version available from author at low cost.
>FTP from: ftp.funet.fi in pub/atari/sounds
> ftp.teleport.com in users/atari
>

And just to add my voice - I've seen the beta of this program - it looks great
and is a very useful tool for those of you into sample dumping. A good librarian
and convertor - check it out!

Simon

I find this discussion a little funny as I did a check of all the ISP in my
city of which there are 34 of them and lo and behold 30 offer a SLIP
connection . Maybe we are a little spoiled being we are the capital of
Canada but my provider Hookup Communications is a National ISP so why don't
all these people just switch and then they will be able to use Stick,Cab...

R> Interesting. The nearest I've got to this ATM is CLA v3. Any idea who
R> markets Scooter? Have you done an Allfix for it? I'd really like to
R> have a look at a demo if it's around.

The demo we've been looking at is the one I was given at the Birmingham Atari show. I've file-attached it to a few people, but it looks like it'd be worth bunging it through Fanfiles.

It isn't marketed in the UK AFAIK, but available in Germany. The About box contains the following details:

Scooter-PCB Color v2.10c demo
HK-Datentechnik
Dipl.-Ing Hubert Kahlert
Heerstrasse 44
D-41542 Dormagen

No idea of the costy, but i don't expect it to be cheap. It requires TOS 1.4 and above and runs happily on TTs, Falcons and with graphics cards.

From: molin@smurfy.tcimet.net
Message-ID: <molin.850965140@smurfy.tcimet.net>
Source record: 131550

frank@tachyon.co.uk (Frank Charlton) writes:

>Here's hoping you all have a good time this month. No hidden agenda, no ads
>for websites, no stuff for sale, no flames... just Merry Christmas! :-)

Here's my contribution!

Many years ago a company named Soft-Logic released a desktop publishing program for Atari ST computers called "Publishing Partner". One of the sample documents included in the package created and printed a recipe card for a terrific, easy-to-make batch of carmel corn. No thermometers! No fancy drop-the-ball-of-glop-into-water routines! I'm talking EASY! Anyway, this is that recipe along with some slight modifications which reduce the overall project time, start to finish, to approximately 25 minutes. So what are you waiting for???

You'll need:

1 cup butter
2 cups firmly packed brown sugar
1/2 cup light corn syrup
1 teaspoon salt
1 teaspoon vanilla
1/2 teaspoon baking soda
6 quarts popped corn

redskin peanuts -- optional
spray vegetable oil
paper grocery bag, extra strength

Here's whatcha gotta do:

If you have an automatic popper, then get it fired up. You'll need to make up about 6 quarts, which will take approximately 3/4 cup of unpopped corn. If you still make popcorn the old fashioned way -- shaking and shuffling a pot over a range -- then forget what I said about this only taking 25 minutes. I lied.

Melt the butter in a large sauce pan. Stir in the brown sugar, corn syrup and salt. (I call this The Glop.) Bring The Glop to a rolling boil, stirring constantly. Lower the heat to medium and boil without stirring for 5 minutes. (Yes, that says 'NO STIRRING')

Whilst The Glop is simmering, you can prepare these items: Lightly spray two large cooking sheets with the vegetable oil and set aside. Spray the inside of the grocery bag, but don't saturate it.

After The Glop has simmered for 5 full minutes, remove from heat and stir in baking soda and vanilla. (Watch out! The vanilla is gonna start a minature volcano and may splatter...) Mix very well, being sure to stir into the outer bottom edges of the pan.

Dump the popcorn (and peanuts) into the bag. Pour The Glop onto the corn and stir with a long-handled wooden spoon. Work fast, The Glop will start to harden quite quickly. Roll the top of the bag closed tightly, and place in a microwave oven on High for 1 minute. Carefully open the bag -- there's steam in there, just waiting to burn your hands -- and stir as above. Repeat twice more.

Pour the hot carmel corn out onto the two cooking sheets and stir continuously to separate the kernals so they don't clump together. Although I've never done it, I suppose at this stage you could also form it into popcorn balls.

Try Not To Eat It All The Same Day!

How's that for a holiday treat!!!!

I assume that one of the ISP's there in Ottowa is also the one I use here
in Austintown, Ohio, concentric.net. They cover over 200 cities in North
America, not just the USA. They offer SLIP and a Unix shell with 5 meg
work/web space and the service is very good! At least where I am, though
there has been some grousing in several locations, but just till the
upgrading schedule got around to their city! Growing pains I guess!

From: Bob Styles <bstyles@ix.netcom.com>
Message-ID: <32B96A42.18E6@ix.netcom.com>
Source record: 131553

I have 2 Atari ST computers for sale (or possibly give away), here's the list:
1040ST with built in drive
520 ST with external drive
Color Monitor
Mono Monitor
50MB Hard Drive in external case (room for More)
Several years of magazines (Current notes and AIM)
Lots of assorted software both games and applications; the full set of AIM PD disks fully cataloged plus many more odds and ends.

I also have the Portfolio with both parallel and serial interface and several memory cards plus a pocket 2400baud modem.

If any one is interested please email me at bstyles@usa.net or email reply to this msg. Because of the sheer bulk of all of this I will not mail out (unless someone wants just the portfolio); we could either arrange for me to deliver or you to pick up. I live in Wilmington Delaware and would be willing to go up to a couple hours drive to give this stuff a good home.

Bob

d>
d>
d> I suspect I'm having a problem that involves paths and environment
d> variables. Freeze Dried, Rejoinder, Pagestream, are most affected.
d> Is there a common reason this happens? Fragmented memory??

You don't say what the problem is. If you aren't trying to run a program from within another (ie "execute" from a file menu) then you shouldn't really need to worry about env. paths.

If you have tried to install the prog from a desktop then you must be careful to set it to use the prog's path, not the topped window.

HTH.

Actually, GEM-View will convert between many formats, including GEM Image
(IMG) and GIF (at least in the registered version). I have seen it doing
it, and can confirm that it works.

Actually, I think this is a feature.

If you run, say, lines while you move the mouse into the menubar, you will
notice that the lines continue to run. Under all other AESs the lines would
stop. Since the screen below the menu may have changed in such a situation,
oAESis must redraw the area below the menu rather than just putting back
what was there previously.

I actually find this feature quite handy. Some software that draws a
progress bar will simply stop when it cannot update the bar. Under other
AESs this is a problem whenever I access the menu bar, but under oAESis it
will keep going. Sometimes my mouse will drift into the menu bar and halt
an operation, but this does not occur under oAESis.

Try this instead of just 2!
2. PPP 2
At least that ought to do it if the login: and Password: work!

Hi There,
I really don`t think this might be the problem but try to send the
following commands to your
modem before login on to you ISP ...

AT&F1
AT&W

My provider tells me that this will set the RTC/CTS to a HARDWARE control
and not to the
usual software control that we have.

Like i said ... this is a long shot as i`m not very familiar to the
Internet using an ST.

Ciao!

Ermm if you want to access the ftp versions try using ftp instead of
http to access them :)
eg ftp://ftp.demon.co.uk/pub/atari/stik
if you want the www page its http://www.flinny.demon.co.uk

Nick.

>english public domain. The demo version of Gemview says that it will,

There are not that many actual 'Public Domain' programs at all and all the
image conversion programs suggested so far on this thread seem to be
ShareWare or commercial.

MGIF is FreeWare (which is not the same as PD) and can (among _lots_ of other
things) load IMGs and save GIFs. If your image is very large you might run
into problems, though, since MGIF always handles images as (at least) 8 bit
internally and therefore can use quite a bit of memory.

I don't know which ftp sites have MGIFv5, but if you fetch it directly from
my WWW site (see .sig), you'll find the latest beta version as well. Quite a
lot of things has happened since MGIF v5.00 was released a year ago.

One thing about GIFs, by the way:

Most programs that read or write GIFs are illegal in many countries nowadays
since there's a patent on the LZW compression used and you have to pay
royalties to Unisys to use it.
Since I don't make any money from MGIF, it's possible that I'll have to
remove the GIF support. :-(
I've been trying to get Unisys to understand the problem, but it seems they
don't take the time to read my entire messages...

It's too bad the WWW relies so much on GIFs or everyone could have moved on
to a better format, like PNG.

```
: >I am looking for a cheap way to use my SCSI Zip with my Atari 1040ST...
: >is there a solution?
: >Yours, Jostein!
:
: You can use ICD's AdSCSI+ or LinkII.
: You'll need:
: -cable from DMA/SCSI port to AdSCSI+ or LinkII
: -AdSCSI or LinkII
: -power supply for AdSCSI or LinkII
: -cable from AdSCSI or LinkII to ZipDrive
: Plug and Play!

NOTE: If you use the Link...and you've no other SCSI devices connected,
you'll need to find a way to get power to the Link. The ZIP drive
does not provide Termination power. I've heard you can built a cable
to steal something like 3volts from your joystick port.

If you use the Link, and have another SCSI device to plug into the chain
(such as a CDROM, or another hard disk) that does provide termination
power, then you DO NOT need an external power source for the Link.

The AdSCSI hosts require a power-supply/chassis period.

I don't think so, but then my German isn't very good:)

Bei der Connectix QuickCam handelt es sich um eine s/w CCD Kamera

mit parallelem Anschluï¿½stecker fï¿½r Windows PCs, die an den
ATARI

ï¿½ber den mitgelieferten ROM-Port-Adapter angeschlossen
werden kann

* * *

Mitgeliefert wird die Software QuickView 1.0 fï¿½r
TOS/MagiC,

die in der 1.0 Version Screenshots und Bildsequenzen im

XIMG-Format abspeichern kann, und das TWILIGHT-Modul
QuickCam.

* * *

Folgende Funktionen bietet die Software QuickView ...

- 320 x 240 Bildpunkte bei 4 Bildern pro Sekunde (fps)

- 160 x 120 Bildpunkte bei 15 fps

- 80 x 60 Bildpunkte bei 25 fps

- 16/64 Graustufen

- Weiï¿½abgleich/Autoabgleich

- Kontrast

- Helligkeit

* * *

Folgende Funktionen bietet das TWILIGHT-Modul QuickCam ...

- 320 x 240 Bildpunkte bei max. 4 fps

- 160 x 120 Bildpunkte bei max. 15 fps

- Kontrast

- Helligkeit

* * *

lieferbar ab Anfang November 1996

* * *

Preis: DM 349,00

(Komplettpaket aus Kamera,
ROM-Port-Adapter,

QuickView 1.0 (TOS/MagiC),
QuickCam-TWILIGHT-Modul)

I don't do much Dbase stuff, but I know that
with PC Ditto, even an ST will run older
versions of Dbase. I tortured my girlfriend
during her college stint with it. It's pretty
slow, but will do the job. PC Ditto can be
had pretty cheap.

The problem was at this end as the firewall we have installed has not
been configured for use with netscape. I managed to do the ftp transfer
by hand ie (using the ftp program) after some help from djs
(David.Stephenson). The HENSA site is restricted to educational
institutions from 08:00 hrs to 20:00 hrs GMT but you should be able to
connect after that time.

I recall seeing some ethernet card recently from Pam software. It was mentioned in an ST Format magazine that this card was shown at a German show. I am unsure when this was, but I believe it may have been inside the past year or so.

I have also heard of a Bionet ethernet adaptor, but I don't have any more details about this.

MiNTNet comes supplied with drivers for some network cards: DE600, AMD LANCE ethernet, PAM's DMA ethernet, BIONET DMA adaptor. So it sounds like you can use MiNTNet with many ethernet cards, and therefore CAB, aFTP and other internet-related software. And via GlueSTiK, you can use Antmail and other STiK internet software.

Does CAB not work at all under MiNT, or is it STiK that gives problems
under MiNT? What exactly is the problem?

I was trying to set up STiK for someone and successfully got it to dial
under MiNT. I never tried out the connection, however.

I can't think of anything relating to MiNT that could affect CAB.

>>And BTW, you do _not_ need a Minix partition to use MiNTNet.

You could set it up yourself, but if you are not familiar with Unix you
would better off using something like PPP-Kit. With PPP-Kit you just follow
some simple instructions of where to copy files, edit a couple of
configuration files to put in your domain, DNS etc. Everything is explained
in a simple instruction file. The only problem is that PPP-Kit comes setup
for PPP. If you want SLIP, you will have to install the DIP software
yourself (not difficult).

>ChainXOR... Oh boy, another setup to run besides normal TOS, MagiC 4 and
>now MTOS too??? I don't think I want to move backwards to MultiTOS,

You don't need MultiTOS to use MiNT.

>unless of course someone points me to something new with Mint and the
>last stable AES to use for GEM.SYS etc. Are all the files (including
>AES) available from umich or paderborn?

The latest MiNT version is FreeMiNT 1.14 AFAIK.

And you can use an AES like N.AES with MiNT (this can't be compared to the
old Atari AES 4.0) or you can just use the AES built in your machine's ROM.

MiNTNet is by far the most comprehensive network setup for the TOS
platform, and by using one of the pre-done easy-to-use packages like PPP-
Kit, you don't need to know anything about Unix to use it.

From: Sam Ellis <sce196@ecs.soton.ac.uk>
Message-ID: <Pine.LNX.3.91.961220125714.1689A-100000@snug>
Source record: 131378

I'm trying to run ST-Guide from floppy disk on a 520STFM. It loads Ok,
but whenever I try to view any guides it crashes. :-(

More specifically, it crashes just after it has displayed any hypertext
links in it's window. Sometimes it will just lock up to system, and on
others it will cause the computer to be reset. There are never any
'cherry' bombs.

I have tried editing the .INF file, but this does not make any difference.

Any help would be most welcome. Please reply via email, as I won't be
able to read my news for a few weeks.

Sam Ellis.

You should have a disk with your Falcon which contains AHDI,
Atari's Hard Disk Driver Software and a few other programs
to format and partition your drive.

Yours,

Ben Hills.

As I understand it, the disk drive only tells the computer whether the
disk is protected or not, but it is then up to the computer do decide
whether it will allow write access.

Pin 28 on the 34 way floppy disk drive connector is the Write Protect
Sensor this tells the computer that the floppy disk is write protected.
All floppy disk drives refuse to write to a write protected disk.
Even if the computer writes to the disk mechanism the electronics will
not write to the floppy disk.
If your drive mechanism is faulty you can check by testing the signal
with and without a write protected disk in the drive. This will be the
case even if you have a drive which has the problem with media detect.
All floppy disks should have a unique serial number when formatted, if
your formatter progam doesn't do this get a program that does.

> perchance?.

Not at all Frank. Like most Atari users I have collected a lot of stuff over the years. Most of it I do not even use anymore, and am thus getting rid of it.. streamlining.. collecting together money for my wedding early next year. Some things are more important than a few bits of computer kit. ;-)

I still love the Atari platform... yes I have been peeved off with a few things now and again, but I still find it fun to use. I am setting up my sister with an Atari STe and hard disk and modem. Just setting it up, installing the software on it.. so much fun. I don't get that fun from my Mac.

So, I am here to stay.

As for the magazines, I already have a full set. These extras came about when I was collecting a full set... so I am just getting rid of space hoggers. :)

> Listen, I'm still getting a lot of emails on the net and the BBS, asking a)
> where the hell you are, and b) what's happening with CyberSTrider
> registrations. Seeing you dumping a large amount of Atari stuff is not
> exactly going to inspire confidence, mate....

Once again, I am not leaving. Registrations are going out, and people who have received theirs will be able to confirm that. However, as the backlog goes back quite a few months I will be unable to process registrations over 5.5 months old at this time as the checques will not be valid. I am returning these cheques to the people who sent them with an explanation and apology.

> Time for an "official" statement from you, to quieten the ongoing storm,
.

An official statement of the changes within CyberSTrider will follow in about a month.

Oh, and Merry Christmas, BTW. :)

Regards
Danny

forwarding the message to abuse@demon.net is a better bet though.

> I am very concerned that this did NOT come from
> a demon user, demon does not give dotted IP addresses in the NNTP line.

Still, best to email abuse at demon and also the people who own the
block of IP addresses in the NNTP posting.. Cableinet.net... although
from what i can gather.. this IP address is not assigned to anything.

> and this address does not appear to be a demon one anyway, they have
> just been allocated a new block of IP numbers so I may be wrong but
> most demon IP's begin with 158..

True, the 195.188.0.0/16 belongs to Cableinet. However, Demon do not
only have 158.152 addresses... they have more.

5278. Christmas Pot of Gold (stuff for sale) (INTERESTING MESSAGE)

Newsgroup: comp.sys.atari.st
Date: 1996-12-20 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.122096.155905.82@wxs8-6.worldaccess.nl>
Source record: 131386

This is the December 20th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you may not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)

The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM

I also have for sale the Suzy B's Software Treasury, a double CD ROM with over 1000 Kb of Atari
stuff, too much to even begin to summarize here. It's yours for 15 British pounds (or the
equivalent), including postage (2.5 British pounds - or equivalent - extra in case you live
outside Europe).

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

Of course, while I'm at it, I'd like to wish you all a great Christmas and a long 1997! :-)

I've got a feeling that this is one of the areas where a TOS-formatted
disk is not the same as a DOS-formatted one. IIRC, a DOS box doesn't see
a changed TOS disk as being different to its predecessor unless you
manually force a media-change detection, eg DIR in DOS or F5 in Windoze.

I have those and they contain shareware, public domain and some demos.
There also is a bunch of MIDI music files, Spectrum pictures (and other
formats). I personally think it is well worth it, even though I think I
paid more than that though for them.

5282. DynaCADD on a TT or a Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-12-20 00:00:00 UTC
From: trek@ihgp15.ih.att.com
Message-ID: <59edh3$88a@ssbunews.ih.lucent.com>
Source record: 131390

Can any one tell me if DynaCadd will work on a Falcon or TT?
I know the manual says that it was written for ST's and after
trying it out I have found that if I try to use a multisync,
even if set to 2 color mode, I get "protection cartridge not
installed" when I try to start DynaCadd. If I hook up an Atari
mono monitor, then it comes up just fine.

So I tried it on a Falcon with VGA, selecting ST compatible mono
and I get the protection cart. error message. THen I tried the
mono monitor on the Falcon and still get the same error.

So, does this wonderful package just not work with 68030 based
machines??? Anyone? Thanks, Wayne Booth

z > Anyone have plans to stack some cheap jaguar 64 chips to make
z > a low cost workstation with a 64bit OS?

Only the graphics chips on the Jaguar are 64 bit, which is also true
of the TT and Falcon.

This is a very old version, and almost certainly has some bugs. You
probably want <URL:http://www.cs.duke.edu/~dsb/files/gluestik-0.02b2.zoo>
instead.

>under MiNT? What exactly is the problem?

STiK seems to connect fine, but as neither CAB nor NEWSIE work when MiNT is
insalled, I think STiK is the problem!!

>
>You could set it up yourself, but if you are not familiar with Unix you
>would better off using something like PPP-Kit. With PPP-Kit you just follow

I thought the PPP kit was only able to be used with a SINGLE TASKING operating
system, not with Geneva - at least this is what the instructions said.

Hi Boris,

2 things to try:

1. reinstall your printer driver, it might be corrupt - I get this sometimes
after using Diamond Edge :-(

2. make sure you set all of your executables to run in TT ram (assuming you
have enough. I have had some crashes when running some TeX executables in ST
ram when there is not enough to spare...

Hope this helps... worth a try.

Main <main@conrad.appstate.edu> wrote:

: Toad's prices for used ST equipment are way too high, IMO. Last week, an
: Atari dealer offered me a NEW FALCON for $300 (albeit 1MB, no HD).
: Compare this with the $299 "special" Toad is offering on USED STe's.

I agree Toad has High prices.

: Also, a few days ago on this very group someone was selling a VERY nice TT
: for $300. I think people in this group ought to write to Toad and tell
: them that we are not willing to pay these prices!

Why should I? I vote with my pocket book. I am not willing to pay those
prices, so I wont. Toad loses a customer. They have a right to ask whatever
they want for their Atari stuff.

: I know that Toad has
: long supported the Atari platform, but that is not an excuse to excercise
: price gouging. If you agree, write to Toad "Toaday" and let them know
: their prices are way off. I think the Atari community will be better off
: with realistic prices set for equipment.

I agree here. The Atari community should have realistic prices. Toad
doesn't have those realistic prices, so buy used. I have never understood
how Toad became THE name in Atari. I wont buy from 'em.

I have gotten alot of BUS errors with 1.21 when I try to sign onto
some websites. I switch to 1.18 and I am error free. I am using a
Hades DirecT60 so that may be another reason. Maybe a Cab.ovl for the
Hades clones would be appropiate.

Although I haven't tried PPP-KIT I see no reasons why it shouldn't work with Geneva.
I've use the TAF-packet to install MiNT/mintnet and I can use Geneva
(release 5) without any major problems.
The only thing you should keep in mind is that geneva.prg must be run
after mint.prg.

Hopes this help

IMHO: The best alternative is Freedom 2. It works perfectly with MiNT.
Another FS that runs quite happely under MiNT is Boxkit 1.77
A demoversion of these FS's can be found on the Net.

5302. $$$ "Have some cash" $$$

Newsgroup: comp.sys.atari.st
Date: 1996-12-20 00:00:00 UTC
From: tuomas.paasovaara@pcb.mpoli.fi
Message-ID: <8CE8467.0528005303.uuout@pcb.mpoli.fi>
Source record: 131410

Hi;

Everybody is doing it... so there must be some degree of success
somewhere. For five one dollar bills and five 32 cents stamps why not ?
I showed this posting to five other people at work and they immediately
formed a line behind me waiting to follow my lead. So my five dollars
appeared to have been recouped even before I got started. So give
yourself five minutes and read below the story of the person ahead
of me.....

I pulled this posting off the Net on 16 Nov 1996 @ 06:35 EST,
I don't know if the claims are true, but I can see no reason to
disbelieve them. Beside which I have nothing but about $7.00 invested,
therefore literally nothing to lose and very much to gain. I have
seen simular postings all over the net. It dawned on me that the
reason that EVERYBODY'S DOIN' IT is because it must work
to some degree!!! I've read this..... You're reading this......
Ask yourself...How many other people do you think might also be
reading it???

HERE'S THE PROGRAM:

"THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Would you like to make thousands of dollars, quick, legally, with NO
CATCH? Then keep reading....please take five minutes to read this
article it will change your life, just like it did mine. It's true!
You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!

I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
interested, keep reading; if you're not, I apologize for wasting your
time.

Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar
to this that said you could make thousands of dollars in weeks with
only an Initial investment of $5! So, I thought, "Yeah, right, must
be a scam", but I was curious, like most of us, so I kept reading.
Anyway, it said that you send $1 to each of the 5 names and addresses
stated in the article. You then place your own name and address in the
article at the bottom of the list at #5, and post the article in at
least 200 newsgroups (there are thousands). No catch, that was it!

So after thinking it over, talking to a few people first, I tried it.
I figured what have I got to lose except for 5 stamps and $5, right?
Well, guess what... within 7 days, I started getting money
in the mail! I was shocked! I still figured it would end soon, and

didn't give itanother thought. But then money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week and I've made about $42,000 TOTAL, and the money is still coming in.....

Let me tell you how this works and most importantly, WHY it works... also, make sure you print a copy of the article NOW, so you get the informatoin off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:
STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 4." Get five $1 bills and place ONE inside each piece of paper that you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is PERFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 to each to the following 5 addresses:

1. D. Dennis
3675 S. Rainbow Blvd. #107132
Las Vegas, Nv. 89103

2. Richard Schmitt
P.O. Box 17564
Covington, Ky. 41017

3. J. Calderon
7815 Galaway Bay
San Antonio, TX 78240

4. G. Williamson
357 Hewitt St.
Trenton, NJ 08611

5. Tuomas Paasovaara
Kettuvaarantie 80
80260 Joensuu
FINLAND

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above c: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY... HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE", A WINDOW WILL OPEN. TYPE YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN A NEW NEWSGROUP YOU ONLY HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS

THE MINIMUM. The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY STEPS THERE ARE!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!

Out of every 200 postings, let's say I ONLY receive 5 replies, which's

actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not includingyours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!

When your name is no longer on the list, you just take the latest posting appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars to see if it really works? I think so.....
People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

**By the way, if you try to decieve people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much. Someone I talKed to knew someone who did that and he only made $150 dollars, and that's AFTER seven or eight weeks! Then he sent the 5 $1 bills, people added him to

their lists, and in 4-5 weeks, he had over $10K.

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!"

For the last couple of versions CAB no longer needs the long file names! Starting with 1.5 it handles large caches better also as it makes 26 folder a-z, this way it takes a lot longer to get up to the 400 file limit that my favorite file selector has (UIS II), of course if you want to find something by name in the cache you have to use the cache tool, which looks in the cache file and translate it into the names of the various sites you have connected to and lets you move, save or whatever, the various files associated with each site! Sorry, can't help with problem no. one!

I still stand by my statement! He was asking if it would work in the
parallel port on an Atari machine! Does anyone have any idea of the max
speed you can get out of the rom port?

Anyone have plans to stack some cheap jaguar 64 chips to make a low cost workstation with a 64bit OS? These chips must be only $50 each, you could put up to 8 on one machine for a far price and powerfull machine! Only problem is the OS, maybe MagiC64? Then there is the software problem, no applications at all. never mind.....

>Yep, I couldn't so here it is: BASE64.ttp. Works a treat for me, I run it
>from mupfel in the vt52 window.
[snip uuencoded and messed-up BASE64.ZIP]

NOOOOO! No more binaries in discussion groups! Two in Atari groups
this day... :-(The Netiquette states _NO_BINARIES_ here. Upload your file
to an FTP site and announce it here with a pointer...

The Netiquette is RFC 1855 and can be found as gzipped text at:
<URL:ftp://ftp.cnam.fr/pub/Rfc/rfc1855.txt.Z>

And your binary posting is messed-up and unusable due certainly to NOS
post-percent bug. To avoid it just edit the file SPOOL/MQUEUE/xxx.TXT
before posting, and replace each single percent sign "%" by two. Or post
base64 encoded files, it doesn't use this character. Or even better use
NOS 0.45, the last NOS update by Mike de Petris, the post-percent bug is
corrected.

But please no more binaries here!!!

GRRRR! Bruno.

Help!
Does anyone out there have experience with CS-TeX that I could correspond with? I have set it up in my TT (4+4) with an HP deskjet 400. After I compile a file, and it displays fine in the screen, when I try to print directly from TeX, it prints a few lines and bombs. If, OTOH, I redirect output to e.g. output.lj, and then print that file, it works just fine. Anyone have any ideas???

5321. Problems with NOS/PPP and 'kick nntp'

Newsgroup: comp.sys.atari.st
Date: 1996-12-20 00:00:00 UTC
From: aa728@FreeNet.Carleton.CA
Message-ID: <59d8a3$a0g@freenet-news.carleton.ca>
Source record: 131454
Cross-posted to: ncf.admin,comp.sys.atari.st

I've _finally_ gotten a PPP connection with NCF using NOS (0.45), the 030 version for the TT/Falcon. When I try to 'kick' the news, I get the following:

```
.....................................................
- sl0 dialer: cwait 30000 "oix :" "NO CARRIER"
- sl0 dialer: wait 1000
- sl0 dialer: send "2\r"
- sl0 dialer: wait 30000 "name: "
- sl0 dialer: wait 1000
- sl0 dialer: send "aa728\r"
- sl0 dialer: wait 30000 "assword: "
- sl0 dialer: wait 1000
- sl0 dialer: send "xxxxxx\r"
- sl0 dialer: wait 30000 "to PPP."
- sl0 dialer: wait 1000
134.117.136.21:119 - NNTP Connect failed: timeout
134.117.136.21:119 - 480 Authentication required for command
134.117.136.21:119 - NNTP Error while getting NEWNEWS (response was 480)
134.117.136.21:119 - 480 Authentication required for command
134.117.136.21:119 - NNTP Error while getting NEWNEWS (response was 480)

.....................................................
```

Now, if I'm reading this right, I'm connecting to the DNS (134.117.136.24) OK and it is telling me that I have made some kind of connection with the news server, news.ncf.carleton.ca, (the 134.117.136.21 part). I also know that when I use Netscape on the PC (spit on the floor!) I have to send my username/password again. OK. The question then becomes how do I do that from NOS? Is this what PAP is? I'll have to do the same thing for POP mail when it comes.

```

:

I've done it many many many times!
I simply used NeoDesk to make a NPI that would open nos inside a
GNVA_TOS window. The NPI will allow you to pass a variable to NOS
telling which directory to find its files.

Hi Ben,

Yes, I'd like to have to have the program too, and I'll gladly ftp it to some sites, since I've been searching for it myself for a while, without success.

Maybe someone else has already mailed you, then could you please point me to an ftp site?

Greetings,

Tomas

Checkout the TUW-TCP archive (should be on most German sites).

It has a circuit diagram for a cartridge port adapter that allows a PC parallel port adapter to be used. They developed this because of the Atari parallel port.

AFAIK, parallel port cards are expensive.

You can format your internal IDE drive with HDX or SCSITOOL. You can
make the drive bootable with any hard disk driver package.

MIME was expressly designed to handle all that transparently. It's a
pity not all mail processors and mail hosts recognize and implement
its rules. This is partly due to the fact, I think, that the complete
set of MIME options and rules is a convoluted tangle, and that most
hosts continue to work with old systems.

>Hmmm...do you know of any good ones? Also, a little help getting started (even
>to get a help file) would be nice. Thanks.

Here is a list of all Atari ftp sites. I don't know if it's quite
up-to-date. If you want the most recent one, contact Hallvard
Tangeraas <hallvart@sn.no>. In this list you can find all the ftp
sites that have their own mail-server. Send a mesage with a blank
subject line and `HELP' in the body of the message to those addresses,
and you'll receive the complete set of mail-server commands. One of
the biggest Atari ftp sites with a mail-server in Europe is
ftp.tu-clausthal.de. Send a message with a blank subject line to its
mail-server. Type in the body of the message:

```
BEGIN
SEND /pub/atari/Index.complete
END
```

and you'll receive a complete index of all the Atari files in ASCII
format. You can then pick and choose and have any file sent to you by
email. Default size of each packet is 60K, but you can set your own
size.

There are also independent mail-servers that can send you files from
ftp sites that don't have their own mail-server, but I don't know
their addresses. They're listed in every introductory text about the
Internet, though.

I am staying... I am not leaving the Atari place at all... sure, i use my Mac more now than before.. but that is because I have MagiCMac installed. ;-)

The stuff I am selling is because i don't use them anymore.. emulators for the ST are no use to my Falcon or Mac.. I do not program anymore so no need for programming languages.. music stuff.. is for the ST and is no use to my Falcon or Mac... as for the mags.. they are extras that I have.. collected during the days when I was trying to get a full collection of Atari mags. i still have a full set of ST World, ST Format, ST User, nearly full set of ST Applications, full Atari World.. and am proud of the collection. That full set is not for sale.

> you. Mind you, I said that when you left HENSA. Unfortunately, I was
> right :-(.

Thank you for your kind comments. Life for me hasn't been the same either since leaving hensa. I had more time to do things Atari when i was there... but life must go on. My interest now lie in communications and that is where I am heading. however that is not to say that I am leaving Atari behind. Far from it. I am streamlining but not leaving the scene. As for hensa.. I have to leave that behind.. they do have another person there looking after the Atari section and I keep sending them files for inclusion.. but they don't seem to get added. There is a lot of other work to do there too so i can't blame them.. their main concern is to make it easier for searching and retrieving files..

Do keep an eye out though as I am planning to have cyberstrider.org house PD and shareware Atari software... it might take a bit of time but it will be there. I have been quiet as a lot of other things have been happening in my personal life.. but things are definitely settling down. There will be a new look CyberSTrider in the new year.

Merry Christmas everyone.

Yes it should be recognised, provided the following are true:-

Your disk drive is double sided (some TOS 1.04 machines were not).

You are using the desktop formatter, or any other formatter which claims to produce DOS readable disks. I don't think sector skewed formats work on the PC.

If your drive is SS, you will have to install a driver on the PC to read it.

Hey Andreas I know you are now writing your program to operate under
Win 95 so what will be your excuse on why it crashes on a PC ? You're
acting a lot like Bill Gates in mentality when confronted blame the
hardware and not your product . What do you run Magx5 on ? If for one
you would not of used any illegal addresse calls maybe there would be
more stability . As a Falcon owner who has purchased your OS to say
I'm happy with a piece of software that works at best 4 out of 10
times I would have to say to you that I am far from amused ! And while
I'm at it why is it in GEM my Midi software works flawlessly but as
soon as I use Magx even with 14 megs my perfectly good software won't
run under your OS ? I would appreciate an answer from you as even Bill
would at least reply with some crap answer to hide the BUGS in his OS
ie: Windows 95 !

5344. Cattamaran installation?

Newsgroup: comp.sys.atari.st
Date: 1996-12-21 00:00:00 UTC
From: dipching@ping.be
Message-ID: <851283508_OASIS_@ping.be>
Source record: 131332

Is there anyone who can help me ? I have bought one second hand
CaTTamaran rev. B and the problem is there are no more color
wires/clips connected to it. Then it becomes virtually impossible
to connect it to my TT, even with the installation manual (file
on disc, because I haven't received any book with it.
If you want to help me, don't forget I have only the board with
its 6 letters A, B, C, D, E, F. I only want where to connect
these 6 points in my TT.

Source record: 131333

I have a couple games for sale, which I'm making room for space. Consider
it my Christmas gift to all of you :)

Loose: $5 each

Q-ball
Moonwalker
Real Ghostbusters
Millennium 2
Death Bringer
Silmarils
Licence To Kill (not STe)
Eco (not STe)
The Bard's Tale (not Ste)
Phantasie II
Populous w/Promised Lands (not STe)
Silent Service
Missile Command
Ice Hockey (not STe)
Dragons Of Flame
Arctic Fox (w/ command card)
Rogue (includes a companion disk to enhance gameplay)

Packaged: $7 each

(Some may have a box but all have instruction manuals)

Chaos Strikes Back
Battleship (boxed)
Trail Blazer
Paladin
Questron II
Lombard Rally
Test Drive (boxed)

Orphans $2 per disk

(These disks are for replacing the ones you have lost)

Baal Disk 2
Captive Disk 2
Street Fighter Disk 2
The Duel Boot Disk
The Duel Master Disk
{The Duel needs a code wheel which I sadly cannot provide :(}

Rock 'n Roll Disk 1 (Can play first few levels though)
Heroes Of The Lance Disk A

For any offer, please my e-mail me.

Here are some application programs availible for sale. I have no need of
them, but there may be someone out there who does...

Loose: $5 each

Clip Art! (Christmas Graphics)
Quick Tools Vol. 1
Hard Disk Toolkit (Backup)
Replay Professional (All 3 disks)
Flash 1.1
A-Calc Prime
Font Design Partner
ICD Boot Disk (useful for HD's)
Codehead Utilities
TurboJet (2 disks)

Packaged:

Hard Disk Toolkit $6.00
(w/ manual)

Data Diet v. 2 $7.00
(includes version 1 - both include manuals)

Newdesk Icon CPX $7.00
(w/ manual and Xcontrol Panel thrown in)

Cubase Lite $25
(w/ manual)

Publishing Partner $15
(boxed w/ manual - powerful DTP package)

Script WP $15
(boxed w/ manual - power word processor, high rez only)

Orphans: $2 per disk

(These are for replacing disks that go with hardware devices)

Crazy Dots
Img Scan
Discovery Cartridge
Surreal-Time Clock
Spectre GCR

If interested, please e-mail me.

Eric Noss

In Europe they're actually *very* difficult to get.
If you buy one, check the [control]- key. This one is sometimes broken
and virtually not repairable[!].
However, MegaSt- and MegaSte keyboards are 100 % compatible.

>whether it will allow write access.

Nope. The diskdrive blocks any write-attempt through hardware if the
disk is write-protected. This hardware is not in the diskcontroller
but in the drive itself. There is *absolutely* no way any
software-based solution -including viruses- [or even the hardware on
the motherboard !] can circumvent this.
The conclusion is: somehow your diskdrive is either defect, or
jumpered to disregard the write-protect tab.

Don't feel bad, a lot of times they don't recognize disk formatted on other pc either! Make sure you have a Double Density Double Sided Dsik drive, Format only to 720K, that's 80 tracks 9 sectors per track! Some PC's won't even recognize this unless you use something like dcfmt32 (dcformat ver 3.2) to write the msdos boot sector to the disk! Easiest way is to format a DDDS disk in the PC under dos and use that on the ST! A lot of things should be and could be, but the PC's can be incredibly stupid about certain things!

Hi everybody.

I'm trying the new CAB.OVL (1.21) and have come up against a snag. All works fine whilst online, then if you go back offline to read some of the pages just downloaded, you get the status bar saying "Error #312" and the page comes up as blank.

Any ideas on how to fix this, or is this a bug? Or is it me?

TIA

Could be a head alignment problem with the ST or the PC
if the ST can't read the pc formatted disks and the pc
won't read straight st formatted disks. Wayne

Does the ST read commercial disks ok? Or just disks
written by it? (Although I have one mega drive that
reads its disks fine and commercial disks fine but if
I try that disk in any of my other Atari drives it
will get read errors. I'm guessing its just barely
misaligned but just enough to cause other disk drives
problems.) Wayne Booth

I have recently started using Magic (version 5.03) and have noticed that the screen redraws are poor to say the least.(Even with NVDI 4)
This appears to be because the blitter is disabled. Is there anyway to re-enable the blitter to speed up the display?

Another magic related problem I'm having is that sometimes when I load programs theyu crash with an exception error. Then when I load them at other times with exactly the same set up they don't crash. The main programs that this seems to happen with is Everest, ST Zip and LHA-Shell. Anyone know why this is happening?

My system is a Falcon 030 with 4Mb RAM

>accessing the internet with your PC at the same time.

You may already realize this but it wasn't stated above so just
to try to help out in the search for a solution.

The real problem with the above solution is finding the non-existent
IP address to assign. It will have to be in the 4th set of numbers of
your IP address. The others are used in routing in the outside world
and changing one of them would make you packets go wondering off to
someone else's net/subnet. IP addresses are registered - and your
machine, if it has an IP address, should be the only machine on the
planet with that address. Your local provider is the one who
registered the set of IP addresses that they will assign to users.
A better and working solution might be to contact them and ask for
another IP address. (and yes, they will probably charge you something
for that service. Its one less customer they can service and they
did have to pay for their run of IP addresses.)

Hark the Herald Angels SCREAM no one hears the words they sing for neath the boughs of ever green midst the wraps of red and sheen tied with bows of satin white there's sorrow cradled that slumber night.

There were parcels large and some petite there was one quite long and another smelled sweet Michael or Brother others did say simply Sister or Susan and some of the ones were for Dad or for Rueben.

Now all the paper is crumbled and torn not one gift is left still adorned some bows are saved for another year most are battered and tattered, we fear and all the while; during joyful festivity no VCS, no 8-bit, no Antic, no ST.

In years gone by; not all long ago Mount Fuji stood tall; its pride aglow it inspired and nurtured millions of souls it marketed great things and set all the rules there were games and computers and printers and mice there were joysticks and modems and drives that were nice.

Yet lo in the present there's no present to be that's wrapped with the factor of fun from Atari this year Jack The Santa; J.T.S. to be quite sure took funds once marked for gamers so pure and with disk drives that ship pairs at a time there's no money for gamers, not hardly a dime.

Yet Christmas is perfect to remember the past the Tempests, the Asteroids, the game names that last and no one demands to know where they have gone the silence just deafens as new systems move on and through all, we shall treasure that precious green tree next year when J.T.S. absorbs the tree industry.

Donald A. Thomas, Jr. (75300.1267@compuserve.com)
believing that the tremendous success of the today's
systems has meaningful roots that should not be forgotten.

I wonder if you're thinking of GARBCOLL, Martin? This looked useful to me so I picked it up. It's all of 36 bytes long and just does Trap 1 with opcode 0. This is the old Pterm entry. I'm not convinced it does anything at all for fragmentation.

If yes you can use M_player. You can get M_PLAYER from cnam.fr.
Load M_PLAYER and press alternate and click on Go.
If you loaded an AVI, FLI M_PLAYER will save TGA file of each frame
in numbered order. After you have the frames, load run M_Player again
select a BAT file (MOV script you create) and press ALTERNATE and click
{AYER will ADD the AUDIO file you named in the BAT file and creatthe MOV!

I will include here a BAT file I created. I hope you have fun with it.
The program works well , and I plan to register soon.

Guitarra.

BAT sample

5382. PageStream

Newsgroup: comp.sys.atari.st
Date: 1996-12-22 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <851275829@acpu.com>
Source record: 131283

To all those who responded to my post asking about PageSTream's regrettable insistence on rendering the page before printing each copy, I thought I would sum up. Apparently, the difference is that the LaserJet (and I am sure other laser printers) /do/ print multiple copies from a single rendering, and the DeskJet (and other inkjets) do not. This does not seem to have anything to do with memory, either in the computer or the printer. I could be wrong on this point; does anybody get multiple copies from a single rendering with a DJ and a 14Meg Falcon or a 16M TT? The DJ500C comes with a 48K buffer, and will only support 512K RAM, which is /not/ used as extended printer buffer, but as a place to store soft fonts. (I am getting this from the DJ manual; don't flame me if my inferences are wrong :).

I will be experimenting soon with 'Magic Spooler', which is a software print spooler that seems to be very versatile; if this produces good results, I'll let you know. Somehow, I kind of doubt it.

At least one respondent suggested a hardware print buffer; if I can find one for sale, I'll check that out, too. Anyone have a suggestion on where to buy one?

I should mention that I have gotten good results by printing to a file and then printing from the desktop (show-print-cancel) using a CodeKeys macro to do multiple copies. This /might/ allow the computer to be used for other things if Geneva or MagiC can run GEM in a window. Someday, I'll find out. I also expect to try LPrint soon, in a similar way (desktop print), but I have very little hope that this will work - seems to me I tried it a while back with pretty ugly results.

Of course, there *is* always the sensible solution - buy a LaserJet. Does anyone know whether the Atari Laser printers will print multiple copies from a single rendering in PageSTream? I might buy one of them instead.

Thanks again to all who responded! This is a super newsgroup!

|
| Anyways I have downloaded the internet suites for the atari
| to my PC, so my real question is how do i get the files that
| are on my PC to my Atari?!?!?!
|
The easiest way, if the files in question are less than 720K, is to
format a 3.5" disk (DD, not HD) to 720K on your PC and use it to transfer
the files. Your STe can read/write 720K diskettes without any problem.
-
If you want a way to transfer larger files, you could always use a null
modem cable, and a terminal program on both machines, or better yet, the
freely distributed program "Ghostlink", which converts your PC into a
"server" for your Atari.

In a message dated 12-21-96, swilling@seacoast.com wrote:
|
| I'm lloking for an old atsri st game called carrier command,,
| I want to use it on my pc any ideas how to convert my st version
| or did they ever make this for the pc platform, and if where
| to get it.
|
Yes, they did make it for the PC. Unfortunately, as to where to obtain it, I have no suggestions, other than perhaps advertising for it in a pc software or game newsgroup.
-
While ST emulators are available for the PC, the only two solutions I am aware of (GEMulator and MagicPC), are commercial and much more expensive than the PC version of Carrier Command would be.
-
-
BTW, Carrier Command is great...one of the very few games I have ever gotten, and the only one I have kept. I just wished they had come out with a two-player modem or MIDI-network version that allowed another person(s) to control the other carrier.

>Only the graphics chips on the Jaguar are 64 bit, which is also true

It's true that the RISC chips are 32 bit (one of them can load/store 64 bit values, though) and on top of that they would probably be almost impossible to use for a normal computer.
The 'caches' have to be filled by hand and most people seem to agree that it's impossible to run code directly in main memory.

There are far better RISC chips around for normal computers.

>of the TT and Falcon.

The TT video circuitry might have 64 bit access to ST RAM, but that could hardly be called 'graphics chips'. I mean, there's not even a blitter in there.

On the Falcon the video only has 32 bit access, while the processor and blitter have _16_ bit...

The Jaguar blitter and object processor are of course also _far_ better than the stuff in the Atari computers.

It works fine in VGA 16 colours on my TT030 ('030 CPU).

I've not noticed this problem. I run Magic 55.03 on a Falcon with 14meg and
NVDI4. Screen handling works a treat!! Certainly haven't noticed the blitter
being disabled!

Welcome to the 'crappy' Falcon owners club. (See re:Sweet Geneva).
Happens all the time on Falcons, I'm afraid. And Andreas can't be arsed to
to fix it!!! It's your sub-standard Falcon (as far as he's concerned).
Live with it, or try something else :(Personally, I'm loathe to shell out
MORE money on Geneva etc. Magic is 'supposed' to be Falcon compatible!! Pah!

Message-ID: <70602338_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 131292

Just thought I'd start a new thread with a more appropriate tile than 'sweet geneva'!

With all the problems that us 'crappy' Falcon owners are suffering from, I thought it was about time Andreas made another momentous comment!

He's been very quite whilst everyone with a Falcon and Magic has been complaining of the same bugs!!

A) Andreas please comment!!

B) is ANYONE with a Falcon running Magic without the following bugs:
Failure to boot: Fatal error in Gemdos!
Frequent memory problems. 'Destroyed memory block'!
JPEGD locking up.

Maybe it is just us unlucky 'few' as Andreas suggests. But I think not!!

Please respond to this thread Andreas. We've paid good money for MagiC and I think we deserve some SUPPORT!!!! Not just arrogant dismissals!!

Gary

I'm sure I saw mention of some ethernet cards, as mentioned in another post, but it occured to me now that these were probably VME cards and therefore unsuitable for the Falcon.

>: The reason I ask this is that I talked to our landlord

>etc...) that can treat a serial port as a PPP connection in order to get
>MiNTnet to talk to it from the other end...
>
>Never seen this done, although it should work in theory...

There might be a problem with this. I tried to do it myself (having a TT030 on the internet and a MegaSTE connected to the internet via the TT030), the idea being that two people could access the internet at once. Since I only have one account with my ISP and one IP address, however, I can only have one machine truly on the internet. The other one, while it can send packets, will never receive them since I cannot assign any real IP address to it. At the time, I was unable to find a way around this.

I suspect that by assigning a non-existant IP address to your PC and the real one to your Falcon and setting the routing up right on both machines, however, it might be possible. This would mean that when you were accessing the internet with your Falcon you could not be accessing the internet with your PC at the same time.

If you could get it to work it would be a great speed improvement over a modem. And if you were not the only one using the ISDN line, you might find that connecting your Falcon via the PC would not cause any slowdown compared with the normal rate anyway. You should be able to get around

100KBPS over a serial line between your PC and Falcon. Assuming you are using a 28K modem, this would be more than three times faster. And this is not much slower than 128K ISDN.

I don't know how the person you are referring to does it, but both MiNTNet
and Linux can be used to network any number of Atari (and other brand)
computers, and no doubt there are other ways too.

The only problem I find with them is that they are not laid out very well.
Some of the files listed in the index just don't seem to be there at
all. And there are directories marked "extras" and such which then have a
complete directory tree similar to the rest of the CD under them, all of
which must be searched through to find what you are looking for.

At least, this is my experience.

5406. Outside VM + MiNT problems - please help

Newsgroup: comp.sys.atari.st
Date: 1996-12-22 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GLWJBAXKUp@tos.ak.planet.gen.nz>
Source record: 131360

I am having great difficulty getting Outside 3.4 to work with MiNT on my TT030.

I tried the demo before I purchased the software, and was unable to get it to work stable with MiNT. I was assured by Computer Direct, however, that this was because the demo is set in a very un-optimum configuration and buying the full version would solve the problem.

So I purchased the complete Outside version 3.4, but after a number of months I still have been unable to get it working in a stable manner with MiNT. Generally I can't use the machine for half an hour without a crash requiring a reboot occuring.

These crashes only occur when I use Outside and MiNT together, not when I use one or the other.

I normally use FreeMiNT 1.14 (I turn off the built-in VM when I try Outside of course) with MiNTNet 0.90, MiNTOS 1.4.1 and standard Unix tools. I have tried various AES versions. In all cases the problem seems to be the same.

* The bourne shell (sh) just doesn't want to work at all with Outside. It will crash immediately after being executed. Although I forget now the exact error. I believe it was one of the following: Address error, Bus error or Illegal instruction error. This is the only clearly defined problem - all the others occur apparently at random.

* Seemingly at random, but usually when VM access is occuring, the machine will just freeze - the mouse will not move and reset from the keyboard does not work. Often, the mouse will move in a jerky fasion just before the final freeze occurs.

* Seemingly at random, but usually when VM access is occuring, an alert will appear, "Your output device is not receiving data". Choosing "Retry" just causes the alert to reappear, and choosing "Cancel" results in an error that looks something like "Error reading/writing sector nnnn, press any key to reboot" where nnnn is a number such as 1234. At this point, pressing any key usually causes a reset although sometimes the hardware reset switch must be pressed.

* Seemingly at random, but usually when VM access is occuring, an error message appears that looks something like "Error reading/writing sector nnnn, press any key to reboot" where nnnn is a number such as 1234. At this point, pressing any key usually causes a reset although sometimes the hardware reset switch must be pressed.

Apart from the problem with sh (which makes running of /etc/rc during bootup very difficult), the other problem all occur apparently at random,

but generally I cannot use the machine for more than half an hour before one of those problems occurs.

I spoke to the author of Outside and was told that there are a number of people in comp.sys.atari.st who successfully use Outside with MiNT. Last time I posted this question here, the only replies I got were from people telling me that they also have the problem.

So I hope that one of these people who does have it working will be able to help me with this problem.

I have an Atari TT030 machine with 4MB ST RAM, 4MB TT RAM, 850MB SCSI hard disc drive. I have tried all the Outside options in various combinations, I have tried adding various software to the OUTSIDE.INF file and I have tried setting just about everything to load and malloc from ST RAM. Computer Direct even "down-graded" Outside to version 3.3 for me, but the problem was still there. In other words, I have tried almost everything imaginable, but the problem always occurs just the same.

(In case you wonder why I don't just use the FreeMiNT 1.14 VM: I do use it, since it is much more stable than Outside. But even then it is not stable enough for practical use, so I am looking for a better option.)

Any suggestions on how to avoid this problem would be much appreciated.

I have just purchased second-hand Phase 4: Phoenix/Xenomorph 2.00, Chronos 1.30, ANM Link, Cyber Sculpt and some other related utilities.

I am interested to speak to other users of this software in order to better learn how to use it, get the most out of it etc.

In particular, I would be interested to hear from anyone who can help with the following questions:

Cyber Sculpt:

* I cannot get Cyber Sculpt to work on my TT030 in VGA 16 colour resolution. The object/template manipulation dialogs are drawn off the edges of the display, and selected objects are drawn incorrectly with colourful "garbage" appearing in the upper half of the screen when such objects are drawn.

I was told by the previous owner that the software would work in this resolution, however. Any ideas?

Phoenix/Xenomorph:

* When I have, say, 50 objects which I want to assign the same texture to, it is very tedious to use the "Copy object" button in the solid texturing editor to put the texture onto each object. In addition, this only copies the solid texture and not properties such as specular reflection parameteres and transparency. In particular, I would like to be able to assign a texture to all those opbects and easily change the texture at a later time without changing the texture for each object individually.

* When I have one complete item, for example a house, that is made out of several individual objects, it would be useful if the entire house could be manipulated as one object in the object positioning dialog. I know I can just select all the objects and move them about, but this is very tedious when several such "composite objects" are overlapping.

Is there any way around this?

* It is very slow managing complex objects or large numbers of objects in the object positioning dialog, since the entire view must be redrawn each time an object is changed. It would be much more sensible if only the area affected by the change was redrawn. Is there some way of avoiding this difficulty?

ANM Link:

* I cannot find any documentation on ANM Link. Is this because there is no documentation, or do you think the documentation was accidentally left out

of the package sent to me. Either way, how is ANM Link used?

Any help on the problem mentioned above would be much appreciated. And even if you can't help but use Phoenix, Chronos or Cyber Sculpt, I would be interested to talk to you anyway.

5408. Lexicor email address/WWW page URL?

Newsgroup: comp.sys.atari.st
Date: 1996-12-22 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GLWJBAXOUp@tos.ak.planet.gen.nz>
Source record: 131362

I recall seeing a WWW page for Lexicor some time ago, and have found several links to a Lexicor WWW page around the place.

Unfortunately, all the links are out of date, and I am unable to find the current URL for Lexicor's WWW page.

In addition, I found an email address for lexicor: info@lexicor.com. Unfortunately, the host "lexicor.com" does not appear to exist. Does anybody know what Lexicor's current address is?

Any help would be appreciated.

```
The Falcon's internal IDE support is indeed compatible with EIDE drives. The
EIDE
standard is size-inspecific; many 2.5" hd's are fully EIDE. EIDE has nothing
to do
with specific connector hardware- it is the scsi drives that require new
connectors
(60 pin for scsi-III).

What did Scsi Tools do for your IDE drive?? Any clue why HDD or HDX choked on the 1gb hd? Using ICD Pro drivers I had no trouble partitioning a 1.08gb Micropolis or an 850mb Seagate.

BTW that 850mb Seagate (ST 5850a) actually fits right into the Falcon case as it is 4x5x0.75 inches in size.

"I know 1st Guide can show MPEGs in a window, but I have no idea about B frames and such."

-It is true 1stGuide will play MPEG movies in a GEM Window, but it is.....SLOW! I use MagiCMac on a Quadra 660AV which has a 68040 and playing MPEGs in 1stGuide is pointless, it is like watching a slow slide show. I think you should look at GEMMPEG it is much better for MPEGs, although it does not have a GEM Window it sets the rest of your screen to black.
If you have a Falcon you can use the other MPEG player called MPEG Fever, look on the UMICH mirror on ftp.toad.net in "graphics" then "mpg" it is in the same directory as GEMMPEG.

I just use GemSpool. It prints the entire thing to harddisk (like windows)
and then you get your computer back while it prints from the harddisk file it
created. This works great for me on my TT030 with pagestream. No if only I
could get pagestream to correctly redraw the screen correctly after switching
windows...

Get a LINK II plug. What it is that it is the normal dma cable with a
SCSI plug so you can then hook up SCSI devices. I have mine hooked up
after my printer (I have an Atari SLM804 lazer printer) and it works
great. I have a 100mb one and a CD ROM drive. Highly recommended, so
you also don't have to worry if you screw something up (even experience
people like me screw up once in a while).

: myself, with maybe a little help from Best Electronics!

The problems that appear with MSTE and TT keyboards are generally failures in the Keyboard Mylar. One cracked trace on this flexible circuit and keys will cease to function. I have had limited (short lived) success repairing one of these with a conductive ink pen, but as I mentioned - this didn't last very long.

The better solution is to call Best Electronics and order a TT keyboard mylar for $30.00. Best can be reached at (408)243-6950

Incidentally, I hear that Best Electronics has something like 3-4000 Atari parts in stock.

According to the HP DJ 800 Series Software Developer's PCL Guide, Deskjets do not support the "multiple copy" command, no matter how much onboard RAM they have.

As for the SML804, I looked at the PGS driver source code, and it DOES support multiple copies (automatically).

BTW, I have a standing offer to develope new PGS printer drivers by request IF I can get the needed documentation AND the requestor is willing to do a LOT of testing. I have already developed drivers for the PB9500 and the HPDJ800 (the former sets the margins correctly, and the latter supports all 4 raster compression methods as well as 600 dpi in B&W mode).

Also, did you know that PGS printer drivers use the "Special" entry in the "Configure Printer" dialogue to specify paper types? Code words include "executive", "letter", "legal", "a6", "a5", "a4", "b5", "hagaki", "4x6", "5x8", "commercial", "international dl" and "international c6" for the DJHP800 series. This primarily affects the print margins.

First, let me wish all of you - even the PC-only users <G> - a Merry Christmas, a Cool Yule, and a happy and prosperous New Year (the last especially to Atari support vendors and authors!).

Spencer Davies (Spencer@mettav.demon.co.uk) wrote:
: Out of the ether, the following was mentioned by rhall@hsl-ltd.demon.co.uk...:

: >> PS all ST owners can suck my DICK!!!
: r> I see your an Intelligent Chap!! In other words a typical PC owner!!
: Please don't tar all of us PC owners with the same brush!

: I also own and use a TT!!! :-)

On the universality of complete gits:

Every platform - yes, even the ST - has its share of fools and losers. However, given the simple percentages, they are both fewer in number, and much easier to ostracize, on the ST and even the Amiga. "Why?" you ask? (Go ahead, ask - I'm waiting!)

Well, I'll tell you:

Given a pool of perhaps 100,000 Atari users worldwide (a conservative number, but perhaps a generous estimate based on the number who are 'netted), if 1/10 of 1 percent of all computer users are complete and utter fools, then there are 100 gits using the Atari systems. (These numbers are equally valid for the Amiga, BTW - I made 'em up, so they're equally valid for darn near any platform except the MickeySoft systems <G>). Given the difficulty of setting up internet software on any platform (you have to be able to follow directions), perhaps 1 percent of the idiots can actually get connected. That leaves us with just 1 unadulterated a**hole using an Atari (or Amiga) And getting connected to the popular newsgroups. Actually, he's using a Mac and we all know who he is.];^)

Now, consider the Windows-based PC. There are probably more than 100,000,000 of these boxes currently in use, and just considering AOL, there are more than 1,000,000 of them connected - however tenuously or cluelessly - to the Internet. One-tenth of 1 percent of 1,000,000 is 1000 morons (again, this is considering only AOL - multiply by at least 100 for the entire Internet). Now, let's assume that only 1/10 of these morons (whom are /already/ connected) actually figure out how to post flamebait. That means that, on any given day, 10 articles are posted by complete gits (even if only the AOL idiots are doing it, and even if they each post only one message). Thus it is obvious that, due to sheer numbers, the quantity of brain-dead losers on AOL alone exceeds the quantity of losers with Atari/Amiga systems world-wide, by a factor of at least 10 to 1. IT is

probably closer to 1000 to 1. Anyone who doubts that number should look in the "control" newsgroup and count the number of spams that are cancelled every day (it doesn't even consider the number that don't get cancelled - again, probably 1000 times more than the number that get caught).

So, since the idiots are so plentiful, and Internet Service Providers suffer more from insufficient bandwidth than from too few customers, one may reasonably expect flaming gits to be summarily ejected from Demon Internet, Teleport, and even AOL, if just a few complaints are directed to the proper authorities (usually abuse@flaming.git's.domain, although postmaster@same.place should have the same results).

Consider that next time you see a bit of flamebait outside of alt.flame - the ISP doesn't need the idiot NEARLY as much as he needs the ISP. Tell his postmaster - and wave bye-bye to the jerk.

Merry Christmas!

->Toad's prices for used ST equipment are way too high, IMO.

An individual can always sell for less than a company because an individual has no overhead from advertising, staff, inventory, etc. Toad has always been a loyal Atari supplier, and their prices, while prehaps not always the lowest, have always been competitive.

I, for one, would gladly pay an extra $10 on software or $100 on a computer if it would garantee that Toad would be around for a Christmas '97, '98, '99 sale.

That's what he tells me it needs, a new mylar! What I wanted to do was to temparily connect the keyboard(the whole keyboard) from a dead ST to a telephone cord with the right kind of jack on the other end to plug into the TT. I need to know which of the connectors on the TT is ground, which is 5v and which ones are the signal in and out lines, so I can figure out which lines to hook to the plug on the ST!

Yes, there's a check-box in the System Information CPX: select it and
save the CPX configuration. And yes, it does do wonders for the screen
redraws!

>Another magic related problem I'm having is that sometimes when I load
>programs theyu crash with an exception error. Then when I load them at

Beats me: I've had trouble with some other programs but those three
have always worked flawlessly under MagiC 5/NVDI 4 for me. Though I've
only been using this stuff since September. I'm using a 4Mb STE,
though: this might be Falcon specific, I guess.

Source record: 131191

I know you must be laughing off your rump just from reading the header, but I really do want to know...can I run STiK applications like Newsie on a 2400 modem. I really am trying to find a 14.4K modem for my ST but it's so hard. I hate having to send my ST off for a modem port upgrade when I may be getting a PC soon and to use a 28.8K modem without the modification at only 14.4K(19.2K compressed) is a bit of a waste.

I just want to mainly use IRC, newsgroups, and e-mail which are all text based. I don't even want to do any graphic web browsing, not without a T-1 connection and Nova graphics card :)

As it stands, I use a shell account and it's always either too slow or not working at all. I think ISP's slag off shell accounts letting them go to the pot so they can "encourage" people to buy Netscape and get more money per month.

I know I should use a faster modem,if I can actually find one for sale, but I could go with a short-term stop gap. I hav 4 Mb and a hard drive BTW

Yep...went downstairs can saw a blasted PC sitting under the tree. The
b***ard child of Billionare Bill has inflitrated my home. So I booted it
up hoping to find a deathmatch game when suddenly...

Wholly smokes!! Under the Windoze Start button, I found lots of Atari
stuff! How can this be? Some kind sole has removed the useless Micro$lop
programs to make room for emulators. Emulators to play old 2600 games
that I always wanted as a kid. I got both 8-bit and ST computers on my
virtual desktop each in their own windows. And I even have a program that
transform a modern computer into an arcade machine to play Battlezone and
Asteroids, even Centipede!! Not shoddy shareware ports, but actual arcade
games.

This can only mean on thing kiddies...the New Era of Atari. Where the
A-word is no longer a company, but a community spirit to make computing
and gaming an absolute joy. No longer will the likes of the Tramiels
drive it to the ground with horrific business tactics, but bedroom
programmers still finding ways to keep the feeling alive. Atari computing
will be like the Grateful Dead concerts of the industry.

As for Atari Corp...oh, I mean the one lawyer who works for JTS passing out licenses to other game companies who are going strong. It's games like Tempest X that keeps the classics alive on the next generation systems, an honor that the Jag just pass up on.

Well, I'm rather glad that a corporation will no longer carry the fuji banner but people who actually care. The childern who grew up with 2600's and other Atari games can now take computing into the next century.

Message-ID: <59kvgt$vht@venus.plain.co.nz>
Source record: 131193

HI!
Im new to the Atari ST1040. I want to get a hard disk for it. IM thinking of buying and old PC one.
Can I buy any old hard disk for it? How can I tell whether a hard disk will be compatible with the atari?
I assume I need some kind of driver. Does the required driver depend on which hard disk I buy.
If possible please email replys to paul@francis.chch.planet.org.nz
But I will be keeping an eye on the group.
Thanks for any help.

Has anyone else been having a problem with getting onto demons irc server.
When I type in the server and the port it come up something like
"pp connection refuse/fail". Does anyone know what the problem is.
I've tried all the ports and still no luck.
It all started when demon moved there IRC server.

When I was speaking on #atari it seems a lot of people have the same
problems.
I hope you can help

From: Paul Swindlehurst <pauls@pcrsys.airtime.co.uk>
Message-ID: <32BDCD9A.76B2@pcrsys.airtime.co.uk>
Source record: 131300

I have just purchased a 520STe, and placed 4mb of memory in it, and its woking brilliantly.

I have also got two hard disk drives hanging around, a 500mb SCSI drive, and a 81Mb IDE hard disk.

I was wondering if there was any way of connecting these to the STe, cheaply. I am experienced with electronics, programming and operating systems, so I should be able to do the necessary 'donkey work' myself, but I am not quite sure where to start.

Anyone got any Ideas.

Regards

> to it. At the time, I was unable to find a way around this.

Yes, generally your ISP will probably only route to your single IP address
they assign you, unless you have a network dialup account, but they're
usually expensive.

> I suspect that by assigning a non-existant IP address to your PC and the
> real one to your Falcon and setting the routing up right on both machines,
> however, it might be possible. This would mean that when you were accessing
> the internet with your Falcon you could not be accessing the internet with
> your PC at the same time.

There is a possible way around this, and that is to use some form of
IP masquerading or NAT (network address translation, slightly different
to IP masquerade).

Basically IP masquerading rewrites packets between those of your single
IP address and those of your other 'private' hosts. More information
is available at:

<URL:http://www.indyramp.com/masq/>

Linux has IP masquerading built into the kernel I believe (at least the x86
version does) and NAT can be found in some proper routers.

> compared with the normal rate anyway. You should be able to get around
> 100KBPS over a serial line between your PC and Falcon. Assuming you are
> using a 28K modem, this would be more than three times faster. And this is
> not much slower than 128K ISDN.

MiNT-Net supports PLIP (Parallel Line IP) I believe, so in theory it may
be possible to set up a link between a PC running Linux/FreeBSD via the
parallel port, which should be able to handle about 115K I think.

This is not something I've tried mind you, but something I've always been
meaning to see if I can get working. :)

There is a range of network addresses that IANA has set aside for
private use and therefore packets addressed to them are not routed
between real Internet sites. They are:

Class A
10.0.0.0

Class B
172.16.0.0 through 172.31.0.0

Class C
192.168.0.0 through 192.168.255.0

This information was taken form ``Linux Network Administrator's
Guide'', by Olaf Kirch, O'reilly & Associates, 1995, and is also
available in RFC 1597. You can also find information on these matters
in O'Reilly's books on DNS and BIND and on NFS and NIS. I use class
C addresses without problems of any sort. Good luck.

Gustavo

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking. And something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, Local to Portland, Oregon. U.S.A. at (503)256-9974.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Best bet is to buy a host adapter such as Link II, Link 96 if they are external hard drives. If they are bare mechanism then you can add the ICD AdSCSI+ host adapter to the list. Host adapters use custom chips that woulde very hard if not impossible for you to obtain, so instead of re-inventing the wheel, go for the commercial option! Also forget about hooking the IDE drive to the STe.

I'd like to hook up a regular ST type keyboard to a TT I have been given! I have a TT keyboard coming, but it will need to be repaired before I can use it. In the mean time I would like to hookup a keyboard from a dead ST to it temporarily! Has anyone used a keyboard from a ST or STe on a Mega ST, MegaSTe or TT! If you have do this, or know how! Could you please send me info on how to match up the pins on the ST side to the telephone jack type connector on the TT side!

You need a host adapter to connect the SCSI drive to the STe DMA port.

You need an adapter to connect the IDE drive to the STe also.

You won't find any plans for these on the 'net, you are better off with
commercial solutions + these are proven to work.

Contact systems solutions in the UK for these options.

Maybe I should make my first post a little shorter.
Jennifer and Dave both walk on water as far as I am
concerned. I can only name two or three computer
dealers as concerned about their customers as
they are (the other few are all Atari dealers
as well). This is a truely unique for such a small <grin>
following as the Atari and Atari clone market has.
I'm sure it is as hard for them as it is for the
end user to see such a resource as theirs dwindle
(for the "Atari" market). I don't think them
guilty of any false advertising, only wishful
thinking as we all have had for many "new" and
"exciting" products that were announced before
their time.

Concerning their "unexperienced" and sometimes
"unthoughtful" sales people, this is not unusual
as a lot of people know when refering to the
Atari market. Go to any local PC dealer and ask
the sales clerk if the hard disk you are buying
requires bus arbatration. Ask if the modem they
are selling supports 230K DTE rates if it's not
on the box. Ask them why you need a patch to
properly load Microsoft Word onto your Mac
with O/S 7.5.5. Watch the funny look you get
when you tell them it dosen't matter if the
30 pin simm is 8bit or 9bit you want for your
Falcon memory card. Chances are you will get
refered to a Tech. Maybe one or two of the
fifteen employees in the store.

Here is where their problem lies. Being a
multiline dealer they must now hire staff
that is knowledgeable with other platforms
(however I have not tested this:).
Most Atari hardware and software is so

unique that it requires the sales person to ask
probably the only person available (Jeniffer)
for assistance. She is on the phone, with three
people on hold, Zoe wanting to go for a walk, and
Dave is working on updating the Web pages. Ray
has snuck out at 1:00 pm and won't be back.
So the response you get for wanting to purchase
a 68000 68 pin to 68000 PGA socket adapter is
probably not immediately answered (if they even
know what your talking about). So your next question
is what version of MagiC Mac supports 320*200 res?
Huh? Ok, will PC Ditto run Windows? Do I need a
three or four wire clock mod on my Falcon?
The sales clerk is totally lost and a hocky game
breaks out.

If Toad wishes to continue to support the small
odds and ends area of the Atari market, they will
either have to pay one of us for our vast expertise
to move to Md <grin again>, or train someone new
how to install a PAK 030 in a MegaST and get MagiC
and CAB working properly, and make a profit at the
same time. Unlikely. We all do have a life as i'm
sure Dave, Jennifer and staff do as well. For many
years they have provided excellent service for
Atari users. They will likely continue provide the
same service to PC and Mac users as well. For the
continued growth of their company, they must limit
the resources they spend in the Atari market.

Maybe they will continue to pick up the Atari market
when the chance and oppertuninty exist. Maybe not.
One thing is for sure, keep the "Atari specials"
email comming.

I am however still ticked about my Expose request,
but there are two sides to every story.

Mike

Tom ..... there's no reason why you couldn't use the mylar from an ST
but darned if I know how you could interface that with the TT's
telephone jack connection! The Mega ST keyboard will work just fine
with the TT, same layout etc. Best has TT keyboard mylars if that's
what you need for the one you have coming. I think they're about $35.00
or so.

Good luck!

This may not be the answer that your looking for but as far as I know, the best way (and possibly only way) to do this is to use a program like Cubase Audio that can both play midi and record audio at the same time.

If there is another way to do this with Atari computers it is a way i've never heard of.

I am trying to get ahold of the makers of the BlowUp-FX card for the falcon.

In the manual their email addresses are list the domain as:

informatik.tu-muenchen.de

I have tried mailing all three of the e-mail addresses at this site but they are returned from the above domain stating that that the accounts do not exist.

I'm hoping that someone could post a current e-mail address for these developers.

Thanks in advance,

Keith

Hi and thank's for those great instructions,

Unfortunately I still seem to be having a problem getting the demos up and running. I get a screen and everything but it is blank, white and I can't do anything. I also get 3 messages, in German, on the desktop. "Offscreen-Treeiber nicht gefunden. MCMD wird gestartet.... System wird angehalten." I don't speak German but loosely interpret the messages to mean that my screen driver was not found and the program will not load. I am using an S-3 screen driver at 1024x712 but have also tried it at 640 x 420 with the same result.

Any help that anyone could give would be appreciated. I really miss my ATARI.

Hello,

I have a real collectors piece here. A new Atari PC4 IBM PC for sale.
PC comes with all original books, disks, and box.

Atari PC4 PC
Serial Number : 124 <-Yes #124 not too many around
286-16 CPU
Two video ports (analog and digital) for MDA, CGA, EGA, and VGA graphics
1 Meg of RAM expandable to 8 Meg
32 Meg hard drive
1.2 Meg 5 1/4" floppy
Has Atari labeled MS-DOS and Windows
Atari Keyboard
Can use Atari ST 3 1/2" external floppy drives.

Unit is new and in great condition and works fine. Asking $200 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

>.

I have downloaded the same package, and have used it to connect my ST and PC
via PPP. I haven't tried in on the internet directly, but the principle's
the same.

One of the biggest problems is 4-megs RAM is really not enough for this
package, but since that's all the ST can handle, you're kind of stuck.

I get the first error also when exiting, I guess the only way to exit is to
reboot.

About the third error... Have you tried hooking any other system up to this
ISP over the same Modem/phone line? It could be a problem with the modem,
bad phone lines in the area (line noise). I doubt that it's a software problem

Why is everybody talking about Atari emulators for DOS/Mac
systems? Aren't there any talented programmers who would
program e.g. a good C64 emulator?
I may be wrong, but it should be possible to convert
some of the portable emulators available for Linux for
the Atari. What do you think?

The U.S. contact person listed in my demo copy of GemSpool hasn't answered my e-mail. How did you get your copy?

5466. U.S. Robotics Modems

Newsgroup: comp.sys.atari.st
Date: 1996-12-24 00:00:00 UTC
From: taf@io.org
Message-ID: <59o209$rpa@news1.io.org>
Source record: 131204

I just purchased a U.S. Robotics 33,600 baud modem and I have it connected to modem port 2 on my TT. Whenever I download a file, the modem initially downloads at about 3000 cps. However, after the first 20,000 or 30,000 characters, the transmission sort of hangs, although it doesn't actually time out. Eventually, it does finish downloading the file, but on a 100,000 byte file, it usually averages about 1500 cps and I can already get this speed from my 14400 baud modem. If it matters, I have tried running it with and with the HSModem programs.

Oddly enough, when I upload files, the transmission speed is over 3000 cps, regardless of the size of the file.

Has anyone connected a U.S. Robotics 33,600 baud modem to modem port 2 on their TT (or any TT port for that matter) and successfully downloaded large files at a sustained rate of 3000 cps?

Thank you,

Harvey Wolfe

"Atari" is a japanese word from the game of Go.

it serves to inform your opponent that you are threatening
to "kill' (ie. take and remove from the board) a stone
or a group of stones (the units of the game) on the next move.

I read somewhere, long ago, that Bushnell was quite an able go player.

incidentally, there is a FAQ about the game of Go, look at rec.games.go
or the MIT rtfm server. it also tells about playing through the net, which
can be done on a ST !!!

bye - merry xmas.

I have accidentally reformatted the C drive of my Supra 20 MB hard drive
and can no longer get it to boot up (since I destroyed my boot drive
that's to be expected). To make matters worse, for some reason cannot access any files on
my Supra utilities disk. Does anyone know where I can get the software necessary to
reformat my hard drive and install a boot drive back onto
it? I don't need to save the data on the hard drive, so I could refomat it
if necessary.

If anyone has a Supra disk, I would be glad to send them a floppy and a SASE if
they would copy it for me.

Please email responses. Thanks.

I've looked at Toad's website. Yes, the prices are higher than you can get from a second-hand shop or a direct used sale. That's the nature of being a dealership--on used equipment sales, you can't compete with what somebody just dumping a machine will ask. Somebody just dumping a machine can't take your credit card and be a legal entity you can take recourse against if there's a major problem, either.

As for your statement about supply and demand, you can apply it to them just fine. Don't demand their machines and you're applying it. What's the problem there?

Nobody's asking you to be benevolent. If you think Toad's prices are too high there are other places to get the machines from. They're setting their margins, other people have their own. Personally, I think they're too high for me, so I'm counting on a sales post here to come through. But others may disagree.

5479. Gemulator 96 and TOS ROM Images

Newsgroup: comp.sys.atari.st
Date: 1996-12-24 00:00:00 UTC
From: Jonathan Tranter <jonathan@wolves4westbrom2.demon.co.uk>
Message-ID: <vUewgCA5VAwyEwU+@wolves4westbrom2.demon.co.uk>
Source record: 131217
Cross-posted to: comp.sys.atari.st,comp.emulators.misc

Hello,

I was wondering if anybody had any information on using a standard TOS image with Gemulator 96 (a commercial emulator of Atari ST machines for the PC.) I contacted the author, Mihocka Darek, concerning the matter and received the following reply:

"No, that is illegal and not supported by Gemulator. We are not in the business of encouraging piracy. The makers of MagiC PC are also not in that business which is why their emulator also does not support running binary images of TOS.

- Darek"

This means that to use TOS with Gemulator 96 you need to purchase Gemulator 96 together with ROM board *and* TOS (v1.4) chips for $US149.95, compared to the price of the emulator alone which costs $US69.95. I think that in the past Branch Always Software / Emulators Inc. (who supply the emulator) used to supply an unpoplulated ROM board but I may very well be wrong here.

While I think I understand the reasons behind this attitude, seeing as I paid for my Atari ST and thus paid for a license to use TOS, I would assume that I would be able to use a memory dump with Gemulator 96 as long as I still owned my Atari machine. I guess that I'm not using the TOS code in the use for which it was originally intended so perhaps I'm breaking my license there, I'm not sure.

I know that if I disagree with the pricing structure then I just don't buy the software and it's a simple as that. Okay that's fair enough, but it seems that Mihocka is imposing an artificial software restriction to make more money in a similar manner to Microsoft with it's server and workstation editions of NT. It is also a similar case to some Atari ST and Amiga software, games mostly, that were supplied on floppy and would not allow installation to the user's hard disk. Would this user be breaking the law if he used a crack or copy program to circumvent this restriction ?

The freeware ST emulator for X Window, STonX, runs off a TOS image on disk as does the (shareware ?) Amiga emulator, UAE, so everybody who uses these systems and others like them is breaking the law whether or not they own a license for the relevant operating system.

Sorry for going on for so long but I think I'm making an important point. I would gladly pay the $US69.95 for Gemulator 96 instead of using STonX for free because of the extra quality and convenience of not

running from Linux, but I would not pay $US149.95 when morally it appears that I should not have to.

Thanks,

Jonathan.

> email comming.

Michael, thanks for the very reasonable message. Obviously, our business is changing. For us to be as heavily invested in the Atari market as we were 3-4 years ago is just unrealistic. We, as a company, are involved with several high-end projects outside the Atari realm. We're doing a lot of Internet and PC/network-related services, and generally re-engineering our business.

1996 was a rough year for Atari as a whole, as they basically ceased to exist. All in one year, supply of Lynx, Portfolio, Jaguar, and other items basically went away. We still have stock and leads on a lot of items in those categories, but they basically died this year.

We are not "getting out" of the Atari business or "dropping TOS." We are severely limiting the kind of products and services we carry in the Atari area, as they are no longer profitable. As you say, it's "odds and ends" at this point, and that's never been our strategy. We always focused on products we believed we could sell reasonable quantities of, and we still are. There are just a lot fewer of these products.

We are also dropping all Atari ads in Current Notes and ST Informer, as the rates these magazines charged (admittedly fair rates, required to run their business) were simply too much for the return on the investment. Running a full-service dealership does involve a huge amount of overhead (800 service, electricity, 15 employees, advertising), and magazine advertising is no longer viable when compared to fundamentally free media like the Internet.

So anyway, we are changing our business, but we are not changing our standards. If anyone has any questions about an order or needs something resolved, we will always be here to help with that. Please send email to info@toad.net; we don't let issues go unresolved.

We will continue to provide whatever Atari products we can afford to provide throughout 1997 and beyond. We are in the process of updating our web pages to reflect these changes now; check them out at http://www.ataricentral.com.

Thanks, y'all, for a great 1986-1996, and we're looking forward to a great 1997.

Dave

I agree with you on your favorable experience with the Ataris. I
have four at home (two STs, two Mega STs) and want to network them.
Which net system are you using, and how does it work?
There have been various systems, some through the midi port, some
through the serial port, etc., and I have no idea which works best.
What do you recommend?

>the market place. High Price Systems are not necessary. The
>inexpensive Atari Computes are really much more powerful than most
>realize.

Sadly, they are no longer inexpensive. Powerful, yes, but look at
the prices for these niche computers now and the old 'power without
the price' does not apply. I was lucky enough to have bought all of
mine before the Windows machines swamped the world.

with luck, I will still be getting a lot of use out of them for the
next four or five years.

5483. Gemulator 96 and TOS ROM Images

Newsgroup: comp.sys.atari.st
Date: 1996-12-24 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <59pb1c$434@news.pacifier.com>
Source record: 131221

Jonathon,

JT> I was wondering if anybody had any information on using a standard
JT> TOS image with Gemulator 96 (a commercial emulator of Atari ST
JT> machines for the PC.)

First, I purchased Gemulator 4.0, the ROM card with TOS 2.06, and later upgraded to Gemulator 96. The emulator is excellent. Dareks customer service is among the worst I've experienced from any business.

With that said, there have been posts by other users in this newsgroup on a method of taking a TOS dump (using a dump program designed for STonX), downloading the demo of Magic PC (primarily to trick Gemulator), and then download the Gemulator Demo for the actual emulator portion.

Even though I already have the ROM card installed, I very much wanted to free up a card slot (mine are all full). So, I tried the above and got it to work. Because I was excited about this new "feature" I spent $30 to upgrade to the newer Gemulator 96 to get the ability to run from a TOS image and the full screen Direct-X ability.

But, Darek apparently caught on to what folks were doing with the TOS dumps and this little trick didn't work with the registered version of the program (And surprise, the Direct-X mode didn't work on my machine either!). So, I'm back to using the DOS version 3.x of Gemulator and the TOS ROM card. It's currently my only option for full screen Atari emulation.

JT> We are not in the business of encouraging piracy.

I think that translates into them being in the business of selling ROM cards (or Magic). If users could use a TOS image, Dareks sale of ROM cards would end.

JT> The makers of MagiC PC are also not in that business which is why
JT> their emulator also does not support running binary images of TOS.

This translates into the makers of Magic wanting to sell an operating system. Same deal, if users could use a free TOS dump they won't use the Magic operating system (OK, some might, but I don't think most would).

I seriously doubt either company is all that concerned about users making disk images of TOS. They just want to make money (don't all businesses?).

JT> While I think I understand the reasons behind this attitude, seeing
JT> as I paid for my Atari ST and thus paid for a license to use TOS, I
JT> would assume that I would be able to use a memory dump with
JT> Gemulator 96 as long as I still owned my Atari machine.

The way I see it, as long as I own the TOS chip I own the right to make a copy of it. As long as I'm not giving copies of the TOS chip to other users, I can't see how I would be violating copyright laws. If I'm wrong, then every user who makes a backup of their hard drive is violating copyright laws for every piece of software they have installed on their system!

:
: Thanks,
: Georges.

Georges,

I'm sorry this took so long, but for the life of me, I couldn't remember the name of the product. A very nice light synthesizer is the Technation Bit Bopper, Falcon only. I don't know how responsive it is to inputs, but I can't see why they wouldn't put that sort of feature in there.

There's another sort of demo that I found on my computer, but I couldn't seem to get it to play fair with the Falcon.

You did look around the archives, right?

Anyway, for the above produect, I did an Alta Vista search on "bit" and "bopper" and "falcon" and it listed everything I needed--not too many pages with that combination of words!

So Edith Pro is now freeware, or something like that. If it is as powerful and useful as I have been told, I would like a printed manual, or whatever it was that come with the commercial version.

What German University computer has the latest version, and who will sell me a copy of what came with the commercial version?

:
:
: Greetings all,
:
: A couple of questions..
:
: 1. What is the best sound file editor for the TT (must work with a graphics
: card)

By sound file I presume you mean recorded audio. AFAIK, Zero-X will work
with the TT, though the TT's sound recording and playback is akin to the
STe (8-bit resolution). Zero-X seemed to be a really nice editor, at
least by the demo, but it's sort of pricey--last price I remember was
$149. But I think it's still being enhanced, which is a plus.

Or, there might be some other tools from Emagic or Soundesign.

Computer Direct had links to a TT hi-res soundcard in development along
with a HD recording program, developed in Germany, I believe.

: 2. What program can convert .MID files into AVR or WAV?
:

I don't understand. Isn't a .mid file just a collection of instrument
controller data? The actual sound is produced by a device of some sort,
such as a card or synth. I don't know, excepting through a software synth
(like softsynth), how you would translate control data into a sound file
without something to produce the sound. Once you get that, however, it's
not a problem to just record the playing of the instruments. Well, not a
problem if you have two computers. Otherwise, you might be forced to try
something like Cubase Audio, which, from what I remember, will not run on
anything but a Falcon, will not run under MagiC, etc.

Although, I did remember seeing some programs to manipulate Csound files.
Maybe you might want to get into that.

I know about that check box but unfortunatly it was greyed out. I
have now managed to trace the problem and it turns out that one of my
accessories (blowup.acc) was causing the blitter to be disabled.
I now have the blitter enabled and am enjoying much improved screen
redraws now.

And while I'm typing this Merry Christmas everyone.

Hi Paul!

p> I have just purchased a 520STe, and placed 4mb of memory in it, and
p> its woking brilliantly.
p>
p> I have also got two hard disk drives hanging around, a 500mb SCSI drive,
p> and a 81Mb IDE hard disk.
p>
p> I was wondering if there was any way of connecting these to the STe,
p> cheaply. I am experienced with electronics, programming and operating

Forget making an interface and buy a host adaptor, you can't go wrong with an ICD Link II, and use that to connect to your SCSI drive (ensure that thedrive is jumpered to provide term power to the SCSI bus to power the Link) You can then chain other SCSI devices including CD-ROMS etc.

Forget the IDE drive, it's not really practible.

p> Anyone got any Ideas.

That's the best way IMHO.

Regards, Derryck

Message-ID: <01bbf208$514bc180$LocalHost@datel451.cts.com>
Source record: 131234

I can't think of any reason why it shouldn't work. But I do know this:

The floppy disk format I use on my MSTE (TOS 2.06) is 10-sector, 82-track High Density. Those floppies are recognized by my PC. Furthermore, the PC has never had a problem reading files off or writting files to those floppies. But, lose95 files seem to have extra stuff in them. (As compared to DOS or TOS files.) Sometimes my MSTE can read them, sometimes not.

mark.

5497. Re: Gemulator 96 and TOS ROM Images

Newsgroup: comp.sys.atari.st
Date: 1996-12-25 00:00:00 UTC
From: rdupuy5596@aol.com
Message-ID: <19961225052200.AAA25090@ladder01.news.aol.com>
Source record: 131235

I was impressed with the Gemulator demo and bought the full version from Toad along with Magic (I ordered Magic 4 but was sent Magic 2)...

and I am very disappointed...

Not only did toad send me the wrong version of magic, but they did not send me a registration card and Darek at Emulators, inc.will not help me at all...Toad has yet to send the registration card, nor have they responded to my Emails regarding the registration card. Darek says return the software to Toad and buy from him, well I wish I had done that now, but it would be very hard to return the software to Toad since they do not accept returns.

Toad also sent me a bad Gemulator disk, but that, at least, has been resolved.

One of the reasons I am so dissappointed in the full Gemulator is that it does not do anything of the things the demo couldn't do on my computer. Sound doesn't work, full screen mode doesn't work....I even went out and bought Windows 95, only to find out DirectX doesn't work with my graphics card, and furthermore no Windows 95 driver has ever been written for my graphics card (despite the fact that I made the vendor promise it was compatible with W95)...so contrary to Darek's documentation that Windows 95 is faster, I've actually seen a very dramatic performance degredation under Windows 95...I would reload dos 6.22 and Windows 3.11, but guess what, the disks have gone bad, so I'm stuck...Gemulator runs so slow now that it is virtually unusable. Also, under W3.11 Magic put the name of the disk drives under the icons, for some reason it doesn't do that anymore and furthermore keeps running my floppy drive on reboots, which it never used to do....

Gemulator has the potential to be a remarkable product, but if you aren't sure about your equipment, then be wary....

I have a Pentium 60/ w16mb Ram and a 2mb VESA local bus video card, and I currently cannot use it. It looks like I'm going to have to upgrade my system again......

I don't know for sure why I can't get any sound, but if its because Gemulator uses Directsound then I am going to have upgrade my sound card... My Genuine Creative Labs Soundblaster card does not support direct sound. You must have a Soundblaster 16 or better....

: >
: > Failure to boot: Fatal error in Gemdos!
: > Frequent memory problems. 'Destroyed memory block'!
: > JPEGD locking up.

I run JPEGD happily, and have never had a problem booting MagiC. Some programs do have the nasty habit of over-writing memory that is being used by other programs and/or MagiC/MAGXDESK. I tend to only use these programs under single-TOS because they perhaps were _not_ written with pre-emptive multitasking in mind. Memory addresses that these programs use are perhaps hard-coded into the software so if some other program that is already running and using said memory blocks suddenly has part of its allocated memory jumped on by a rogue program, then I guess problems will be the result!! :(

I have a Falcon030 16Mb/340Mb with TOS 4.04

AUTO programs I use with MagiC are:

NVDI 3.01
ADDMEM
LETEMFLY
MACCEL34
JPEGD (often, not always)
CACHEnnn
A-MAN (needed by WinCom, only with WinCom though)

Software I run parallel to MagiC includes:

APPLINE (not very often)
START
STEWART (most of the time, not compatible with PhotoLine)
WBDAEMON
WINCOM (sometimes)

I have looked at alternative desktop shells but NOTHING else is as stable as MAGXDESK, so THING and GEMINI are a no-no AFAIAC...

I run 640*480*256 colours on a VGA screen. I also have 'created' my own font(s) to use in place of the Monaco fonts supplied with NVDI. I have

even altered the MAGXDESK resource files to 'personalise' the desktop a bit! :) Despite all this 'bastardization' of my desktop, I find that MagiC is still very very stable as long as I use good software...

I suggest playing with your setup a bit to see if one or more programs you use are causing all of the troubles. Remember that the setup I have above is very stable so perhaps you can use that as a guideline to see if you can fix things up a bit...

Hope this helps...and oh! its December 25 so Merry Xmas!! :)

Is there nobody with a fited CaTTamaran rev.B ?
I have always the following problem ...
Having bought one in second hand, I would like to receive help for
the connections BECAUSE THERE ARE NO MORE COLOR CLIPS NOR CONNECTOR ON IT

.. I already know where to connect the three first points (A,B,C) ...
but I have no way to find where to connect the three others (D,E,F) ...
normally these three wires are together in one connector and must be
connected to the W101 connector on the TT board ...

Please help me ... is there any father Chrismas among you ?

I you have the installation book (not the soft !), I will pay for a
copy ... though, I don't know if it contains more informations than
the soft user manual.

I think the only way to know about the connections is to look inside
your TT ... Yes, I know, it takes time and work and nobody would like
to do that for another people who's even unknow for him.

Though I continue to believe there is some father Chrismas among you.

The control key on my TT030 keyboard broke down a while ago, although I am not sure if this is the same problem referred to here.

The problem was caused by a post in the casing rubbing on the plastic layer containing the tracks to all the keys, IIRC. Either way, it was fixed by carefully threading a _thin_ piece of wire through the plastic layer with a needle in order to rejoin the broken track. It has been going fine ever since.

NVDI disables the blitter when running in 256 colors. I don't think
there's any way around this(?). In 16 colors the blitter is working.

No chance with the IDE. The SCSI is fine but you can't avoid buying an
adapter to go between DMA and SCSI. This, a supply of 5v and 12v and some HD
utility s/w (PD) is all you need.

Look for adSCSI or Link adapters second hand - you should find one for around
£25 probably from a guy who has upgraded to Falcon and can now plug his SCSI
straight into the Falcon bus.

A ppp-provider here in copenhagen has just told me that it would be no problem to establish an internet connection with an atari using slip (stik). it should just be a question of using one of those expensive zyxel modems with built-in communication protocol converter like the Zyxel elite 28641.

has anybody tested that ''''''?

Could you expand a little on the technique used to do this repair? I mean did you try to solder the wire to the trace, thread it vetically thru the trace and back up on the other side of the break or did you slide the needle horizontally thru the plastic then along the trace under the plastic and back up thru the plastic on the other side of the break? I may try this fix first, before I order a new mylar from Best, if as you say it is a firly permanent fix!

> Yes it should be recognised, provided the following are true:-
> Your disk drive is double sided (some TOS 1.04 machines were not).

ALL TOS 1.04 machines have Double Sided drives .

The only models with single sided drives were the very first 520 STs with
external floppy, they come with TOS < 1.0 or even with TOS in Disk ! (I had
one of this).

TOS 1.04 was released (if I'm not wrong) with the models inmediatelly
previous to the STe. I managed to obtain a pre-release of TOS 1.04 in disk,
and it has provision to disable the blitter that was introduced with the
STe and (Mega ST?)

> You are using the desktop formatter, or any other formatter which claims
> to produce DOS readable disks. I don't think sector skewed formats work
on
> the PC.
> If your drive is SS, you will have to install a driver on the PC to read
it.

Another source of problems for the PC to properly read ST formatted disk
are :

* Boot sector viruses
* Boot sector Anti-viruses
* defective drives (misaligned) (usual on very old STs)
* skewed formats

It's called Sonavista from Tecnation Digital World. I believe John Perez in Hawaii
is the new programmer for it. (At least he was advertising it on rec.music.makers.synth newsgroup)

Be warned that this is not cheap. Last time I remembered, this was a VAR product that cost $2000 (includes a Falcon though). They did plan to have a consumer-priced version, but I don't know what happened to it.

Tecnation can be reached at: alex@tecnation.com (or something like that)

-Phil

Clarification: Early 520STfm's (internal drive) had single sided drives. It was a sore spot between Atari and their dealers at the time.

> TOS 1.04 was released (if I'm not wrong) with the models inmediatelly
> previous to the STe. I managed to obtain a pre-release of TOS 1.04 in disk,

The blitter was designed into the original 1040 ST but due to development problems was not installed in the first production runs. So early 1040's had an empty socket for the blitter, later ones had the blitter installed.

Source record: 131116

Someone gave me a Hint/Tip for PageSTream but I can't try it until I can buy a stock Mega 4 ST to replace the one that just died. My 1 meg 1040ST doesn't have enough memory. I'm also looking to buy one of the HP5 Laser Printer that does 600DPI on the ST. Direct all replies through E-Mail to: bensmith@teleport.com

The Shadow of Shadow Software told me this one. E-Mail me if it works for you. I'd like to try it, but I won't be able to until I get a Mega 4 ST. Lets say you wan't to print a Pagestream Document. But you don't have enough memory. Set up your printer driver for your current printer. Set the driver to Print to Disk. If I'm correct, the created file will be executable from your ST Desktop, independent from PageSTream. Great for memory poor computers. Make sure you have the right driver for your printer. This should work in other ways. Lets say you want to send someone a sample of your work. Make yure you know whay printer they use. Create the file and send it to them on Disk.

5518. Gemulator & ROMS

Newsgroup: comp.sys.atari.st
Date: 1996-12-26 00:00:00 UTC
From: James@grunt.demon.co.uk
Message-ID: <32c96113.1837967@news.demon.co.uk>
Source record: 131117

It's interesting to hear Dark of Emulators Inc going on about how "we don't support piracy" in that Gemulator (reg'd) will not support loading ROMS from disk (you have to buy the ROM card AND ROMS from him).

In Comp.Sys.Amiga.Emulations there are two interesting threads:

UAE: An Amiga emulator for the PC that uses your Amiga ROM on a PC.

Emplant/Shapeshifter: A Mac emulator that uses your Mac ROM on your Amiga.

None of these 3 programs or their authors seem to have a problem with other companies saying they are encouraging piracy. I think they'd be interested in Darek's blinkered view.

Face it... if someone WANTS to pirate they will. I would not be surprised to see hacked versions of Gemulator that load ROM from disks.

Darek IMHO is just out to increase his profits under the guise of being anti-pirate. I "OWN" my Amiga and use the ROM on UAE on my PC when I wish. I'd like to do the same with my ST.... lots of others would too.

I guess Darek's attitude will actually encourage piracy... of HIS product. What would U use? His version or a hacked one that does WHAT YOU WANT?

I don't intend to buy Gemulator now I discover his added "feature" but I must admit I thought it was worth $69.95 or whatever.

nice one Darek!

> some way then we'd have a pretty good GEM happy MPEG player! I know its
> easier said than done but we live in hope?

True! I planned to do that some time ago, as mentioned in the MPEGDSP
startup screen.
However, since there was nearly no contribution or even feedback
at all from Atari users, I was forced to abandone this project.

Note that I already spent several months of code adaption and
optimization for the MPEG routines in 1stGuide, without any
remarkable compensation from Atari users (I could not even
pay the needed development tools from the fees).
Atari users only prefer to complain about slowness, without
appreciating the given features and spent efforts.
(I still have to find a program on any other plattform which
would be capable of playing multiple MPEGs at the same time,
like I provided with 1stGuide.)

I guess that with my optimizations (in C) the MPEG code in
1stGuide is around 2 times faster than the original version!
So, it's not the code which is slow, it's rather your hardware!
(Hint: in 8-bit [256 colors] screen modes the display routines
lead to the biggest slowdown! Use HighColor or TrueColor modes
for better and faster playback!)
I use the original mpeg_play version here on my Sun workstation
and on Pentium Linux boxes, and it's already pretty fast,
without spending efforts for further optimizations!

> While Guido is about it he could also put a small amount of code in there
> to prevent MPEGDSP from locking up when it encounters an incomplete frame
> (please! :)

With my latest MPEGDSP release (there are floating around rather
outdatet versions on the net) I did not yet encounter such problems
(solved these with updates).

You will get this version from me after registration. Note again,
that without contributions I can't provide support!
And, hey, although the MPEG efforts would alone justify the fee
as explained, 1stGuide can do some other nifty and unique things
than playing MPEG movies :-).

I've yet to see the first contribution from anybody in UK, US, AU, NZ, SE, and FI for example, which is rather astonishing if watching so many people from these areas discussing here or downloading my software...

This attitude of Atari users will kill your plattform in the most straightforward way! If this is what you want, please keep going on this way...

In the Unix/Linux/X community I experienced much more feedback and collaboration, so it's clear to me where to spent my efforts preferably.

My latest experience in this matter, for example, was a discussion about MPEG Systems in 'comp.compression' with Tristan Savatier (maintainer of MPEG.ORG) and others. There I mentioned a piece of code which I wrote some years ago on the Atari (and then ported to Unix), and I made it available quickly ('raw') on my site. While I never found anybody in the Atari world interested in this kind of stuff, I was completely surprised by the huge amount of interest and accesses from all over the world to my little old code. I then realized, that Tristan had inserted my reference on his MPEG.ORG site (http://www.mpeg.org/index.html/systems.html) due to its usefulness.
And I did not even found the time to write a little html page for this tool and lift it up somewhat due to my grown Unix experiences (use as filter)...
Again: While there was never feedback from Atari users at all for such tools, I now encounter multiple accesses daily from everywhere (watching my http logfiles), which I didn't expect due to my bad experiences in the Atari world.
(A similar experience I made recently with my FixPix code.)

However, I still like to use my Atari machines and will keep working on them as time permits...

Regards,
Guido

Hi Atarians

I've added a Shareware download page to my web site. Go straight to it on:

http://www.flexnet.co.uk/~hender/dl.htm

There are not many programs available at the moment but I'm open to
suggestions on what to add.

ATB, Carl

Atari Falcon - 486DX4/75/16Mb IBM(clone)
Location: East Anglia, England
WWW: http://www.flexnet.co.uk/~hender/ (email.htm for PGP key)

Hi Guido,

That's a shame, your 1stguide is a good product. I know Guillaume Tello was looking for mpg decoding routines to put in his m_player, perhaps he woul;d swap you for his assembler routines. His AVI and MOV player works very acceptably on my TT... That way you could both get some benefit. His email address is gtello@planete.com if you are interested...

BTW, what is the latest release version of 1stguide?

Regards,

] the file and send it to them on Disk.

Well the file wont be executable, but it certainly can be spooled out to a
printer later or transpotred on a floppy disk (depending on the printer driver
used, a lot of print files will be *very* big.

I use this method a lot for postscript files.

Sorry, I'm not interested in AVI/MOV, since these are *not* real
video codec standards (only kind of 'framework'), and all available
AVI/MOV codecs are inferior in compression/quality tradeoff compared
to MPEG. So, it's a waste of time IMHO to deal with AVI/MOV,
since MPEG technology is simply superior and an open and
accepted industry standard.
Life would be much easier and digital video more popular if more
people concentrated on the best technology available (MPEG!) and
don't confuse users with different, incompatible and proprietary
codec stuff as in AVI/MOV.

BTW, there's a new standard for *lossless* animations in
development from the PNG group (called MNG). This is an
interesting and reasonable project!

> BTW, what is the latest release version of 1stguide?

You'll always find the latest version under
http://www.esc.de/homes/guivol/1stguide/

Currently it is the 08/Dec/96 release.

Regards & Merry Xmas,
Guido

For Sale:

- 1040STf (1 Meg)
- SC1224 Color monitor
- Supra SCSI IF
- Seagate ST125N HDD (20m, I think - may or may not work)

The drive and controller may be put in an external case or used with a standard PC type power supply. Everything worked when it was put in the box (a few years ago!)

$150 + Shipping

I have a neat program from Doctor Bob called fileprin that can handle this
situation just perfect, just feed the file printed to disk to fileprin and
make as many copies as you need! I can put it on atl.binaries.atari and
e-mail it to anyone that can't get ata and would like to have it!

5532. Atari Prototype Auction #1

Newsgroup: comp.sys.atari.st
Date: 1996-12-26 00:00:00 UTC
From: Curt Vendel <cvendel@aol.com>
Message-ID: <32C2D2E7.3829@aol.com>
Source record: 131131

ATARI PROTOTYPE AUCTION #1:

The following RARE items are available for auctioning.

RULES: Bids start at specified price and will go up in $10 increments. Updates will be posted daily to all bidders. Auction will go until Jan 10th 1997 and will then enter the GOING, GOING TWICE, GONE stage. All bidders who make it to the GONE section of the bidding are responsible for shipping costs. All items will be shipped PRIORITY ONE MAIL. Please don't bid unless you are serious about buying. All items are sold "as-is" and there will be no returns and/or refunds. No items will be shipped until payments are received and cashed.

Atari SALT Diagnostic Module: Enclosed in an Atari 850 interface, has 1 Serial SIO port, 4 Atari RS232 ports, power input, an RCA plug where the Parallel intreface would normally be, and 2 14 pin chip sockets, an HP seven segment ultra-bright LED display and reset switch. Unit powers on and doesn't cause any Atari that was hooked up to it to freeze. Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (3 Available) Minimum BID: $50.00ea.

Atari XL Salt Diagnostic Module: Enclosed in an Atari 850 interface, unit has PBI cable comming out of right side SIO connection cut-out of 850 module for testing parallel bus interface.
Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (1 Available) Minimum BID: $75.00

EXTREMELY RARE: Atari 6402A Prototype Motherboard (only 3 exist!!!) Prototype motherboard, apparently a test bed which has all the same components contained on an Atari 1450XLD "TONG" version motherboard including disk drive controller area, modem area, SC-01 voice synthesiser, Parallel Bus Interface. This unit has ports positioned on all 4 sides and does not appear to be a "commercial" product but appears to be more of a test design to condense the Atari 1450XLD TONG motherboard down to about 1/2 the size, (unit is NOT functional)
Minimum bid $120.00
Image will be posted on my webpage upon request

Atari XE Game System 8 port multicart prototype board:
A prototype test board which may have been a pre-design idea to allow the XE game system to contain and select up to 8 cartridges (this of course turned out to be built in BASIC and MISSLE COMMAND in the released version) The board is about 8" by 12"
Minimum Bid $50.00

Image will be posted on my webpage upon request

Atari XEP-80 Prototype:
Atari Corp design prototype of the XEP-80 system. Design consists of a mainboard, daughter card, DB-25 connectors and Atari joystick interface cable, this unit has never been tested and I am not sure if the current commercially released XEP-80 software will work on this pre-design prototype.
Minimum Bid: $75.00
Image will be posted on my webpage upon request

Make all bids and requests for images to:

Curt Vendel
Email Address: cvendel@aol.com
webpage: http//:members.aol.com/cvendel/vaporware.html

Hi Guys,

OASIS 2.10 is now available from the following places:-

FTP:

ftp.demon.co.uk pub/atari/oasis

ftp.cnam.fr pub/Atari/oasis

Please allow 24-48 hours for uploads to appear in these areas

WWW

http:\\www.yeadontt.demon.co.uk\

Available no from download area.

There are two files, OASIS210.TOS, this is the full OASIS 2.10 package
and UPDT_210.TOS, this is an update for OASIS versions 2.0x to 2.10
standard.

5535. Timing troubles with Cubase Score.

Newsgroup: comp.sys.atari.st
Date: 1996-12-26 00:00:00 UTC
From: Ettore Colombo <etco@uninetcom.it>
Message-ID: <32C2EDE8.76CD@uninetcom.it>
Source record: 131134

I'm a Cubase user since 1991 and I haven't got any serious problems
with the software unless I've purchased a second hand Steinberg Midex
interface. I run Cubase Score 2.0 (rev. 06) on an Atari Mega/STE
with 4Mb of RAM and the Midex should takes care of all my MIDI gear.
But since I've installed it, I've noticed some strange behaviours in the
sequencer's timing, like a tape that goes out of sync for a moment and
then return right on the next measure. This bad effect is even more
dramatic when I use drum loops. I've tried everything to get rid of
this problem: I've run Cubase deactivating all the modules, all the desk
accessories, the blitter, the memory cache, the Fostex R8 driver that
resides with the Midex one in the MROS folder. The trouble persist.
Where am I going wrong? Maybe the installation of the Midex is
incorrect? (I don't have the user manual). Please help me. And
don't tell me to change the computer!
Enrico Colombo e-mail: etco@uninetcom.it

>Power without the Price was Atari's idea for a slogan. And a load of Crap.
>It defies logic and goes against All the Laws of the universe. Like "A Man

In 1988, the cheapest PC Clone available in my area was an (PB)
8Mhz, 8088, w/ 640k & 10Meg HD, dual 5.25 floppies and a cga card.

It cost $1000.

A 520ST (w/ SS drive) cost $300.

Despite the appearace that that Clone outspecs this ST, the
ST ran circles around that machine and was quite a bit more
useable.

Just because you can't manage it now; it doesn't mean that it never was.

Power without the Price, existed once.

It is not a far stretch to say that that is why many of us are here.

Congratulations Chris you are only the second Falcon owner that I know
who is not having a problem with Magx 5.03 . I am not the other one as
it will be evident . This must be the spin doctors version of what is
so good about Magx . I have exactly the same system as yours except in
my case I use Blowup and also Powerup 2 . I don't know if this is the
case with you or not . Now let's start the list of things I tried to
eliminate with Magx . Ran NO Auto programs except Magx and NO ACC's
and still it BOMBED . OK I'll give Andreas the benefit of doubt that
maybe it's the crappy Falcon. I see by the posts that maybe it's all
Atari's that are crappy because errors are being reported from all
systems . The most frustrating thing about Magx is programs that work
in Tos no longer work with Magx ie : Master Tracks Pro a midi program
that works on all Ataris . Maybe if these new OS came out with a
backwards compatibility we wouldn't be having so many problems .
Another problem I have noticed but I don't know if the blame goes to
Magx or Hddriver's long filenames . A lot of corruption in all of my
partitions . I'm still working on that one ! Anyways I'm happy that
Andreas finally has one satisfied customer but please don't count me
as one of them .
P.S. You can now add another program to that list as I just noticed
that Everest didn't send my message while using Magx .Not only that
but it sent it out twice . Ah well it should find some very satisfied
customers on the PC side as they are used to programs bombing and
buggy ala Bill Gates the upgrade is now available for a small charge.

Actually, the correct address to complain about abuse by a demon site
is abuse@demon.net.

> > a demon user, demon does not give dotted IP addresses in the NNTP line
> > and this address does not appear to be a demon one anyway, they have

As an example of Demon headers, take mine.

> > just been allocated a new block of IP numbers so I may be wrong but
> > most demon IP's begin with 158.

The original 60000 addresses were (like mine) 158.152.x.x. The new
addresses are 194.something.

Most likely they too lazy to wipe them in the first place. Although
to be fair I can't see how much, other than his e-mail address used as a
reply-to, could be used. Demon have only just started offering POP3 as
a beta test service, and remotely only by setting a second password. If
the guy was so raw he needed training I very much doubt he would have been
able to do it.

I have a few NEW Atari Jaguar Controllers (12 button). They are out of box with no manual or instructions. Theyre Black w/Red buttons.

I can only sell them as pairs for $25.00 (for 2)+shipping

I know that they work on the STe

That is most unfortunate, but I suspected that might be the reason why I could not find them anywhere. I have recently purchased second-hand some lexicor software (Phase-4) but was suprised that it was so unfinished. There is even a list of known bugs in Chronos, which will be fixed "in the next update". Now I know there will not be a "next update".

Who now distributes or develops the Lexicor software?

5545. 2 IDE drives on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-12-26 00:00:00 UTC
From: d@mail.sstar.com
Message-ID: <59st3omo1@kiyoko.communique.net>
Source record: 131256

```
->Bottom line: There should be no problem using EIDE drives with the Falcon's
->IDE controller. Connecting a 3.5-inch drive will require a cable adapter,
->that's all.

What about connecting 2 IDE drives? Like 1 2.5 internal and 1 3.5 external.
HDDriver supports 2 drives, do I need a "Y" cable going from the Falc
to both drives? The internal has power on pins 41+ on the cable from
the Falc, can an external IDE drive use the internal power pins?

Many more questions could follow, ALL are warned :-)

: the Falc, can an external IDE drive use the internal power pins?

There should be absolutely no problem in using two IDE drives. The idea
of using an external is a good one because there really is only enough
room for one 2.5" or 3.5" (at a squeeze!) hard drive in there!

Even AHDI 6.06 looks for a second IDE device when booting. You will
definately need a cable of some sort to connect to the external drive
from inside, and some way of routing that cable out of the Falcon (sounds
like a job for the tin-snips or the hammer!!).

The power could be supplied from internally, but I would be suspicious of
the rating of the power supply that gives the juice to the internal
drive. I would think that things may get a little warm if you try and run
a second drive off that supply...

Hope this helps...

:] frames and such.
:] Mario Becroft Auckland, New Zealand
:
: True - but it's soooooo slooooooow :-(

It is slow, however the author of 1stguide is none other than Guido Vollbeding, who also wrote MPEGDSP for the Falcon. MPEGDSP is pretty snappy and if Guido could write 1stguide to use the code from MPEGDSP in some way then we'd have a pretty good GEM happy MPEG player! I know its easier said than done but we live in hope?

While Guido is about it he could also put a small amount of code in there to prevent MPEGDSP from locking up when it encounters an incomplete frame (please! :)

: Is there nobody with a fited CaTTamaran rev.B ?
: I have always the following problem ...
: Having bought one in second hand, I would like to receive help for
: the connections BECAUSE THERE ARE NO MORE COLOR CLIPS NOR CONNECTOR ON IT

: .. I already know where to connect the three first points (A,B,C) ...
: but I have no way to find where to connect the three others (D,E,F) ...
: normally these three wires are together in one connector and must be
: connected to the W101 connector on the TT board ...

W101 connector... o represents a pin

o "F wire"
o "E wire"
o "D wire"
1 <- marked on
W101 <- motherboard

This is to the best of my knowledge. Normally the wires have a clip on
the end, with a white patch on the side. The instructions say to attach
the clip so the white patch aligns with the "1" on the motherboard.

I have a CaTTamaran that isn't installed, and I deduced these by looking
at the wires and how they attached to the clip, and how the instructions
said to attach the clip.

Standard disclaimers apply...

Power without the Price was Atari's idea for a slogan. And a load of Crap. It defies logic and goes against All the Laws of the universe. Like "A Man is worthy of His Hire." and "You get what you Pay for." and "If it sounds too good to be true, It's probably a Lie." and in Atari's case, "You sow what you reap" aka "What goes around, comes around." Atari trying to appeal to cheapskates was it's undoing. Don't punish Toad because of an Atari Slogan. They're trying to support Atari, stay in business and feed their families. I just received a Toad-M SwitchBox which will let me use a MultiSync Monitor on my Atari ST to do Color and MonoChrome on the same MultiSync. This will also be the Last one Toad makes as their Technician is leaving because not enough people wanting to keep him Employed with a DEMAND for work. I know about the Crap that Bonafide Atari dealers put up with. And how many don't appreciate them. I blame it all on Atari, especially their slogan "Power without the Price!"

dave@mbha.demon.co.uk (dave) sez:
In article <Pine.SUN.3.92.961226034857.9027D-100000@kelly.teleport.com>
bensmith@teleport.com "Bravo Sierra Computers" writes:
] The Shadow of Shadow Software told me this one. E-Mail me if it works
for
] you. I'd like to try it, but I won't be able to until I get a Mega 4
ST.
] Lets say you wan't to print a Pagestream Document. But you don't have
] enough memory. Set up your printer driver for your current printer.
Set
] the driver to Print to Disk. If I'm correct, the created file will be
] executable from your ST Desktop, independent from PageSTream. Great
for
] memory poor computers. Make sure you have the right driver for your
] printer. This should work in other ways. Lets say you want to send
someone
] a sample of your work. Make yure you know whay printer they use.
Create
] the file and send it to them on Disk.
To which Dave responded:
d| Well the file wont be executable, but it certainly can be spooled
out to a
d| printer later or transpotred on a floppy disk (depending on the
printer driver
d| used, a lot of print files will be *very* big.
d| I use this method a lot for postscript files.
And I say: this works just fine, and the file can be printed via
'show-print-cancel' on the desktop. If you set up a macro in
Codekeys, you can print multiple copies, as fast as your printer will
go. I expect to do a little experimenting with this, working out what
print accelerators get the best results, but there is no question that
it does work.
Good luck!

Well, according to my atlas, you can't be very far from some member of TariLand User Group. Absolutely the best way to equip your ST with *anything* is to join a users group and ask for advice. If your luck is really in, they might appoint you 'equipment manager', and place all the hardware in the group at your disposal. (Atari Boise Users Group is looking for one right now - our current guy is in the hospital with a broken back from falling off a ladder. As soon as he is healthy, he becomes the newsletter editor, and we will need to find another victim to schlep the ST, monitor, and hard drive around. If you live in the Boise area, it could be *you*! But I fear that it may be *me*.) Even if Tariland doesn't need an equipment manager, they will be able to point you to good local deals and provide free software for the drive. I guarantee that you will spend less and get a better drive if you take my advice. (If your user group doesn't work like this, I feel sorry for you.)
If you can't contact Tariland, here are some general tips: you will need a scsi drive (not an IDE drive, which is much commoner for the pc), a 'host adaptor', and software. Finding a scsi drive is not difficult, usually. The host adaptor, be it AdSCSI, AdSCSI+, The Link, The Link II, or Link 96, may be available locally, used or new. If you buy the Link II (new), you will get software with it. Dealers, such as Toad, will sell you the whole shebang-in-a-shoebox or other case, plug and play. Or you may be able to find an Atari-branded hard drive, which is also plug and play. Since these Atari drives are aging, slow, and noisy, they are not necessarily the best deal; on the other hand, they are guaranteed to work with the ST until death do them part. I used one for a couple of years; there is no reason you can't.
Hope this Helps! "The Poor Deluded Soul" - tderrick@acpu.com

Hi kellis@primenet.com, on 26 Dec 96 you wrote:

k> Hi a friend of mine has an epson compatible printer 24 pins. She
k> would need a better driver than the FX80.SYS one..
k> Anyone has that for speedogdos or NVDI?
k> Or at least the control code?...

You need an "LQ" or "850" driver. They are pretty common although they tend
to go under different names.

k> and hope you got a nice xmas :)

.... yup, and you too I hope, Katherine.

A few days ago I downloaded Stik 1.12 from this site. I used it together with CAB 2.beta and OVL 1.18. Result is strange: connections are made fine, but the pages I receive are not translated, they just are plain html-code; no graphics, no links usable.
Strange, I never had this before. Any clue to what can be done?

regards,
Marc_Laan_Amsterdam_Netherlands.

5566. Pot of Gold Stuff for Sale (INTERESTING)

Newsgroup: comp.sys.atari.st
Date: 1996-12-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.122796.174125.61@wxs1-16.worldaccess.nl>
Source record: 131154

This is the December 20th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)

The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM

I also have for sale the Suzy B's Software Treasury, a double CD ROM with over 1000 Kb of Atari
stuff, too much to even begin to summarize here. It's yours for 15 British pounds (or the
equivalent), including postage (2.5 British pounds - or equivalent - extra in case you live
outside Europe).

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

My kids still get hours of enjoyment from the old STFM
(upgraded to 1 Meg). Is games software still provided
for this machine in the UK?? If so where and how do I find
out about it? Are there any ST mags still in print which
deal with this old technology??

Thanks for any help in this regard

Happy New Year

I think you will find you need CAB.OVL 2 to work :-)

I have used CAB 2 beta on-line successfully within its limitations :-)

Hi Guido,

Some fair comments there ... too much for me to reply on-line with, but
your software is brilliant and is used everyday on my Falcon !

> I've yet to see the first contribution from anybody in UK, US,
> AU, NZ, SE, and FI for example, which is rather astonishing if
> watching so many people from these areas discussing here or
> downloading my software...

What does Joe Connor do with my money then ?
I registered 1stGuide a couple of months ago - ï¿½20 UKP - Did you receive
that ?

Maybe you should speak to him as I'm sure there must of been many more
UK registered users as 1stGuide is a very nice piece of software. (It'll
run better when I get my Nemesis fitted running 640x480xTC will be a
dream !)

: What is the last new version of the audio-file-convert program 525 ???
: And where do I get it. ???
: Thanks Preben Sloth, Denmark (psloth@post2.tele.dk)

I'd like to know the same thing. Last version I have seen is version 2.13
and it is at cnam.fr... or ftp.cnam.fr or is it www.cnam.fr?

Something like that. Does anyone know of anything later the 2.13?

No where I hope! It's commercial software. Might ask here if anyone wants
to sell their copy of it! I've seen it offered for sell here occasionally.
One of, if not THE best game of all time for the ST.

I've accumulated a number of programming-related books
and programs over the years. I never got around to it,
so they are for sale. I'd like to sell it all in one
shot if possible.

GFA Books: Programmer's refernce guide, Vol.1
Programming with GFA Basic 3.0
GFA Basic Training Rebbot Camp
Concepts in Programming
The GFA Basic Book
these (5) for $25
with GFA Basic 3.5 $65

C books: Atari ST Application Programming
Compute's Application Guide, Programming
in C
C-manship Complete w/disk
these (3) for $20
books with Lattice C 5.60 $65
books with Laser C $45

Assembly: The ST Assembly Language workshop w/disk
book with Devpac 2 $20
book with Devpac TT $30

General Info: Compute's Atari ST books-
AES
VDI
TOS
The Concise Atari ST Programmer's
Reference Guide
Sybex - Programmer's Guide to GEM
Abacus Atari ST Books -
#2 Internals
#3 Gem Programmers Reference
#4 Machine Language
#8 Peeks & Pokes
#10 Introduction to MIDI programming
#13 ST Disk Drives: Inside & Out
AES Quick Reference
VDI Quick Reference
these (13) for $50

Programming Languages sold seperately if books sell first:
Lattice C 5.60 $40

Laser C $18
GFA BASIC 3.5e $30
Devpac 2 $10
Devpac TT $25

ALL books and ALL programs: $110

From: MDyas@allatsea.demon.co.uk
Message-ID: <194_MDyas@allatsea.demon.co.uk>
Source record: 131072

Hiya All

I've been trying to get an IBM DPES-3180 hard disk drive to work with an ICD Link II, but with little success.

The drive is recognised by the controller, but all attempts to partition it fail with a sense error.

I've tried the ICD software and HDDriver.

Does anyone have any experience of this drive or any suggestions?

Cheers.....Mark

From: dave@mbha.demon.co.uk
Message-ID: <961228Z101906.253dave@mbha.demon.co.uk>
Source record: 131073

Greetings all,

I use modem2 port all the time on the TT. I understand there is an easy mod to connect the modem2 port to the serial2 clock making faster baud rates possible on modem2.

Can anyone come up with a schematic or picture showing where the track should be cut and where the new wire should be soldered?

Alternatively, is there a dolt-friendly ready-assembled or kit hardware mod I can buy. I *must* get 115200 or 150K+ going, being stuck at 38400 is a bummer!

Oh yes, and please bear in mind that in my hands, a soldering iron is a tool of great destruction. Almost thermonuclear in it's destructive potential :-(

Thanks in advance for any help...

"Ambassador ," asked Steven. "Do you really want to know what's going on down there right now?"
"Yes, absolutely," replied gary@the-gap.demon.co.uk.
Steven moved forward, and whispered something.
g>
g>
g> Just thought I'd start a new thread with a more appropriate tile than
g> 'sweet geneva'!

Yes Indeed.

g> With all the problems that us 'crappy' Falcon owners are suffering
g> from, I thought it was about time Andreas made another momentous
g> comment!

Mind you, It is only you Falcon owners. MagiC is as solid as a rock here on my STe for example, I recently switched the machine on at 1pm approx and was working in Papyrus 3 under magic whilst using other programs to halftone images till 1am without a single crash.
g> He's been very quite whilst everyone with a Falcon and Magic has
g> been complaining of the same bugs!!

I don't think he writes the Falcon bits, I think the Behne brothers do but I could be wrong.

g> A) Andreas please comment!!

However, I'd be interested in his response.

g> B) is ANYONE with a Falcon running Magic without the following bugs:
g> Failure to boot: Fatal error in Gemdos!
g> Frequent memory problems. 'Destroyed memory block'!
g> JPEGD locking up.

I think someone mentioned that JPEGD did something naughty and shouldn't be run under multitasking OSs.

I believe Antony Lacey is having no problems :)

g> Maybe it is just us unlucky 'few' as Andreas suggests. But I think
g> not!!

I am inclined to go with Andreas though.

g> Please respond to this thread Andreas. We've paid good money for MagiC
g> and I think we deserve some SUPPORT!!!! Not just arrogant
g> dismissals!!

And a decent manual, Why o Why can't they just update the MAgiC 2 manual to cover version 5 or 6 or at least release MagiC prog docs in english.

See you earlier,

Steven

Yes, some PC's can read extended ST formats but not all due to BIOS
limitations, so don't assume that all PC's can do this.

Hi Simon,

> Some fair comments there ... too much for me to reply on-line with, but
> your software is brilliant and is used everyday on my Falcon !

Thank you very much for this statement! This is the kind of feedback
that I'm mostly missing and which gives me motivation to keep
maintaining the software.

> What does Joe Connor do with my money then ?
> I registered 1stGuide a couple of months ago - ï¿½20 UKP - Did you receive
> that ?

Well, nice to hear that there are really UK registered users.
Joe Connor told me when the first reg. came in several months
ago, but I didn't get the stuff yet because he wanted to wait
for 5 or 10 or so users first before sending me something.

I see now that this is somewhat inappropriate for me because
I can't properly register these accounts until I see the fees.
And until now, I saw nothing. Sorry for your pending registration.
Maybe we should work out a more appropriate scheme...
Anyway, I'm pleased to hear from you and appreciate your comments :-).

> Maybe you should speak to him as I'm sure there must of been many more
> UK registered users as 1stGuide is a very nice piece of software. (It'll
> run better when I get my Nemesis fitted running 640x480xTC will be a
> dream !)

Yes, I spent special effort in proper support for TC modes, and I
recommend such modes for maximum viewing pleasure :-).
Then, I did special adaptions to WINX (V2.3) features which I like
very much.

Best regards,
Guido

Yes, that used to be the case and you could find a document stating it on
Unisys' WWW pages.
Unfortunately, they have now changed their minds and the document has been
removed. Apart from my own correspondence with Unisys, I've heard from other
people who've got exactly the same response.

FreeWare GIF access is apparently no longer possible. :-(
I won't give up until I've been given a straight answer, though, and seen the
licensing documents.

Dealers have been struggling with all but a few IBM SCSI drives over the years. ICD utilities have been able to access only a tiny handful. I'm surprised at the fact that HDDriver couldn't solve the problem - what version are you using?

I've partitioned several different IBM SCSI drives using AHDI/HDX (the Atari hard drive utilities). The last version of the Atari utilities package was AHDI504. I hate to say it, but the Atari stuff worked on a far greater variety of drives than ICD, HDDriver (up to version 5.02 anyway), CBHD, HuSHI and so on.

5597. Toad and Emulators, Inc.

Newsgroup: comp.sys.atari.st
Date: 1996-12-28 00:00:00 UTC
From: rdupuy5596@aol.com
Message-ID: <19961228202800.PAA18778@ladder01.news.aol.com>
Source record: 131086

Just thought I'd warn you all about buying Gemulator 96 from Toad untill they resolve some issues.

Namely, Darek of Emulators, Inc. refuses to support my copy of Gemulator 96 because its not 'registered.' But Toad will not send out registration cards with Gemulator because they say Darek has not sent them any.

Darek says the solution is to return Gemulator to Toad and buy directly from him..(Even though Toad is listed as an authorized reseller on his web page)..this solution is no good because Toad does not accept software returns.

So, I've bought a full version of Gemulator and I am not eligible for the customer newsletter, access to the file download section of Emulators web page, or even advice on how to get the sound or expanded video resolutions to work on my computer (they currently do not work)... and noone is questioning the fact that I bought the retail version of Gemulator.

Also, another bit of advice when purchasing from Toad...they do not keep track of their own specials or pricing. Always remember where you saw the price you are asking for so they can verify it. They will honor their prices, but you must be able to prove it! That is why, when I ordered Gemulator with Magic 4and I recieved Gemulator with Magic 2, I was out of luck... I could not prove that I was supposed to have received Gemulator with Magic 4 at that price ...they said they could rectify the problem for about 50 bucks...later on I found a Magic 2 to 4 upgrade for $20 and they honored that price when I could prove to them where they had offered that price...

I don't want to sound totally against Toad here. To be fair, in some ways they are very professional. My original Gemulator disk was bad, and they speedily rectified that problem. In addition I like the fact that they are open on Saturdays, have a toll free line, and have a quick turn around on orders...

Also, their Web pages have been recently updated...check them out..www.ataricentral.com

5598. Magic Apps Folder

Newsgroup: comp.sys.atari.st
Date: 1996-12-28 00:00:00 UTC
From: faehnle.3@osu.edu
Message-ID: <5a40el$70e@charm.magnus.acs.ohio-state.edu>
Source record: 131087

I just purchased a copy of Magic 5 and remember seeing a discussion on the location of the Magic Apps folder. Could anyone sum up the conclusion to this discussion for me?

I can't find the apps folder, and I can't figure out what it is for. I do know that I am unable to open any applications when my cdplayer is open. All programs seem to work fine, so I thought maybe this has something to do with the apps folder.

Can anyone help?

Thanks,

Matt Faehnle

Oops, accidentally sent before I could finish... =)

The software needs to support MIDI devices for input/output. Also, it must run on a TT030 and work under Magic. Any help would be appreciated. Thanks!

From: dipching@ping.be
Message-ID: <851895284_OASIS_@ping.be>
Source record: 131090

Is there anyone working with the 2.01 version of Avalon Steinberg,
it seems to be the only one version to work with the TT.
Can you help me where to buy one (even second hand) or to get the
update for my 2.0 ?
I have tried to download from the ftp site of Steinberg US but, it
seems that nobody or nothing is on line ... have they forgot the atari
people ...

I was planning to buy Zero-X from Soundpool, but it's not very
comparable to Avalon, virtual synthesis module is missing ... a pity.
Is anybody aware of another soft TT compatible for sample editing
and dumping? (I own an Akai S950 with SCSI from Akai)

A lot of questions ... sure

Spend everybody a nice end of 96 year

Hiya All

I've been trying to get an IBM DPES-3180 hard disk drive to work with an ICD Link II, but with little success.

The drive is recognised by the controller, but all attempts to partition it fail with a sense error.

I've tried the ICD software and HDDriver.

Does anyone have any experience of this drive or any suggestions?

Cheers.....Mark

5604. MODEM2 mod

Newsgroup: comp.sys.atari.st
Date: 1996-12-28 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <5a4aqg$5b2@nr1.vancouver.istar.net>
Source record: 131093

Greetings all,

I use modem2 port all the time on the TT. I understand there is an easy mod to connect the modem2 port to the serial2 clock making faster baud rates possible on modem2.

Can anyone come up with a schematic or picture showing where the track should be cut and where the new wire should be soldered?

Alternatively, is there a dolt-friendly ready-assembled or kit hardware mod I can buy. I *must* get 115200 or 150K+ going, being stuck at 38400 is a bummer!

Oh yes, and please bear in mind that in my hands, a soldering iron is a tool of great destruction. Almost thermonuclear in it's destructive potential :-(

Thanks in advance for any help...

Hi There

Must be something to do with falcons. I have been running MagiC4 and
now 5.3 NVDI 4 and HD driver6 on the TT for ages with very rare problems.

Marcel is a real problem I gave up using it ages ago as even in normal
tos it caused crashes. The aamem prg should be in the app folder etc.
What it does who knows letem fly is really not necessary. What
disk driver are you using the cache system is built into HDdriver and
ICD etc. I found stewart and the other start it etc caused problems.
Since I removed them the system runs very stable. I you use the latest
version of everest it works brillaintly with magic. Using the latest
programs is also recomended. My Old version of Pagestream 2.2 works
fine Calamus Sl works great Papyrus 3+ and 4 are brilliant CAB 1.5 030
also works great.
Regards

Hi Preben.

I've got Laser C (by Megamax) with the Debugger. I think it was one of the last versions produced by megamax. Since Megamax has closed operations 5 years (or more) years ago I don't think they do updates anymore. You could try one of the mail order dealers or an atari swap meet. I picked up mine at a user group flea market about 2 years ago. The manuals are too intensive to ever consider photocopying or faxing at any rate.

There's not much to it. Simply specify (in magx.inf) where you want it
to be thus ...

#_APP D:\GEMSYS\AUTO\

.. or any other drive and path you care to choose.

>I can't find the apps folder, and I can't figure out what it is for.

It just loads Gem programs automatically. The difference being they
all run at once. If you have accessories which are also capable of
running as applications then you could put them in it. That way, you
could terminate them if you needed the memory.

>I do know that I am unable to open any applications when my cdplayer

>d.

Right, for text-based shell accounts the old 2400 gets the job done.
Heck, the Lynx browser on he remote Unix server is much quicker than
Netscape on a 28.8K...

But my problem is that the shell account that my provider has is
'rubbish'!!

Half the time I can't connect, everything is too slow, sometimes my
downloads from Lynx get corrupted, I use Lynx because I have no FTP
access whatsoever, no chat channels for crying out loud! And
now...super slow newsgroup gathering with Pine, you can tell they
upgraded since things are now worse.

I solved that problem by reading my newsgroups with Lynx browser and
sending my replies through an e-mail server that Demon UK has. So
far, works great...only I have to do a bit more to get my replies
typed up :)

Hopefully, I shall get a freaking fast modem soon. If things don't
improve, I shall renounce computer technology as a torture device
to destroy people's sanity and go live with the Amish. :)

Hi Marlin, on 23 Dec 96 you wrote: ...respect, brethren

m>
m> I need the pin outs for the connection on a JVC SC1224 Please I am
m> trying to connect it to a Jaguar.

To do this depends on having a particular make of SC1224, but I can't remember which since I found out that the one I have is the wrong one.

If you don't get a definitive answer here I know that Brad Korda at Best Electronics is one person who definitely does know. I spoke to him at a London Atari Show in 1995 on that very subject.

Sorry I can't be more help...

Source record: 130972

This is a system we bought brand new several years ago. Has Mega4 computer, (4 meg. ram), Keyboard, Mouse, Atari SLM804 Laser printer, Megafile 30 (upgraded to a 60 meg hard disk), HiRes Atari Monochrome monitor, Pagestream DTP program + other programs (drawing, etc.) Lots of fonts. The computers internal floppy drive has been replaced with a much more reliable one. Maintained by local Atari dealer.

We have extra drum, and extra toner cart for Laser printer, all manuals, probably have packing crates. Best offer.

I recently downloaded several KIDPRGS games by Dorothy Brumleve, for my little niece. Unfortunately, none of them work on my STE. I get an Error -33 on all of them. I know that's a File Not Found. I've tried moving the paths around and even tried putting all files on the root of a floppy, but to no avail.

Anyone have any ideas, or perhaps Dorothy's email address? I tried sending mail to her old GEnie address, but never got a reply.

Dealers have been struggling with all but a few IBM SCSI drives over the years. ICD utilities have been able to access only a tiny handful. I'm surprised at the fact that HDDriver couldn't solve the problem - what version are you using?

I've partitioned several different IBM SCSI drives using AHDI/HDX (the Atari hard drive utilities). The last version of the Atari utilities package was AHDI504. I hate to say it, but the Atari stuff worked on a far greater variety of drives than ICD, HDDriver (up to version 5.02 anyway), CBHD, HuSHI and so on.

5627. Toad and Emulators, Inc.

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: rdupuy5596@aol.com
Message-ID: <5a4ruo$5b2@nr1.vancouver.istar.net>
Source record: 131019

Just thought I'd warn you all about buying Gemulator 96 from Toad untill they resolve some issues.

Namely, Darek of Emulators, Inc. refuses to support my copy of Gemulator 96 because its not 'registered.' But Toad will not send out registration cards with Gemulator because they say Darek has not sent them any.

Darek says the solution is to return Gemulator to Toad and buy directly from him..(Even though Toad is listed as an authorized reseller on his web page)..this solution is no good because Toad does not accept software returns.

So, I've bought a full version of Gemulator and I am not eligible for the customer newsletter, access to the file download section of Emulators web page, or even advice on how to get the sound or expanded video resolutions to work on my computer (they currently do not work)... and noone is questioning the fact that I bought the retail version of Gemulator.

Also, another bit of advice when purchasing from Toad...they do not keep track of their own specials or pricing. Always remember where you saw the price you are asking for so they can verify it. They will honor their prices, but you must be able to prove it! That is why, when I ordered Gemulator with Magic 4and I recieved Gemulator with Magic 2, I was out of luck... I could not prove that I was supposed to have received Gemulator with Magic 4 at that price ...they said they could rectify the problem for about 50 bucks...later on I found a Magic 2 to 4 upgrade for $20 and they honored that price when I could prove to them where they had offered that price...

I don't want to sound totally against Toad here. To be fair, in some ways they are very professional. My original Gemulator disk was bad, and they speedily rectified that problem. In addition I like the fact that they are open on Saturdays, have a toll free line, and have a quick turn around on orders...

Also, their Web pages have been recently updated...check them out..www.ataricentral.com

5628. Magic Apps Folder

Newsgroup: comp.sys.atari.st

I just purchased a copy of Magic 5 and remember seeing a discussion on the location of the Magic Apps folder. Could anyone sum up the conclusion to this discussion for me?

I can't find the apps folder, and I can't figure out what it is for. I do know that I am unable to open any applications when my cdplayer is open. All programs seem to work fine, so I thought maybe this has something to do with the apps folder.

Can anyone help?

Thanks,

Matt Faehnle

g> doubt it!!

While I've already expressed my doubts about Magic before now (remember, I still refuse to boot without it so I'm not *that* unhappy with it) I'd also say that it's no good saying that the Falcon hardware is without many faults. We all know that Atari fixed the minimum they could get away with after the first abortive models hit the shelves. ISTM that all the posts we see only confirms that the Falcon is pretty shakyat the best of times with many machines exhibiting individual problems thatput a whole question mark about its build quality.

We've all done some hacking to our machines one way or another so it's hardly surprising when the components fail to gel together on a regular basis even with perfect software. I mean, how many times have you heard about programs performing completely differently on identical hardware (re: CAB/STiK for example)?

From: dipching@ping.be
Message-ID: <5a4u60$5b2@nr1.vancouver.istar.net>
Source record: 131024

Is there anyone working with the 2.01 version of Avalon Steinberg,
it seems to be the only one version to work with the TT.
Can you help me where to buy one (even second hand) or to get the
update for my 2.0 ?
I have tried to download from the ftp site of Steinberg US but, it
seems that nobody or nothing is on line ... have they forgot the atari
people ...

I was planning to buy Zero-X from Soundpool, but it's not very
comparable to Avalon, virtual synthesis module is missing ... a pity.
Is anybody aware of another soft TT compatible for sample editing
and dumping? (I own an Akai S950 with SCSI from Akai)

A lot of questions ... sure

Spend everybody a nice end of 96 year

Return of the Grinch

by James Ricci (with apologies to Dr. Seuss)

Way up in his cave north of Who-ville, the Grinch
Was enjoying retirement; life was a cinch.
He played on his PC and tweaked other hacks
And talked of old times with his aged dog, Max.
He rarely went down to the town of the Whos,
Save to stock up on roast beast and Who-hash and booze.
He preferred not to rub on the slow-healing sore
Of his near-theft of Christmas two decades before.

Well, one day as Grinch sat keyboarding on-line,
Some E-mail arrived of intriguing design:
"Please, Mr. Grinch, let me come visit you."
The message was signed by one "Cindy-Lou Who."
"Cindy-Lou Who," though the Grinch, "Cindy-Lou Who,
"Now, who is this Who name of Cindy-Lou Who?"
He scratched his head hard till his memory expanded -
Ah, she'd been the tot who had caught him red-handed

All those long years ago when, with devilish glee,
He'd been making away with her folks' Christmas tree!
So Grinch swept his cave of its Grinchy debris,
And combed out his fur to receive company,
This Cindy-Lou Who, who was now twenty-two,
A graduate student at East Who-ville U.,
Her voice was no longer the coo of a dove,
But firm and commanding, as if from Above.

She wasted few words in unveiling her plan:
She wanted the Grinch to steal Christmas - again!
"Since your last theft attempt, time has taken its toll;
"Now Who-ville's Christmas deserves to be stole,"
said Cindy-Lou in a most righteous tone
(Grinch captivated by how much she'd grown!).

"Back then when you took all the presents away,
"We Whos nonetheless celebrated the day.
"But now no one holds hands, and nobody sings.
"All we Whos care for is getting more things.
"The radio broadcasts Yule songs in July,
"To pump up the Whos to get out there and buy,
"Lest Christmas morn, when they rise from their sleep,
"The gifts 'neath the tree aren't eleven feet deep.

"The whole, long ordeal leaves most every-Who stressed,
"Exhausted, debt-ridden and deeply depressed.
"Oh, we must stop this madness, we must, must, must, must!
"Before the day's meaning has turned all to dust."

Said Grinch, "Heaven's sakes, Missy, why come to me?
"I can't steal Christmas - I'm seventy-three."
Said she, "Oh, I know that you'll think of a plan;
"You did it before, you can do it again."
Then she gave to old Grinch, to ensure his enthralled-ness,
A daughterly kiss on his male-pattern baldness,
Making him blush underneath all his fur
And vow to himself, "I will do it - for her."

So Grinchy dug out the old Santy Claus suit
That, in the first heist, was his best attribute.
Then he called his dog, Max, and took some red thread,
And tied a big horn on the doggy's old head.
He hitched up the pooch to a ramshackle sleigh,
Which he filled up with sacks for to haul loot away.
Then he waited for darkness to fall on the town,
And told Max, "Giddap," and began the trip down.

On the south edge of Who-ville, a newly built part,
He came to a stop at the giant Who-Mart.
Grinchily sly, he slunk in a side door
And filled up a sack with goods from Aisle 4.
But he saw as he picked through the toys and CDs,
No bag in the world could contain all of these.
All Christmas was stealable two decades before;
Today you could not make a dent in one store!

Just then he heard footsteps and looked up to see
Security guards coming 'round from Aisle 3.
He tugged on the sack, but he just couldn't budge it;
And time was a-wasting, as Grinchy adjudged it.
So he ran from the store, oh, he ran, ran, ran, ran,
Ran faster than ever in his whole life span.
Flogging poor Max like some poor galley slave,
He barely escaped to his hideaway cave.

Looking down on the town, the Grinch pondered his fix:
"Surely there's more in my old bag of tricks."
On what thing, he wondered, did Christmas depend,
The supply of which he, Grinch, might act to suspend?
"Why, batteries, of course!" he told Max (who just looked).
"Without them, this Christmas' goose will be cooked!"
So, with squirt gun and mask, he headed off straight
With Max and the sleigh to the new Interstate.

"When the truck full of batteries comes down the road,"
The Grinch-jacker chortled, "We'll hijack its load!"

Max, for his part, felt unsure and afraid
To be used, at his age, as a street barricade.
At last came the semi, and Grinchy yelled, "Stop!"
And brandished his squirt gun like some kind of cop.
But the truck just roared on, and it knocked the Grinch flat
And crunched through the sleigh - and, well, that was that.

Lucky for Grinch, he'd just joined HMO -
The truck broke his hinch bone and linch bone and toe.
"I can still use my hands," Grinch told Max (who just snored),
And sat himself down at his PC keyboard.
"I'll make a computer bug cripple and maim
"Every Who-ville computer and video game.
"All Christmas purists will surely admire us
"When they see the effects of our cyberspace virus."

And soon had a virus all set too attack.
He was poised to press ENTER and set off the plague
When he heard a loud knock on the door of his cave.
"Police! Open up!" came the shout from outside
The hair stood at attention on Grinchy's scared hide
The cops bashed the door down, the impatient toughs;
They read Grinch his rights, and then slapped on the cuffs.

Through Grinch-prints they'd traced him and made the charge
stand:

Attempted hijacking and larceny, grand.
Another fact made Grinch's plight still more tender -
He might go to trial as a repeat offender.
And so Grinchy landed in Who-ville's Who's-gow
Along with poor Max, his reluctant bow-bow.
They cowered in corners and tried to steer clear
Of guys with tattoos and lascivious leers.

Then one day a visitor came to see Grinch;
His suit looked hand-tailored, each exquisite inch.
Reading his business card, jailbird Grinch saw:
"Robert Shapir-who, Attorney-at-Law."
"I'm taking your case," said the lawyer, "and, too,
"My fees will be paid by Ms. Cindy-Lou Who.
"I'll make you a hero, role model, the works.
"They'll never convict you, the slow-witted jerks."

Shapir-Who sent Grinch super-agent Mike Who-vitz,
Who soon orchestrated a media-zoo blitz.
Newspapers headlined, "Grinch motives were pure."
Talk-show hosts called his confinement "manure."
A hurry-up movie was made of his plight.
He spoke, live, with Who-prah via satellite.
Everyone talked of his brave, lonely quest
To bring Christmas back to an era more blessed.

His fame soon surpassed more illustrious names,
And led to Grinch dolls, bikes and video games,
Which all hit the shelves just in time for Yule sales,
And made for store profits of unheard-of scales.
"Grinch," said Shapir-who, "with this latest deal,
You're sure to be bigger than Shaquille Who'Neal."
Bigger than Shaq? That thought took Grinch aback!
But he did have endorsements too many to track.

At his trial, crowds applauded when Grinchy stepped forth,
Looking nobly self-righteous as Who-liver North.
His lawyer orated, oh, he talked, talked, talked, talked -
And the jury acquitted the Grinch, in a walk.
After, a limousine whisked Grinchy home -
Not too a cave, but a new pleasure-dome
With thirty-four rooms and a house staff of three,
Who toasted with bubbly his being set free.

Next morning, while Grinch lounged in opulent glitz,
Discussing residuals with agent Who-vitz,
The butler announced with pretentious ado,
"A certain Ms. Who has arrived to see you."
Grinch put down his cell-phone and tightened his tie,
And straightened the brow over each Grinchy eye.

But Cindy-Lou scoffed at his mansion and loot,
And, smirking, derided his Who-mani suit.
"I was foolish," she spat, "thinking you'd lift the curse.
"You didn't save Christmas, you just made things worse."
Said Grinch, in a half-hearted, mumbly way:
"I tried to do right - it just happened to pay."
But his high spirits fell, oh they fell, fell, fell, fell,
They could not have fallen more if they'd fell in a well.

And suddenly Grinchy knew what he must do
To regain the esteem of Ms. Cindy-Lou Who.
Straight off he called up his financial advisor,
Knowing his wishes were sure to surprise her,
And he emptied his savings and 401Ks,
Got rid of his stocks and his fat IRAs.
He sold off the mansion and world-class wine cellar,
Sold the cigar boat with corkscrew propeller.

Grinch rented the Who-Dome and gave dinner, free,
To twenty-eight thousand, eight hundred and three.
And not only Whos but all Whats, Whys and Hows
>From neighboring villages, cities and towns.
Homeless and friendless, the rich and the poor -
No living creature was turned from the door.
The menu was Who-hash and prime-rib roast beast,
And plum cakes and loaves of bread baked with Who-yeast.

But before the feast started, all present joined hands
And sang Christmas songs played by two dozen bands.
And all, intermingling, wished all others well,
And couldn't remember so fine a Noel.
Impressed, Cindy-Lou gave the Grinch a great hug
And planted a smooch on his Grinchy old mug.
"You failed to steal Christmas," she whispered, "and yet
"You've set an example we'll never forget."

And afterward, Grinchy went home to his cave,
Quite pleased with himself and the Christmas he gave.
He felt that his heart, once two sizes too small,
Could now scarcely fit inside Carnegie Hall.
"It just goes to show," he said, nodding his head,
"You get more from giving than getting ahead.
"You're richer admired than rich-and-reviled."
He patted the head of old Max (who just smiled).

So now Christmas is over, and New years arrives
What will we all do with the rest of our lives?
The same old promises we made years before,
Will we make them again over and over?
So now to finish this little fun rhyme
I wish a happy new year to all Whos on-line.

You seem to be putting all the blame on Toad, but Darek could and should handle this problem. The first thing he should do is take care of you and get the software you paid for up and running as advertised. He received his money for your copy from Toad when he sold it to them. If not, that is his problem. It should be up to him to contact Toad and handle any conflict he has with them.

This is only my opinion, but I would not purchase any product produced by a company who refused to support it because they had a problem with the re-seller.

> especially their slogan "Power without the Price!"
>
> ==Thanx==
> ===Ben===

Ben, I used to hate it when people said that Atari was dead. But now
its true.
There is no more Atari computer company. Your 'Multisync Switch Box' is
not
only totally unnecessary on new equipment (the need for such was just a
way to
sell monitors anyway), but you can make one yourself with a small platic
box
and a rotary switch. Total cost about $5-$10 and 30 mins to an hour of
work.
So, forgive me if I'm not floored at the loss of the WonderTech and his
super switch box.

Toad prices suck. All Atari prices such. A Pentium 90 w/512K cache,
dual EIDE
controllers, dual 16550 UART serial ports, parallel, full PCI, etc, is
$250!
Add a case, hard disk, monitor, and keyboard - all of which can be had
at your
local sidewalk sale for pennies, and you have a decent machine. Add
Linux for
an OS and you never have to look at MicroSloth either. I hate Intel,
but the
ST just doesn't have the power, and its WAY too expensive to upgrade.
That's
why I dumped the Atari 8-bit - upgrade was too expensive. Now there
isn't any
cheap Atari to upgrade too. Sure a Hades would be great, but if I was
gonna
buy another unsupported piece of hardware, I'd get a BeBox - at least
that has
some upgradeability and a decent price point.

CYA,
Evan

5638. Re: Help! Need ATARI 520ST Hard Drive & (possibly) modem >=9600

> 9600 bps, or possibly faster, then please notify me @:
>
> dimitri@bach.dynet.com

Sorry to say that you'll need to upgrade your TOS ROMs. TOS 1.0 is so
buggy it
will likely destroy most of the data on your hard disk. It REALLY
doesn't like
hard disks! TOS 1.62 doesn't have these problems, and I've heard TOS
1.4 has
fixed some, but has problems of its own. I'd try and get 2.06 just to
be safe.

Second you'll need a way to get a new hard disk interfaced to your ST.
The Link2
was $99 when I bought mine. That plus an external SCSI drive is all you
need. You
can make your own SCSI drive with a small case, power supply, SCSI
drive, mounting
rails, and cables, but SCSI cables can be VERY expensive themselves.
Most Mac
stores should be able to supply you with an external drive. Don't be
surprised if
you can't find one less than 800MB.

For modems, all modems are compatible with the ST. You won't get
maximum speed from
a 14.4 modem from your 19.2K serial port, although you can upgrade the
port to 38.4
and get near top speed, your ST isn't fast enough to do anything else at
that speed.
But the modem itself is cheap. 28.8 modems are about $60 for a cheapie.

5639. English Webspace

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: csilver@kendaco.telebyte.com.NOMAIL
Message-ID: <5a55ci$f1o@news.telebyte.net>
Source record: 131031

Hi All,

A new demo of Webspace (English version) is available at:
http://www.oxo.ch/web_gb.htm

This works better than the previous version on my Falcon. An interesting
note is that Webspace displays p-JPEG's (Greyscale) with no problems even
if JPEGD is installed in the Auto folder. No info, however, if or when
it will be for sale.

One note of caution to downloaders. When you run wespace.tos it creates a
file WEBSPACE./ which CANNOT be easily deleted or renamed from your harddisk
(zero bytes). I always dump downloads into a RamDisk so no harm done, but...

Happy New Year,

Charles

How is it possible to set a color in a GIF to transparent? I read in HTML books that many PC art programs do this for you as the file is saved but they give no technical explanation for it so I've no clue as to how to duplicate the process.

-Jared

Probably should be a new thread, but what the heck I couldn't let this
chance slide by! Has anyone ever tried to track down how many of those
screams for help we get for STIK/CAB are caused by the difference in ISPs
as opposed to the difference in the machines running it! I be willing to
bet that most of the stuff we see is caused by the difference in the
setups needed for the different ISPs, plus a little due to software
conflicts!

I have indeed had success myself with this conductive ink/paint [as
sold in car supply shops to repair the 'window-heating' (?)] before I
wrote my message. But the solvent used tends to react with the mylar
and the conductor too and it takes a few retries to get it working.
In my case(s) [3 keyboards] it did however last forever then.

Because I am a skilled technician and still had some trouble with it,
I wrote 'virtually not repairable', but of course it IS still
possible. With a little luck.

Hi,

Yes I am spreading this message as I need some help if poss...

My copy of Player Manager (Kick Off2) has apparently corrupted. I recently had my STf upgraded to 4Mb and now PM won't work properly. It boots but as soon as you move the mouse 3 bombs and it goes. *No* other app suffers this so I assume its the disk. (I've unplugged everything, tried the connectors for the mouse/joystick and stripped the mouse too).

Now I know its copy protected but maybe copies of another of the two main .prg files could do the trick...?

Can someone help me? I am assuming ANCO is gone now???

OR... if you have a copy and don't want it can I have it?

ALSO: I have a shareware editor for PM too. It never worked because it seemed my file format was different than that of the authors. (He tried to load some of my PM created teams and couldn't - getting the 3 bombs!!).

So that's why I sus the disk...

Any help much appreciated.

Mark.

] I can't find the apps folder, and I can't figure out what it is for. I do
] know that I am unable to open any applications when my cdplayer is open. All
] programs seem to work fine, so I thought maybe this has something to do with
] the apps folder.

Hi Matt,

The APPS folder was the default directory under older versions of MagiC. In
version 5 (perhaps 4 as well?) it changed to START. MagiC will automatically
run any .APP it finds in the START folder (also .PRG IIRC).

The magic.inf (config) file contains a line in which you can declare any
folder name as the autorun directory.

Hope this helps, can't help with the CDROM, I haven't got one :-(

I'll have to have a chat with the missus.

5648. Atari Prototypes Auction #1 (Update #1)

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19961229153100.KAA09703@ladder01.news.aol.com>
Source record: 131040

ATARI PROTOTYPE AUCTION #1: (UPDATE #1 12/29/96)

The following RARE items are available for auctioning.

RULES: Bids start at specified price and will go up in $10 increments. Updates will be posted daily to all bidders. Auction will go until Jan 10th 1997 and will then enter the GOING, GOING TWICE, GONE stage. All bidders who make it to the GONE section of the bidding are responsible for shipping costs. All items will be shipped PRIORITY ONE MAIL. Please don't bid unless you are serious about buying. All items are sold "as-is" and there will be no returns and/or refunds. No items will be shipped until payments are received and cashed.

Atari SALT Diagnostic Module: Enclosed in an Atari 850 interface, has 1 Serial SIO port, 4 Atari RS232 ports, power input, an RCA plug where the Parallel intreface would normally be, and 2 14 pin chip sockets, an HP seven segment ultra-bright LED display and reset switch. Unit powers on and doesn't cause any Atari that was hooked up to it to freeze. Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (3 Available) Minimum BID: $50.00ea.

BID: $50.00 MKyle

Atari XL Salt Diagnostic Module: Enclosed in an Atari 850 interface, unit has PBI cable comming out of right side SIO connection cut-out of 850 module for testing parallel bus interface.
Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (1 Available) Minimum BID: $75.00

BID: $75.00 MKyle

EXTREMELY RARE: Atari 6402A Prototype Motherboard (only 3 exist!!!) Prototype motherboard, apparently a test bed which has all the same components contained on an Atari 1450XLD "TONG" version motherboard including disk drive controller area, modem area, SC-01 voice synthesiser, Parallel Bus Interface. This unit has ports positioned on all 4 sides and does not appear to be a "commercial" product but appears to be more of a test design to condense the Atari 1450XLD TONG motherboard down to about 1/2 the size, (unit is NOT functional)
Minimum bid $120.00
Image will be posted on my webpage upon request

BID: $120.00 MKyle

Atari XE Game System 8 port multicart prototype board:
A prototype test board which may have been a pre-design idea to allow the XE game system to contain and select up to 8 cartridges (this of course turned out to be built in BASIC and MISSLE COMMAND in the released version) The board is about 8" by 12"
Minimum Bid $50.00
Image will be posted on my webpage upon request
BID: NONE

Atari XEP-80 Prototype:
Atari Corp design prototype of the XEP-80 system. Design consists of a mainboard, daughter card, DB-25 connectors and Atari joystick interface cable, this unit has never been tested and I am not sure if the current commercially released XEP-80 software will work on this pre-design prototype.
Minimum Bid: $75.00
Image will be posted on my webpage upon request

BID: NONE

Make all bids and requests for images to:

>its build quality.

I use Magic a lot too! I'm not saying that it's crap and unuseable. But it
does have problems that Andreas refuses to acknowledge!
I'm also not saying that Falcon hardware has no faults. But my Falcon is a
TOS4.04 based one. Certainly not one of the 'first abortive models'!!
The fact that MagiC has problems with some Falcons should:

a)be mentioned when purchasing MagiC and a refund offered

b)Andreas et al should make some effort to sort it out!! After all, we are not talking shareware here, we are talking a commercial product that people pay a lot of money for! And the support is dreadful! I'm sure MagiC must have quite a few bugs in it, but you never see a new version or any patches. Is there actually any ongoing development/improvement?

>We've all done some hacking to our machines one way or another so it's hardly
>surprising when the components fail to gel together on a regular basis even
>with perfect software. I mean, how many times have you heard about programs
>performing completely differently on identical hardware (re: CAB/STiK for
>example)?

Oh dear. The fact is that Ataris are a hobbyist machine. And as a hobbyist machine there are numerous 'hacks' and bolt-ons that can be done to improve it. I for one am still waiting for my Nemesis board.
I don't think the attitude of 'ah well, it's my fault for improving my machine' is a healthy one.
Using the STiK/CAB analogy, at least the authors are trying to make it compatible with all machines (and I know it's not easy). The big point is that Andreas gives the impression that he couldn't give a stuff!!

Cheers, Gary

From: gary@the-gap.demon.co.uk
Message-ID: <97011493_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 131042

Having waited patiently (and seen several delivery dates go by), I just wondered if anyone knows when we are likely to get our much awaited Nemesis boards from Titan Designs?

I for one am extremely keen to get my hands on it! It will breathe a new lease of life into my Falcon!

Anyone got any ideas?

At least Tritan Designs have done the decent thing and not debited my credit card yet! Good on 'em for that!

Cheers, Gary

Hi...

I am wondering what am I doing wrong here...

I have a SLM804 lazer printer, SCSI hard drive and CD rom drive, and my computer...

I turn on the printer first, the green light goes on.
I then turn on my hard drive, it boots up
I then turn on everything else at once (power strip)

It used to work perfectly fine...now it won't boot off the hard drive. The only thing done recently was done was to make sure it had a toner and drum in it and that was it. Do I have to have my printer at a certain dip switching? If so...what would it look like? Please respond to me here or at my other e-mail address of PenneyGuy@AOL.COM and I will get back to you either way...Thanks...

From: jaubrey@jaubrey.demon.co.uk
Message-ID: <851963038_OASIS_@jaubrey.demon.co.uk>
Source record: 131046

I am having problems getting STiK v1.11 to work. I have ATM v1.08
which works fine. I tried swapping the ACC to the new version and it
dails ok but when I enter a programme it bombs out(2). It doesn't
matter if its CAB, IRC or TELNET it still bombs out. I've switched
back to the old version for now. Any ideas what the matter could be?
Do I need another PRG in the auto folder or something...?

Thanks

James

PS Happy new year to all Atarians far and wide ;)

I can understand his position - an International draft costs me US$12
in fees, on top of the amount to be sent overseas, so unless I were to
charge an extra $12 per registration (a VERY bad idea, IMHO), I would
want to wait until I had several to bundle up and send all at once, also.

5658. NEWSie...There is a God!!

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: lobo@vicon.net
Message-ID: <5a70js$rpl@news.emi.com>
Source record: 131050

I downloaded the latest STiK, CAB030 v.1.5, and NEWSie. Finally, FINALLY, my TT030 is 100% internet usable. CAB and STiK have been completely erratic for me ever since I got my TT last spring, making them only usable to show friends that it's possible to use the internet with an Atari. But, low and behold, the new CAB/STiK is just amazing! I used it for hours with not a single bomb! The only thing it really needs now is frames capability and it will be perfect for me. Congrats to all involved in making this great software.

But what really, really made me happy is NEWSie! I use usenet news more than any other internet tool and have been dying for a news reader for my Atari. Not only is it an Atari newsreader, it's a GREAT newsreader by any standard on any platform. Very easy to use, offline reading, just perfect. And the email part of it is totally reliable and easy to use, much more so than antmail. Thank you so much to whoever wrote this excellent software!!

In case you want to know, I'm writing this as CAB is loading in a website, NEWSie is connected to this newsgroup, and I got MOD's playing at 50kHz, all at the same time and very smoothly (thanks to Magic). Happy Holidays all!!

CAB comes with a small utility to do this and Imagecopy (commercial)
will save both transparent and interlaced GIFs.

Might want to try running make1meg.prg first then hitting the reset button
to load the game. Some older games don't seem to like more than 1 meg in
an ST, this seems especially true of older stuff from the UK! Don't have
that game, but your message said you recently went from 1 to 4 megs and I
experienced the same thing with several games when I did that! Railroad
Tycoon was one of them.

5661. Real Audio For Atari?

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <5a6ibv$19v@einstein.ebicom.net>
Source record: 131053

Just a Falcon owner wondering if anyone is working on a Real Audio player for TOS machines. If so...how's it coming? How long til you start taking registrations?

For those who don't know what real audio is...it is a method for sending audio over the web/net that plays in real time as you recieve it, as opposed to downloading a wav, au, aiff, mp2 file etc....
This also makes for a neat "Live Voice Chat" kind of hook up over the web. Most TOS machines should be able to do this!

Brian

>I can't find the apps folder, and I can't figure out what it is for.

The Apps folder isn't a specific folder, it is a folder which you can
set freely by changing/adding the #_APP variable in your MAGX.INF,
this is explained briefly in the manual. Any programs in this folder
will be started when MagiC has finished loading up, it is different to
the Auto folder in that it can contain proper fully fledged
applications including those that use GEM.

>I do
>know that I am unable to open any applications when my cdplayer is open. All
>programs seem to work fine, so I thought maybe this has something to do with
>the apps folder.

It doesn't sound like it to me. But is for example you use Extendos,
you have an option of using an Accessor CD Player and a normal GEm
Program version, you can forget about the ACC and just put the normal
version into the APP folder which means you have a free ACC slot and
can remove the program from memory if you want to.

A SCSI device is a SCSI device, any SCSI device should work fine witht
he exception of some Quantumn models that need BUS Arbitration but if
you are using HD Driver then this should not be a problem. So in
short I am very confident that it will work.

5667. C Tutorial Begins January 1st

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: rdupuy5596@aol.com
Message-ID: <19961229203000.PAA17365@ladder01.news.aol.com>
Source record: 131059

OK, check out the newsgroup comp.sys.atari.programmer if you would like to learn the programming language 'C'

Classes begin January 1st and will go on for about 15 lessons..

I will be using Laser C by Megamax, but will be sticking to subjects relating mostly to ANSI C and will not get compiler specific (I will keep away from getting Atari specific for a while, unless there is great demand)

I have seen a copy of Laser C for sale in this newsgroup as well as from various other sources, let me know if you need a copy I might be able to help.

If you are interested, it is a good idea to let me know...feedback is a great motivator and will greatly ad to the general success of the thread.

---Robert Dupuy

p.s. Laser C is compatible with the Gemulator 96 demo... if you have windows 95 and copy the original system disks while in Atari Disk Mode. Anyone who owns a pc can download the Gem96 demo from www.emulators.com and then go out and buy yourself a copy of Laser C!

From: jklimch@larry.cc.emory.edu
Message-ID: <5a6p9p$4j5@larry.cc.emory.edu>
Source record: 131064

Help, I installed HDDriver & now I can't get into my Falcon's internal drive. Here's what I did. First I installed HD Driver (6.0) on my falcon's internal drive (the standard Connor 63 meg type) Also hooked up was a Syquest 105 removable in SCSI id 0. No problems. worked like a charm. Feeling good about this, I removed the Syquest & installed my new jaz drive as drive 0. I formatted it & once again it worked like a charm. Then comes trouble... I changed the ID of the Syquest to 1 figuring I'd transfer my old data to the jaz. Reconnected scsi bus turned on the power & no hd boot. I can now boot from the jaz as a c partition but I can't access the ide drive. When I turn off the scsi chain & reboot with only the internal hd the message I get is HD driver 6.0 no partitions available. This is true even when I boot without a floppy in the machine so the falcon must be reading HD driver from the IDE drive but then nothing. The computer boots up with only a & b floppy drives & won't install any other devices. If I use the ide parameters section of hdutilities it shows the existance of the connor ide drive but I can't seem to get to boot it in any way I can think of. Does anybody have any ideas?

Thanks in advance,
David Klimchak

Sounds great, sign me up then! :)

I am hoping that you may eventually get to some Atari functions like AES
in later lessions. Other than that, I guess any C compiler can be used.
I got GST C which is ok.

Date: 1996-12-29 00:00:00 UTC
From: SBagley@cameo.co.uk
Message-ID: <5a4dbf$5b2@nr1.vancouver.istar.net>
Source record: 131105

"Ambassador ," asked Steven. "Do you really want to know what's going on down there right now?"
"Yes, absolutely," replied gary@the-gap.demon.co.uk.
Steven moved forward, and whispered something.
g>
g>
g> Just thought I'd start a new thread with a more appropriate tile than
g> 'sweet geneva'!

Yes Indeed.

g> With all the problems that us 'crappy' Falcon owners are suffering
g> from, I thought it was about time Andreas made another momentous
g> comment!

Mind you, It is only you Falcon owners. MagiC is as solid as a rock here on my STe for example, I recently switched the machine on at 1pm approx and was working in Papyrus 3 under magic whilst using other programs to halftone images till 1am without a single crash.
g> He's been very quite whilst everyone with a Falcon and Magic has
g> been complaining of the same bugs!!

I don't think he writes the Falcon bits, I think the Behne brothers do but I could be wrong.

g> A) Andreas please comment!!

However, I'd be interested in his response.

g> B) is ANYONE with a Falcon running Magic without the following bugs:
g> Failure to boot: Fatal error in Gemdos!
g> Frequent memory problems. 'Destroyed memory block'!
g> JPEGD locking up.

I think someone mentioned that JPEGD did something naughty and shouldn't be run under multitasking OSs.

I believe Antony Lacey is having no problems :)

g> Maybe it is just us unlucky 'few' as Andreas suggests. But I think
g> not!!

I am inclined to go with Andreas though.

g> Please respond to this thread Andreas. We've paid good money for MagiC
g> and I think we deserve some SUPPORT!!!! Not just arrogant
g> dismissals!!

And a decent manual, Why o Why can't they just update the MAgiC 2 manual to cover version 5 or 6 or at least release MagiC prog docs in english.

See you earlier,

Steven

Yes, some PC's can read extended ST formats but not all due to BIOS
limitations, so don't assume that all PC's can do this.

Just thought I'd warn you all about buying Gemulator 96 from Toad untill
they resolve some issues.

Namely, Darek of Emulators, Inc. refuses to support my copy of Gemulator
96 because its not 'registered.' But Toad will not send out registration
cards with Gemulator because they say Darek has not sent them any.

==========
well, if you have the original receipt for your payment for the product they
should be sensitive and honor your registration. I guess they could just send
you a card!

It is Toad dutty to supply the regist. card and the dealers respons. to make sure that the
card is there.

If you paid for a new product you have the right to get the support you also paid for.

guitarra

5678. Question about System Solution Monitor Box?

Newsgroup: comp.sys.atari.st
Date: 1996-12-29 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <5a4dv4$gcc@huron.eel.ufl.edu>
Source record: 131108

Hi all: I have a box from system solution that I got with an ST. The Box has
an out put for Monochrome monitor and one also for color. It also has a video
output. Is this output ready for VCR video or is it one that has to be connected to the TV antena
in order to be used?

Thanks, guitarra.

Source record: 131109

Hi Simon,

> Some fair comments there ... too much for me to reply on-line with, but
> your software is brilliant and is used everyday on my Falcon !

Thank you very much for this statement! This is the kind of feedback
that I'm mostly missing and which gives me motivation to keep
maintaining the software.

> What does Joe Connor do with my money then ?
> I registered 1stGuide a couple of months ago - ï¿½20 UKP - Did you receive
> that ?

Well, nice to hear that there are really UK registered users.
Joe Connor told me when the first reg. came in several months
ago, but I didn't get the stuff yet because he wanted to wait
for 5 or 10 or so users first before sending me something.

I see now that this is somewhat inappropriate for me because
I can't properly register these accounts until I see the fees.
And until now, I saw nothing. Sorry for your pending registration.
Maybe we should work out a more appropriate scheme...
Anyway, I'm pleased to hear from you and appreciate your comments :-).

> Maybe you should speak to him as I'm sure there must of been many more
> UK registered users as 1stGuide is a very nice piece of software. (It'll
> run better when I get my Nemesis fitted running 640x480xTC will be a
> dream !)

Yes, I spent special effort in proper support for TC modes, and I
recommend such modes for maximum viewing pleasure :-).
Then, I did special adaptions to WINX (V2.3) features which I like
very much.

Best regards,
Guido

>I use modem2 port all the time on the TT. I understand there is an easy mod to
>connect the modem2 port to the serial2 clock making faster baud rates possible
>on modem2.

You need to go faster than 153600? that's the top speed shown for
Modem2 in my Fserial CPX.

>Alternatively, is there a dolt-friendly ready-assembled or kit hardware mod I
>can buy. I *must* get 115200 or 150K+ going, being stuck at 38400 is a bummer!

My modem won't respond at anything above 57600 (which is not on Fserial
- it goes from 38400 to 76800) but then it's only a Supra 144LC. One
can't really complain too much about a $3 modem. <G>

>Oh yes, and please bear in mind that in my hands, a soldering iron is a tool
>of great destruction. Almost thermonuclear in it's destructive potential :-(

>What works on the ST? And where can I get one?

Anything thart works on the Atari 2600, C64, or Atari 800 series. You
can usually pick one up at Goodwill for a buck or two. Alternatively,
contact Ben Smith (advertises in this newsgroup regularly) and see what
he has. Personally, I prefer the Epyx 500XJ.

Yes, that used to be the case and you could find a document stating it on
Unisys' WWW pages.
Unfortunately, they have now changed their minds and the document has been
removed. Apart from my own correspondence with Unisys, I've heard from other
people who've got exactly the same response.

FreeWare GIF access is apparently no longer possible. :-(
I won't give up until I've been given a straight answer, though, and seen the
licensing documents.

Out of the ether, the following was mentioned by atari@teleport.com...:

a> Consider that next time you see a bit of flamebait outside of
a> alt.flame - the ISP doesn't need the idiot NEARLY as much as he needs
a> the ISP. Tell his postmaster - and wave bye-bye to the jerk.
Ahhh, but based on your numbers then if someone like AOL were to eject every jerk on there who posts flame bait then they would go bankrupt (chapter 11) before very long.

Many ISP's make money based on the number of people they cover, not the amount of bandwith they supply. Therefore they would rather have 1000 gits with sod all bandwith rather than 10 with plenty of bandwith!

If you get my point that is.

Now on the Atari point generally only those who are fully committed to the platform and don't have money to burn (unlike the typical American stereotype we get this side of the pond) are likely to stick with it and be "connected".

Now I have noticed that the complete number of fools on the Atari has reduced considerably as the number of wizz bang products have dried up.

I link such behaviour to available brain processing power. The less flash a product the more thought required to handle it. Therefore those with less brain power than average tend to end up on PC's or Mac's ;-)

Ok, so i've owned and used both in my time but don't hold that against me! ;-> I sold the mac Quadra 840av and bought a TT/Matrix TC1208e and only own one pentium based machine. I still own an STFM and a Falcon (I sold the STe and Jaguar :-)

And the only reason for my owning the PC is the availability of flashy wizz bang products which require less brains than the average person has! ;->>

But then I have never been your average Joe (sorry to all those Joe's out there, especially Mr Connor ;-)

Spencer

5687. MagiC 5 patch?

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <25500_hsideras@mettav.demon.co.uk>
Source record: 130917

Hi John, on 28 Dec 96 you wrote: ...respect, brethren

j>
j> I've just been looking around Toad's Atari site and found a free patch
j> program for MagiC 5 (at http://www.ataricentral.com:80/magic/atari).
j> However there doesn't seem to be any information about it. Does anyone
j> know what it patches and how you use it?

Is this magpatch.ttp? It ought to have docs in an archive called MPATCH14.
If so, the most recent I've seen is as follows:

```
------------------------------------------------------------------------
MagiC IDE Patch v1.4 (October 12, 1996)
Written by Daniel Hedberg of New Beat Development

WHAT THIS PATCH DOES
------------------------------------------------------------------------
MAGPATCH.TTP forces MagiC to skip the check for internal IDE drives on
Atari Falcon030 computers. This check is very annoying on systems with
only SCSI devices, as it takes MagiC forever to discover there are no IDE
drives present.

This version is able to patch version 4.01, 4.02, 5.00, 5.01, 5.02, and
5.03 of MagiC. Make sure you have a backup of the MAGIC.RAM file before
you try to patch it. If MagiC does not work after the patch is done,
replace the patched MAGIC.RAM with the old one. Of course it is always
possible to re-install MagiC as well.

I take no responsibility whatsoever for this patch, you are entirerly on
your own if you intend to use it.
------------------------------------------------------------------------
I've never heard of any problem with it.
```

Source record: 130919

Out of the ether, the following was mentioned by taf@io.org...:

t> Has anyone connected a U.S. Robotics 33,600 baud modem to modem port 2
t> on their TT (or any TT port for that matter) and successfully
t> downloaded large files at a sustained rate of 3000 cps?
I've a USR Courier V.34 upgraded to 33.6k and when I get a good highspeed connect (I generally get 28,800, but have occaisionally got 31,200 and once managed 33,600) I tend to get a download speed of around 2600-2800 cps using Serial 2.

I never did manage to get a good reliable download using Modem 2 as I believe it uses the standard MFP 68901 chip as used in the ST where as Serial 2 uses the Zilog SCC chip which is similar in spec to the 16550 UART which PC's tend to use (actually better than it).

I would therefore suggest using Serial2 in conjunction with HSModem for your modem connections on your TT.

Spencer

d>
d> I use modem2 port all the time on the TT. I understand there is an easy
d> mod to connect the modem2 port to the serial2 clock making faster baud
d> rates possible on modem2.

Am I misunderstanding something here? Modem 2 is capable of at least 115k2
in its unmodified state. I'm using 57600 on Modem 2 with a Mega STe (same as
the TT) with Semper, STiK and CixComm.

d> I *must* get 115200 or 150K+ going, being stuck at 38400 is a bummer!

Is this a limitation of the terminal you use? In cases like that I reassign
the lower baud rates in conjunction with HSModem's SCC.PRG.

Source record: 130921

Hi Matt, on 29 Dec 96 you wrote: ...respect, brethren

f>
f> I just purchased a copy of Magic 5 and remember seeing a discussion on
f> the location of the Magic Apps folder. Could anyone sum up the
f> conclusion to this discussion for me?

In the root directory of your boot drive you ought to have a MAGX.INF file.
In the section *before* the line that says #_CTR ensure that you have the
following statement:

#_APP C:\AUTO\APPS\

f> I can't find the apps folder, and I can't figure out what it is for.

If the folder isn't there, just create it. AIUI you can actually direct this
folder to be anywhere and call it anything you like, but putting it inside
your Auto folder seems to make sense (it may already be named
C:\GEMSYS\MAGIC\START\ or summat which seems to be a throwback to the
convention started with Magic 3 IIRC).

It's used as an alternative to accessories, which aren't perfectly in tune
with the concept behind Magic. Pretty much any utility that can run as both
an ACC and a PRG can be renamed to PRG or APP and bunged in Auto\Apps\ and be
available immediately you hit the desktop.

Message-ID: <5a78voofd1@mhafc.production.compuserve.com>
Source record: 130975

>>Is there anyone working with the 2.01 version of Avalon Steinberg, it seems to be the only one version to work with the TT. Can you help me where to buy one (even second hand) or to get the update for my 2.0 ? I have tried to download from the ftp site of Steinberg US but, it seems that nobody or nothing is on line ... have they forgot the atari people ..

I was planning to buy Zero-X from Soundpool, but it's not very comparable to Avalon, virtual synthesis module is missing ... a pity. Is anybody aware of another soft TT compatible for sample editing and dumping? (I own an Akai S950 with SCSI from Akai)

A lot of questions ... sure<<

Try this ftp site ftp.mcc.ac.uk go to the pub area then the music file area.

Being that I too have a S950 with SCSI (the S950 doesn't support SCSI dumps) you'll have to settle for slow MIDI Sample Dumps. I've used Avalon on my Stacy (I have a 16Mhz accelerator) and its very picky but worked good with the S950. Avalon won't work on a Falcon and I've never heard that it worked on a TT and it only worked on MegaST at 8Mhz.

I do miss the Virtual Synth engine, but it was soooo slooooow. Zero-X works much better with a Falcon because it uses the DSP.

Good Luck

Rich

5694. logic audio hard drive requirements?

Newsgroup: comp.sys.atari.st

From: guitarmn@earth.execpc.com
Message-ID: <5a7a2q$j8a@newsops.execpc.com>
Source record: 130976

Hi, everyone. I've been experiencing trouble getting logic audio 2.0 to play all 8 tracks on my falcon 030. Does the data transfer rate and access time of the hard drive matter as much as the length of the audio regions? I guess what I'm asking is, if I had a 1gig hard drive, 10ms seek, 5mb throughput, would that be enough? If I need to get a drive with such specs I'll do it to have all 8 tracks running separate samples, but if the ram won't allow such playback due to region length, I guess I'm stuck w/only 4 tracks at a time regardless of hard drive, correct? Also, what are some opinions on cubase 16?
Thanks in advance. Feel free to e-mail me at guitarmn@execpc.com, even if you don't have the answer and just want to talk Atari music/midi.

Toad for the most part has been good to me. Only a couple of minor problems.

On the Gemulator thing, send Darek a copy of your receipt from Toad. That might help. BTW doesn't Darek work for Microsoft?

>>The software needs to support MIDI devices for input/output. Also, it must run on a TT030 and work under Magic. Any help would be appreciated. Thanks!<<

If it must run under MagiC I know that Emagic's Logic works with MagiC. Its a full midi composing package. Cubase doesn't work with MagiC. On the cheaper end you could try Ithink its called Sweet16. I don't know any MOD programs.

|Hiya All
|I've been trying to get an IBM DPES-3180 hard disk drive to work with
|an ICD Link II, but with little success.
|The drive is recognised by the controller, but all attempts to
|partition it fail with a sense error.
|I've tried the ICD software and HDDriver.
|Does anyone have any experience of this drive or any suggestions?
|Cheers........Mark
Well, not with an IBM drive... but I partitioned an old clunker of a Hewlett Packard using Diamond Edge, juggled the partition start sectors until there weren't any (I hope!) bad sectors in the boot, root, and FAT sectors, and wrote the bad sectors to the FATs. This sounds harder than it actually was - take my word for it, if I could do it, you can too. Seems to me that I also had to use ICD to finish the job, but I really don't remember. I tried this after many failures with Ahdi and the ICD software.
I fought with a Rodime for months, and couldn't get it to work, nohow. I have been using the HP (Coyote) drive for many months after this stunt - no troubles at all. Give it a try! Remember, you can't damage any data at this point! So push those buttons! Always answer 'go for it!' when the machine asks. L'audace! Toujours l'audace!

TM> compensation.

That's right AFAIAA. The following *edited* extracts come from the Graphics File Format FAQ - see section 3 in particular:

==========
Subject: 6. Is it now illegal to use CompuServe's GIF format?

It is not illegal to own, transmit, or receive GIF files (provided that no unlicensed compression and/or decompression of the files occurs). You must realize, however, that GIF files are not the issue. The issue is, in fact, the LZW data compression algorithm.

In 1994, Unisys and CompuServe came to an understanding whereby the use of the LZW algorithm would be licensed for the application of the GIF file formats in software. Published information indicates that Unisys licensing policies are as follows:

1) Unisys considers all software created or modified before January 1, 1995 that supports the GIF and/or TIFF-LZW formats to be inadvertently infringing upon its patent; Unisys will therefore not require a license for GIF software products delivered before January 1, 1995. Unisys will therefore not pursue legal actions against such pre-1995 software products.

2) However, Unisys expects developers of commercial or for-profit software to obtain a GIF-LZW license agreement from Unisys if, after December 31, 1994, the developer creates new software or updates or modifies existing software, or issues a new release of software that supports the GIF file format.

3) Unisys does not require licensing of non-commercial, not-for-profit software applications that support the GIF file format.

4) With respect to TIFF, if a license is entered before July 1, 1995, there will be no liability for pre-1995 software with respect to that software's support of TIFF which uses LZW.

Realizing that you have many questions about GIF-LZW and TIFF-LZW licensing, the remainder of this section is arranged in a Question/Answer format to help convey information about this subject more clearly.

Q: How does this agreement affect my use of GIF and TIFF files?
A: It does not affect the ownership, transmission, or reception of GIF and TIFF-LZW files themselves. Only the software that performs compression and/or decompression of GIF may be effected in any way by license agreements. You are free to store and transport GIF and TIFF-LZW files without fear of legalities or cost from the Unisys licenses provided that any compression and/or decompression on GIF files is performed by licensed software, or by software products delivered prior to 1995.

Q: Which agreement do I need?
A: If your software supports only GIF then you need the GIF-LZW agreement. If it supports TIFF-LZW or both GIF and TIFF-LZW then you need the TIFF-LZW and GIF-LZW agreement.

Q: My software supports TIFF-LZW, but not GIF.
A: You still need to obtain the TIFF-LZW and GIF-LZW agreement.

Q: So if my software only supports non-LZW versions of TIFF and PS Level II I don't need to worry about obtaining a license agreement?
A: That is correct. Only software that is capable of using the LZW algorithm requires an agreement. This includes all software that supports the GIF file format.

Q: I use LZW in my programs, but not for GIF or TIFF graphics. What should I do?
A: If you are not a business, and the programs are for your own personal non-commercial or not-for-profit use, Unisys does not require you to obtain a license. If they are used as part of a business and/or you sell the programs for commercial or for-profit purposes, then you must contact the Welch Patent Licensing Department at Unisys and explain your circumstances. They will have a license agreement for your application of their LZW algorithm.

Q: How much does a license cost?
A: For a GIF-LZW license there is a $25US non-refundable registration fee to start. You will then pay 0.451f the selling price of your software per unit sold per calendar quarter with a minimum of $0.10US and a maximum $10US per unit. For a TIFF-LZW and GIF-LZW license, the non-refundable registration fee is $50US and you will pay 0.651f the selling price of your software per unit sold per calendar quarter, with a minimum of $0.20US and a maximum of $25US per unit. The license agreement contains various other terms and conditions, such as those which define the field of use.

Q: Do I need a separate license for each GIF-using software product I sell?
A: If you sell three products that all use the GIF format, for example,

then you will need only one license. License fees must be paid for each product sold.

Q: Do I need to obtain a new license if I release a new version of my software?
A: No. However, a license fee is required for each update, improvement, or enhancement of your software that is sold.

Q: What if I give my software away?
A: If you distribute for free your product directly to end-users for their personal use and your distributing the software is non-commercial and not-for-profit use and you receive no financial gain (such as Shareware donations, royalties for CD-ROM distributions, or as advertising to attract for-profit business), then you do not need a license.

Q: But what about Shareware donations?
A: Each Shareware "payment" you receive is considered the selling price of that unit. Whatever a user pays to you for your GIF-using software is required to be included in your quarterly license fee payment to Unisys. However, minimum license fees per unit must be always paid.

Q: My Shareware GIF software is being sold for-profit on a CD-ROM, but I do not make any profit from its sale. Can I get in trouble? Do I need a license?
A: The person/business that is selling your program for profit on their CD-ROM is responsible for obtaining the proper license. You would only need a license if you received any payments from the CD-ROM vendor or from users of your Shareware.

Q: On what Usenet newsgroups is this LZW agreement being discussed?
A: You will find threads appearing on comp.graphics and other related graphical newsgroups. The official newsgroup where much discussion takes place is alt.gif-agreement.

Q: What are my alternatives to GIF and TIFF-LZW file formats?
A: The most popular alternative is JPEG compression and the JFIF file format. JFIF-JPEG files are smaller and store far more colors than GIF files. Another newer alternative is the PNG format, which is currently under development (see the section "PNG - Portable Network Graphics" in Part 3 of this FAQ). PNG is unencumbered by patent licenses and has much potential and promise in replacing GIF. But, most software that supports PNG will likely have been written after January 1, 1995, so make sure that your GIF-to-PNG conversion program has the proper Unisys license.

Disclaimer: The information in this FAQ regarding the Unisys LZW licensing agreement has been presented in an attempt to allow the reader to understand some of the legalities they may face by the use of the LZW algorithm. The author has rendered this explanation and example questions using the most accurate information available to him at the date of this FAQ. In no regard should this text be considered an official publication of Unisys Corporation or a legal representation of the policies of Unisys, or in any way obligating Unisys to enter into a license agreement based upon the terms,

interpretations, and/or answers to question provided in this te

5701. Atari stuff forsale (mostly games)

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: dav@cc.gatech.edu
Message-ID: <5a7k51$qnh@solaria.cc.gatech.edu>
Source record: 130983

Atari stuff forsale.

All prices include shipping. Will reduce the price if you take large quantities of stuff. I will sell on a first come first serve basis UNLESS someone makes an offer for the whole bunch. (If you think any of the prices are outragious, make an offer.)

Once again, all the prices include shipping.

Hardware:

SC1224 color monitor $90

SH204 (20 meg harddrive) $50
(It works. You could use the controller and box and replace the disk)

Toadfile 129X (85 meg harddrive, 44 meg Syquest, clock card)
with 8 syquest disks $325

SF314 (External Floppy Drive) $35
SF314 (External Floppy Drive) $35

Spectre GCR w/ ROMs $125

Yamaha Rx21 Rhythm Machine (midi ready) $110
& Casio MT-240 (midi ready)
& Atari Midi book w/ disk of software

Games: (All in original boxes with docs) (Buy a bunch and every fifth one (sorted by cost of course) is free.) (Or take it all ($573) for $375)

Pirates of the Barbary Coast $3
Astaroth $8
Dragon's Breath $8
Full Metal Planet $10
Sherman M4 $10
Tower Toppler $6
Fire Zone $10
Universal Military Simulator $10
Castle Warrior $6
Battlehawks 1942 $10
Archipelagos $6
The Quest for the Timebird $10
Heroes of the Lance $10
Windwalker $10
Deathbringer $10
Star Trek: The Rebel Universe $10
Road Raider $10
Manhatten Dealers $6

Barbarian/CrazyCars/EnduroRacer/Wizball/Rampage 5-pac $12
Harrier Strike Mission $8
Space Harrier $6
Death Sword (same as barbarian)/Barbarian II $12
Alien Fires $6
Drakkhen $10
Super Huey $7
Rocket Ranger $10
Hero's Quest $10
Global Commander $5
Roadwar 2000/Roadwar Europa $12
Championship Wrestling $5
TechnoCop $10
Star Raiders $6
Dungeon Master $10
Eye of Horus $10
Hostage $8
Shadowgate $10
BattleMaster $10
BattleChess $5
ArticFox $10
Warship $10
Elite $8
Sundog $10
Obliterator $10
ChronoQuest $10
Star Fleet I $10
Flight Simulator II $10
Skyfox $10
Plutos $6
Xevious $6
Hacker/Hacker II $12
Double Dragon $6
Airball $6
Adventure/Eliza/Life/PONG 4 pac $10
Nine Princes in Amber $10
War in Middle Earth $10
Zak and the Alien Mindbenders $10
Leather Goddess of Phobos(w/ scratch&sniff) $10
A Mind forever Voyaging $10
Wishbringer $10
Enchanter $10
Cutthroats $10

Games: (With docs but the box is lost)

Road Raider $10
Menace $6
Batman: The Caped Crusader $6
Barbarian $6
Zany Golf $6

Misc:

Maps & Legends: The Cartographer $15
with Datamap Collections I & II

CAD 3D 1.0 $35
& Cyber Studio (CAD 3D 2.0)
& CAD 3D Plotter & Printer Drivers
& Cartoon Design Disk
& Future Design Disk
& Cyber Paint

ST Sound Digitizer (hardware) $25

Print Master Art Gallery I $5
AEGIS Animator $10

Large box of Documentation $50
(2 Developer kits, a few GEM books, random Atari docs)

Xerox box of Atari magazines w/ disks $35
(All but 3 or 4 Starts, about 10 Compute's Atari ST)

WordWriter ST $4
Thunder (spell checking DA) $5
Flash 1.6 $5
ST Chat $3
ST Talk $3

Mark Williams C ver 3.0.9 w/ manuals and CSD (debugger) $30
MCC Pascal $15
Modula II $6

Quick ST 2.2 $5

or take everything for $1100 shipped.

I personally haven't dealt with Toad since I met the Troy's at an
Atari show several years ago. They had a bin full of 8-bit carts that
were selling for $10 a piece (even though you could find them
elsewhere at the show for a buck or two). Anyway, I found a rare cart
in there and when they saw me looking at it, Mrs. Troy literally
snatched it out of my hands from across the booth and rudely told me
it wasn't supposed to be in the bin! I'd never had someone do this to
me before or since, even with all the hostile people I've dealt with
at flea markets over the years, and I was quite pissed! There could
have been another way to tell me the stupid thing wasn't for
sale...Anyway, I appreciate that they support Atari after all these
years, but get real...they have always charged close to full retail
for EVERYTHING, since the very beginning. How the hell did they
survive this long dealing Atari wares when all the good vendors fell
by the wayside?

Just my 2 cents worth...

Don't trust the markings. You just have to match up the corner cut-off on the
chip with a similar one on the carrier.

Easiest way is to use something like Imagecopy 4.0. If you are after
the details for one of your own programs, check out the book "Graphics
File Formats by David Kay & John Levine (McGraw Hill pub ISBN
0-8306-3059-7) Gifs are covered in Chapter 6 (30 pages.) Transparency
appears to only be supported in 89a Gifs. Wayne Booth

Hi, several atari art program do transparent GIF as well.
Just for an example, Image copy V4 will do it no problem..
Image copy also does interlaced if you want.
:) bye.

In the mid-80's when Atari was using the slogan "Power without the Price"
It was true. You couldn't buy a better system for the money. The problem
is that the prices on Atari hardware became stagnant, while hardware prices in
the PC world dropped rapidly. For instance, in 1992 Atari released the Falcon
'030 (1 meg, no HD) for $799. Today toad is still selling the MK-I falcons
with the same specs for... $799. In 1992, $799 might have bought you a 286
or 386 system with 1meg and a small HD if you were lucky. Now you can buy
a low-end Pentium-class machine with 16meg RAM and a 850meg (or better) HD.

Add-ons are similar. For over $150, you can take your 8mhz ST to 16mhz with
an Adspeed. For about $50 you can replace a 66mhz 486DX2 with a 133Mhz 5x86
CPU on a PC.

I would love to have an Atari clone that was as powerful as my PC (like one of those
Medusas or Hades machines) But at $3500 for what is equivalent to a slower
Pentium at best, I just can't afford it. :(
```

5713. switchable tos question

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bbf66b$74b875c0$4a3bd4cc@Primenet.Primenet.com>
Source record: 130995

Does anyone know if a switchable TOS (2.06/1.4 or 1.2) will work on an STE with a 16 mhz accelerator? If it would,which is the easiest to install? I can't play a lot of my games on this machine,because I have TOS 2.06,but I would like to.

5714. Dave Munsie question

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bbf66d$0addd940$4a3bd4cc@Primenet.Primenet.com>
Source record: 130996

Does anyone know Dave Munsie or know how to get a hold of him? I payed to register Asteroidia a LONG time ago(about a year and a half ago),and it turned out that my registered copy was messed up,it wasn't STE enabled,so I called him 3 times (literally) for help on the phone,and every time (literally) he said he'd call right back and upload me a good copy,but he never did.One time he seemed to have a good reason,but the others who knows.He may have even told me that he would mail me a copy if we had a problem with the transfer,but I can't remember for sure.I was afraid to call a 4th time due to the sheer awkwardness of it all.The only reason I registered it was for the STE features,so I feel 100% cheated.Any (constructive) advice anyone?I don't mean to disrespect him by telling the world this,but I just want some ideas from someone,I can't even seem to get a response from his e-mail address.Thanks-Satcom2

>that business which is why their emulator also does not support running
>binary images of TOS.
>
>- Darek"

That's funny. I spoke with him at Toadfest this past October and he
told me that you can use a TOS image with Gemulator, that it was possible
for awhile now. And best of all, he said that he really doesn't care what
people do with TOSes since he just sells emulators, not TOS.

I personally have successfully used a tos.img with the Gemulator Demo.

>point. I would gladly pay the $US69.95 for Gemulator 96 instead of using

Message-ID: <19961230180100.NAA13735@ladder01.news.aol.com>
Source record: 131000

I know you all are trying to be helpful, but...

Darek has said that he will NOT accept a copy of my receipt as proof of ownership, a registration card is the only type of proof he will accept, which is mightily convenient considering registration cards are no longer included with Gemulator 96, at least when you buy from his authorized dealer Toad Computers.

So far, I have aimed most of my criticism at Toad, but that is because I paid the money to Toad. In any event, I have been shocked at the attitude so many of the remaining Atari dealers display. If they dislike their own customers this much, why don't they go in another line of business?

The fact is, I paid what they asked for, if they wanted more money they should have asked for more, heaven knows Toad is not ashamed to ask for money. I held up my end of the bargain and I'm not a thief, cheap, or a complainer to ask that they hold up their end of the bargain.

I would like to know if anyone has gotten sound to work with Gemulator 96? If so please tell me about your system configuration...

I use gemulator a lot, despite its limitations and am glad to own it, what I am not happy about is being cheated. If there wasn't going to be any support, I would've like to have known that before purchasing the product.

OK, The intro to the new C tutorial is in the newsgroup comp.sys.atari.programmer...

Make it your new years resolution to learn C. Classes begin on January 1st, so sharpen your pencils now!

If you don't have a compiler, or don't know what a compiler is, then be sure to read the Introduction (again, that has been posted to comp.sys.atari.programmer)... it explains what a compiler is and how to get one. You will need one.

Dave has released ALL his previous Licenceware titles now as Freeware,
Drop me note with your details and I'll send you on a copy of STE
Asteroidia. One off offer only, any body else will have to get it thru
normal channels :)

OK, I've posted Lesson 1 a couple of days early...so go check it out in comp.atari.sys.programmer

I am going to start from the very beginning and move on from there, lesson 1 is about getting to know your compiler and explains how to compile a program using Laser C.

In addition, there is an extra about adding comments to C code

>

Thanks for the information.
I got the demo version of HDDRIVER, but could not install it on my hard
disk. I kept getting messages that the driver could not be written because
my hard disk was write protected. I also got a copy of BIGDOS.

The following combination allowed me to read the IBM formatted 100Mb ZIP
Disk.
- Boot using ICD Hard Disk Driver V6.5.5
- run HDDRIVER

- run BIGDOS

I got a few bombs on the way but hey I could read the ZIP Disk and so I was happy :)

I am curious why I couldnot install the HDDRIVER demo though ?:|
Any thoughts ?

Happy New Year to All

Does anyone know, how the 11 sectors format as used by copystar or
fastcopy works exactly?
What do I need to know to read them on a PC?

Please respond via email. Thanx in advance.

```
================================================================================
SILIconvention'97 - Germany//Bremen - http://www.siliconvention.com
OFFICIAL INFO TEXTFILE v2.0
================================================================================

The Organizers of the FRIED BITS I-III, BB SYMPOSIUM'96, YELLING JAM PARTY
and INTERCON'96 Party bring you the biggest computerparty at easter 1997.

All Systems are welcome! That means we have lots of Competitions for the
following computers: ACORN, AMIGA, ATARI, C64, PC.

Who?
--------------------------------------------------------------------------

The Organizers are: absence. (Atari + PC)
ADM (Atari)
Blank (PC)
Fairlight (C64)
Icebird (Acorn)
Inter (Atari)
Oxyron (Amiga + C64)
Plush (C64)
Talent (C64)
TSCC (Atari)

Where?
--------------------------------------------------------------------------

Gemeinschaftszentrum Obervieland
Alfred-Faust-Str.4
28277 Bremen // Germany

Check out the best partyplace you've ever been. What about a big building
complex with showers, kitchens, lots of party halls and rooms and a nice
presentation hall with the greatest video beam and brainblasting sound
equipment!

Yeah! On the SILIconvention'97 is place for about 2.000 people including
their equipment plus seperate sleeping rooms!

There is a seperate disco-room on the partyplace. There will be a great
RAVE-Act and SID-Act during the SILIconvention'97! Entrance for party
guests is free. Have a nice Rave?!

When?
--------------------------------------------------------------------------
```

...during easter 1997...

Begin: 28.03.1997 12:00 CET
End: 31.03.1997 12:00 CET

What do you need?

All you need is a computer, a warm sleeping bag, multi power sockets(!)
and 30 DM entry. If you wanna save money, then reserve your coming until
march 20th 1997:

transfer 20 DM (for each person) to:

Bank: SPARKASSE Bremen (Germany)
Account number: 1247 0308
Bank code number: 290 501 01

DONT FORGET TO STATE YOUR FULL NAME ON THE TRANSFER FORM!!!

IF you have problems or questions dial this number:
+0049-421-8498236. From 19:00 to 23:00 (CET).

What can you expect?

-Room for 2000 people
-Quiet, seperate halls for sleeping
-Extremely powerful PA equipment and competitions with two videobeamers
-10 hours RAVE in our seperate disco (entry free for party visitors)
-C64-Tune disco
-Internet terminals
-Pizza-Service (in the evening)
-We will offer fair prices for food and drinks. You can also bring your
own food to the party.
-Party T-Shirt's. The best T-Shirt printing techniques you've ever seen.
The Shirts will be shining in darkness!

How to reach the SILIconvention'97?!
---

by car: Drive to Bremen over the highway and exit at
"Bremen - Brinkum". Then follow the signs that will show
you the way to SILIconvention'97 Party. If you are in
trouble by finding the partyplace, just call this number:
8498329.

by train: Get out at "Bremen Hbf" (main station) and take the tram
number 1 way "Arsten" and get out at "Kattenturm - MITTE"
and follow the signs... If you are arrived after 23:15
then call this number: 8498329.

by plane: When you have reached the Airport Bremen call this
number: 8498329. Please give us the number of people who
arrived - thanx!

Competitions and Rules?

The main attraction will be the competitions. Anybody may perform
graphics, musics or programming. The entries will be shown on two
videobeamers in a big presentation hall. The best ones will be prized.

ACORN Demo Competition:
-configurations: RiscPC SA200, 16MB, 2MB VRAM, 8Bit Sound, Risc OS 3.7
Archimedes 4000, ARM 250, 4 MB RAM, Risc OS 3.11
-changes of monitor freqences are not allowed
-all resolutions used in the demo must be given in an extra informa-
tion file. (monitor-mode file, or handwritten)
-an own musik module has to be included
-no interaction
-demo has to start with a simple double-click and must leave to the
desktop without any system crash
-maximum size of the demo: 8 MB
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

AMIGA Demo Competition:
-configuration: Amiga 1200 Blizzard CPU 1230, 50 Mhz, 8 MB Fast
-maximum size of the demo: 8 MB
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

ATARI Falcon Demo Competition:
-configuration: standard ATARI Falcon030, 4 MB RAM, RGB
-maximum size of the demo: 8 MB
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

C64 Demo Competition:
-configuration: standard C64 I or II with Action Replay V
-maximum size of the demo: 2 disksides (1541)
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

PC Demo Competition:
-configuration: Pentium 133, 16 MB RAM, GUS or SB Pro
-(minumum configuration 486 DX 4/100, 8 MB RAM, GUS or SB Pro)
-maximum size of the demo: 8 MB
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

ACORN 64Ktro Competition:
-configurations: RiscPC SA200, 16MB, 2MB VRAM, 8Bit Sound, Risc OS 3.7
Archimedes 4000, ARM 250, 4 MB RAM, Risc OS 3.11
-changes of monitor freqences are not allowed
-all resolutions used in the demo must be given in an extra informa-
tion file. (monitor-mode file, or handwritten)
-an own musik module has to be included

-no interaction
-demo has to start with a simple double-click and must leave to the
desktop without any system crash
-one file max. 64k = 65536 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

AMIGA 40Ktro Competition:
-configuration: Amiga 1200 Blizzard CPU 1230, 50 Mhz, 8 MB Fast
-one file max. 40k = 40960 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

ATARI Falcon 96Ktro Competition:
-configuration: standard ATARI Falcon030, 4 MB RAM, RGB
-one file max. 96k = 98304 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

PC 64Ktro Competition:
-configuration: Pentium 133, 16 MB RAM, GUS or SB Pro
-(minumum configuration 486 DX 4/100, 8 MB RAM, GUS or SB Pro)
-one file max. 64k = 65536 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

Coding Competition:
-code the best effect in 4 Kb
-all systems allowed
-maximum filesize = 4096 bytes
-playing time: max. 5 minutes
-deadline: sunday, 03-30-1997, 08:00

Graphics Competition:
-picture should be pixeled completly. Retouching is allowed
-800x600 pixel max.
-max. 24 Bit
-use general filetypes
-deadline: saturday, 03-29-1997, 09:00

Render Competition:
-picture should be rendered completly. Retouching is allowed
-800x600 pixel max.
-max. 24 Bit
-use general filetypes
-deadline: saturday, 03-29-1997, 09:00

C64 Graphics Competition:
-picture should be pixeled completly
-picture must be executable
-scrolling is not allowed
-no music

-deadline: saturday, 03-29-1997, 09:00

4 Channel Protracker Competition:
-player: Protracker V2.3 (Amiga)
-maximum filesize 1.44 MB
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

Multichannel Music Competition:
-player: Cubic Player (PC)
-maximum filesize 1.44 MB
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

C64 Music Competition:
-choose between new SID and old SID
-music must be executable
-graphics and other effects will not be shown
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

Wild Competition:
-description: anything that does not fit into the other categories.
theme: all about computers.
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 11:00

Fake Demo Competition:
-description: do the worst demo
-all systems
-maximum size of the demos: 2 MB
-playing time: max. 5 minutes
-deadline: saturday, 03-29-1997, 11:00

Netwave-Internet Game Competition:
-description: code an internet game
-has to work on Netscape or Microsoft-browser
-Netwave reserves the rights of every entry
-prize: a state of the art PC-system
-deadline: sunday, 03-30-1997, 11:00

Surprise Competition:
-desciption: surprise, surprise!
-rules will be announced on the party
-deadline: sunday, 03-30-1997, 11:00

General Rules
-no pornographic or racism contents
-we may shorten the playing time
-we reserve the rights of publishing all entries (CD-Rom)

Many competitions - lots of prices. Our sponsors will spend lots of
prices and money to this party. Be sure!

Please note this:

- smoking is allowed. In some rooms, smoking is absolutly forbidden
(sleeping rooms a.e.)

- alcohol is allowed. If somebody makes trouble he will be kicked out.

- please don't park your car at the entrance door or emergency escape.

5726. *** Mega Blowout Sale! ***

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <x9M0kk+.johnhechtman@delphi.com>
Source record: 131008

***** MEGA BLOWOUT SALE! ****
.
I finally got all the kinks out of my Turbo Falcon (14 meg/Wizztronics case/Falcon Speed/620 meg HD/CD-ROM/floptical). So that means my trisexual (Atari/Mac/DOS) Mega 4 and all non-Falcon compatible programs MUST GO!
.
I could probably make more money selling things off individually, but frankly I don't have the time. So I'm going to try to sell the whole system as a package - and what a package! Here's what you get:
.
1 - Mega 4 ST with high-density drive fitted (working as a double density drive, ATM). The Mega also has been fitted with a Tos Extender Card (Codehead) that has TOS 2.06. Plus, I'll throw in the hi-density drive kit from Computer Direct, so with a bit of work, you can use hi-d disks.
1 - ICD Link 1 with all software. This unit has functioned flawlessly for years - gives you the ability to chain up to 7 SCSI devices. I had a CD-ROM and a floptical drive on my chain along with the hard drive. Of course, I was using Extendos for the floptical, but the ICD software also has CD-ROM drivers.
1 - Maxtor 120 meg SCSI hard drive with case and power supply. It's in perfect shape with NO bad sectors. As a special bonus, this drive is LOADED with software, some commercial stuff that comes with the system and a ton of shareware. Plus, the drive comes PRE-CONFIGURED for the two emulators listed below.
1 - AT-Speed 286 emulator with math co-processor. This fits in a socket I soldered atop the 68000 chip. It permitted me to run Quicken and Quattro Pro, as well as learn a lot about DOS and system setups. Comes with full docs and DR DOS 5.0. Plus a nice assortment of DOS shareware.
1 - Spectre cartridge, with full software and manual. The Mega becomes a Mac Plus on steroids with this unit. I could even log on to Delphi in Mac mode! Comes with all the software you need to get started and a few Mac commercial programs (no docs). Will not run System 7.X.
1 - Migraph B&W hand scanner with Touch Up/OCR Jr. software and manuals. Nice unit, but not Falcon compatible, so out it goes!
1 - SM-124 hi-rez mono monitor
1 - Bag of replacement capacitors for the monitor. When the monitor died on me, I not only replaced the bad capacitor, I also put together a kit of all the electrolytics in the unit - just never got around to swapping them out.
1 - Multi-sync switcher box. I used this to change video modes with my NEC-3D multi-sync monitor.
1 - 2400 baud Supra modem. Not very fast by today's standards, but a good starter modem and very reliable.
1 - Mega 4 Field Service Manual. Very rare, gives full schematics, parts

lists and logic charts. Very useful for trouble shooting.
1 - Copy of Warp 9 screen accelerator (non-Falcon version) with manual.
1 - Version of Master Cad - an early CAD program with manual.
1 - Collection of 50+ cover disks from Atari magazines.
5 - Dead Atari mice, suitable for parts.
1 - Dead Megafile 20 HD, suitable for parts.
.
I'll bet you're wondering how much all this will cost, right? Let's
look at what the going market price would be for each unit and then I'll
make you an offer that I hope you can't refuse!
.
1 - Mega 4 ST.....$175.00
1 - TEC card (TOS 2.06).....$40.00
1 - Hi-density floppy kit.....$40.00
1 - ICD Link 1.....$50.00
1 - Maxtor 120 meg hard drive.....$125.00
1 - AT-Speed 286 emulator.....$75.00
1 - Math co-proc chip (287).....$30.00
1 - Spectre cartridge.....$60.00
1 - Migraph B&W hand scanner.....$50.00
1 - SM-124 hi-rez mono monitor.....$60.00
1 - Bag of replacement capacitors.....$10.00
1 - Multi-sync switcher box.....$30.00
1 - 2400 baud Supra modem.....$10.00
1 - Mega 4 Field Service Manual.....$40.00
1 - Copy of Warp 9.....$10.00
1 - Version of Master Cad.....$5.00
1 - Collection of 50+ cover disks.....$5.00
5 - Dead Atari mice.....$5.00
1 - Dead Megafile 20.....$5.00
======
$785.00
.
I don't even want to think what the original cost of all this stuff was.
Times change, and what was gold yesterday is lead today, BUT I'll make you
an offer you (hopefully) can't refuse! Buy ALL this STuff, and I'll give
this to you at a PACKAGE PRICE OF ONLY $500! You pay shipping - at this
price, I can't afford to! ^^^^^^^^^^
.
Please note that these are real market prices, not some inflated idea of
what the STuff is (was) worth. I know I could get more selling single items
but I just don't have the time! If interested, send email to me at:
johnhechtman@delphi.com - or call my service 212-459-4323 and leave me a
number and the best times to call you. I'll ship COD or pre-paid by money
order or certified check on the carrier of your choice.

5727. Holy 16 bits! The Atari _is_ alive

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: Moose <moose@mitt.demon.co.uk>
Message-ID: <01bbf6a0$2fa58ec0$fb53989e@mitt.demon.co.uk>
Source record: 131009

This Christmas break has given me the opportunity to restore my various bit and bobs from The History Of Computing to working order. My trusty Atari 520 STFM (upgraded to a whopping 1 meg several years ago at the cost of 80 quid - a smidge less than I just spent getting an extra 16 meg for my PC...) has now been revived after the disastrous attempt to upgrade it to TOS v2 which resulted in its apparent death, and my move to the world of the satanic Wintel alliance, is now back on its feet.
Now, most of my Aladdin's technocave of machines are ethernetted up and merrily talking TCP/IP to each other like natives. I'm prepared to let the ZX Spectrum, the Commodore 64 and the Apple II gather dust away from this sea of information, but I want to see my lovely Atari back up in the mainstream. At the moment, my reasoning is based purely on nostalgia - I had some very happy times with this thing. Going through the old collection of floppies (700-odd K! Jesus, I'm lucky to get a program
that fits into 70 meg these days. Etc etc nostalgia etc) I came across all my old 68000 assembly programs, and was struck by a warm sense of lurrrrve for this machine.
The thing is, I'm not prepared to put up with swapping floppy disks about. What I'm looking for is a system that'll allow me to boot from a single floppy,
and from then on use a mounted hard disk from either the Sparc Station or a PC to drive the ST.
So far I have found two flawed possibilities; there's something called ghostlink which allows me to mount PC hard drives over a null modem cable - this falls down because I can't run programs from the mounted drive, and because the PC-based server doesn't run under Windows 95, so I have to tie up an entire PC simply to provide file services to a machine of considerably
less power. The other possibility is this thing called 'Mint', which looked very tasty, but seems to require a hard disk on the ST - the very thing I've
been trying to work around.

Basically, what I'm trying to do here is set up a diskless workstation using
the ST, for no better reason than that it strikes me as cool. The Atari certainly
appeals to me on a number of levels (the mono monitor is one of the crispest
displays I've used), and I'd like help turning it into a useful workhorse.

If anyone has succeeded in setting up an ST to use shared hard disks (NFS or
SMB), I'd like to hear about it. Furthermore, if there are any killer apps

which
necessitate the use of an ST, that'll help me justify using this thing at
all...
It has a video digitizer attached to it, so if there's any video
conferencing
software for this machine, that would be cool.

Cheers,

Moose.

-- Please don't reply via email - what with one thing and another, my email
is currently trashed. The Sparc is bouncing anything it receives, and
I haven't yet had the time to reason with it.

5728. Falcon serial ports?

Newsgroup: comp.sys.atari.st
Date: 1996-12-30 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <BLJ0sBI.greg_evans@delphi.com>
Source record: 131010

I read somewhere that a second serial port can be added to a Falcon because the logic was already on the motherboard. Any truth to this, and if yes, how can it be done? I would love to add a serial port device like the Tabby.

You could possibly connect the 1040 to your PC and use the PCs hard drives, but there are some restrictions on partition size unless (or even if) you use HD Driver on the Atari side.

Hi there.

I've had the misfortune of reading several of Dereks posts online and
meeting him once at a an Atari show almost 2 years ago. I can state that
I would NEVER buy anything from that person under any circumstances.

Besides, emulators, espesicially Derek's specialty, software emulators
have never worked properly on any CISC processor. The best ST emulator is
to have a REAL ST!

Hi! I plan to bring my Atari Falcon 030 with me when I move on campus next semester, and I'd like to use the ISDN lines they have installed in the dorms. I'm not sure, however, how or even if my Falcon can use it. Of course a regular Ethernet card won't work, but I've never heard of an Ethernet card for a Falcon. My questions are, can it be done, and if so how?

Thanks in advance for any help,
George Garner

Hi Spencer, on 29 Dec 96 you wrote to *taf@io.org*: ...respect, brethren

SD> I never did manage to get a good reliable download using Modem 2 as I
SD> believe it uses the standard MFP 68901 chip as used in the ST where as
SD> Serial 2 uses the Zilog SCC chip which is similar in spec to the 16550
SD> UART which PC's tend to use (actually better than it).

Not true. The MFP is connected externally through Modem 1 and Serial 1 on
the TT (respectively Serial Port 1 and 2 of the chip itself, which is where
the confusion probably is). The SCC is connected externally through Modem 2
(Serial Port B of the chip) and either Serial 2 (if SCC Serial Port A of the
SCC is in RS232 mode) or the LAN port (if Serial Port A of the SCC is in LAN
mode).

SD> I would therefore suggest using Serial2 in conjunction with HSModem
SD> for your modem connections on your TT.

It seems a matter of personal preference, going by the comments we've seen in
the past, but for people like you and I with VME cards the decision is made
for us ISTM.

Source record: 130925

Hi Gary, on 30 Dec 96 you wrote: ...respect, brethren

>>>> So how come that these can run stable on the Falcon, but not MagiC?
>>>> Yeah, blame the hardware, not the software. The hardware only does
>>>> what you tell it and others manage to do it right. I guess it's pure
>>>> luck then.
g>>> That's right! Blaming Atari for their board design seems a very shaky
g>>> answer to me! If Geneva etc. can work with these 'doomed' machines
g>>> then so could Magic, with a bit of effort!!

I'm not sure they're trying to achieve the same thing in every department, are they? (I don't have Geneva so I couldn't say for sure).

g>>> I for one, am extremely annoyed at Andreas' arrogant attitude of
g>>> 'it's your fault for having a 'unstable' Falcon'. Yeah right! Nobody
g>>> mentioned 'Falcon compatible (if you're extremely lucky)' when I
g>>> spent all that money on it! So am I likely to get a refund? I
g>>> blooming well doubt it!!

A refund from who? The Falcon's inherently flaky - that's the whole reason why I wouldn't have one at any price to be quite frank. That's not to say I think Magic's not also inherently flaky, but I think the ST range is quite consistent in its build quality and its faults can be considered part of the specification of the machine and should be worked around. I'm not sure the same can be said of a Falcon.

>> While I've already expressed my doubts about Magic before now
>> (remember, I still refuse to boot without it so I'm not *that* unhappy
>> with it) I'd also say that it's no good saying that the Falcon hardware
>> is without many faults. We all know that Atari fixed the minimum they
>> could get away with after the first abortive models hit the shelves.
>> ISTM that all the posts we see only confirms that the Falcon is pretty
>> shaky at the best of times with many machines exhibiting individual
>> problems thatput a whole question mark about its build quality.
g>
g> I use Magic a lot too! I'm not saying that it's crap and unuseable. But
g> it does have problems that Andreas refuses to acknowledge!

Yes, I agree with this. However (correct me if I'm wrong) Andreas has written MagxDesk, not Magic itself - isn't that right? At least he's prpeared to discuss it publicly, which deserves some credit, whereas 2B who are the main culprits ISTM are nowhere to be seen. The only responses I've heard from them are in the form of "we're right, everyone else is wrong, so there" which is even less encouraging than what we've already heard...

g> I'm also not saying that Falcon hardware has no faults. But my Falcon
g> is a TOS4.04 based one. Certainly not one of the 'first abortive
g> models'!!

I'd still put it in that category tbh.

g> The fact that MagiC has problems with some Falcons should:
g>
g> a)be mentioned when purchasing MagiC and a refund offered
g>
g> b)Andreas et al should make some effort to sort it out!! After all, we
g> are not talking shareware here, we are talking a commercial product
g> that people pay a lot of money for! And the support is dreadful!

On the basis that Andreas is here, I'm sure he's listening. Now, if 2B were listening too instead of just giving us the cast-off's from the work they do on other platforms I'd say we'd be getting somewhere.

g> I'm sure MagiC must have quite a few bugs in it, but you never see a
g> new version or any patches. Is there actually any ongoing
g> development/improvement?

On other platforms, yes. This shouldn't be a surprise though - I've never thought that much of NVDI support either and that comes from the same stable. Look at the quality of the NVDI manuals and english-language support.

>> We've all done some hacking to our machines one way or another so it's
>> hardly surprising when the components fail to gel together on a regular
>> basis even with perfect software. I mean, how many times have you
>> heard about programs performing completely differently on identical
>> hardware (re: CAB/STiK for example)?
g>
g> Oh dear. The fact is that Ataris are a hobbyist machine. And as a
g> hobbyist machine there are numerous 'hacks' and bolt-ons that can be
g> done to improve it. I for one am still waiting for my Nemesis board. I
g> don't think the attitude of 'ah well, it's my fault for improving my
g> machine' is a healthy one.

I'm not saying that at all. I'm saying that the base machine is inconsistent and that any variation to an already inconsistent product could bring any sort of result imaginable. It's not the 'fault' of anyone - it's just a natural and obvious consequence of inadequate standards.

g> Using the STiK/CAB analogy, at least the authors are trying to make it
g> compatible with all machines (and I know it's not easy). The big point
g> is that Andreas gives the impression that he couldn't give a stuff!!

I don't think the solution is entirely up to him. If he can influence the other people involved we may get some results.

I certainly know one person who's had it fitted for a few weeks - I thought
it was available right now. Give Dave a ring on 0121 693 6669.

j> parameters section of hdutilities it shows the existance of the connor
j> ide drive but I can't seem to get to boot it in any way I can think of.
j> Does anybody have any ideas?

It sounds very much like you've got hddriver.sys but with C:\ being on SCSI 0
it's trying to continue from there, so when the Syquest is not connected
there's nothing to boot from.

Reassign the Syquest to SCSI 0 and boot up normally, run HDDRUTIL and check
in the device configuration that you've got the IDE0 and SCSI 1 selected as
well as SCSI0 and re-order them so that they boot in the right order. Note
that if you then change the SCSI ID of the Syquest to ID1 then HDDriver is
isn't going to find it.

I'd change the boot to take place from the IDE drive with both SCSI 0 and 1
accessible, reboot and do all the copies from the Syquest to the Jaz that you
want to do and then when everything's done reinstall Hddriver again to the
Jaz this time.

Something like that anyway <g>. HTH.

I can't speak for Toad, but if my company treated you like this ... I would sure as heck want to know about it. Call the 800 number and ask for the owner of the company and do not take "he's not in" for an answer. Tell them that you will hold.

In all fairness to our competitor, I am sure David would want to know about this and bring some kind of closure to the issue.

As far as Darek goes, what would you expect from a guy who openly calls "all Atari owners idiots and all Atari developers idiots and all Atari dealers idiots" and then these people prove it by buying into his product.

We wouldn't give Mr. MS an inch of our shelf space, even if he paid for it.

Sorry Darek, nothing personal.

All the best,

5743. XaAES and Nova VME ET4000?

Newsgroup: comp.sys.atari.st
Date: 1996-12-31 00:00:00 UTC
From: bochmann@kandel.ds.freinet.de
Message-ID: <5aaj5p$hfr@belchen.freinet.de>
Source record: 130931

Hi,

I tried running MiNT and XaAES with my Nova graphics card on the TT...
It seems to work somewhat, but I wasn't able do launch any program from
XaAES (may be pure stupidity, though - didn't do anything with MiNT for a
long time). When shutting down XaAES, the MiNT console was gone (well, the
console was obviously there, but the disply wasn't).

Does anyone happen to know: XaAES asks the VDI workstation handle of the
display to be passed as commandline parameter; but as I bought the Nova card
second hand, I don't have any docs to it, and no idea where to get them. I
tried to use 9 as handle (TT rez with 256 colours), which produced the above
results...

Also, the NovaVDI I have is quite old (V2.50) - does anyone know what the
latest version is, and where to get it?

Thanks for your help,

/\|ex.

Real Soon Now, I hope. <G>

For what it's worth: Issue #1 and #2 are now sold out (at least the quantity I ordered for the US is). If there's enough demand (e.g., I'd need about 10 more requests to offset the cost of the International draft and postage), and if there are any back numbers available (Mike hasn't had time to answer that query yet), I may look into getting some, but the situation at present is - new subscribers from today will start with Issue #3 in the USA.

I've have aquired several TOS machines the last few years,
some left in the "as is" configuration, and others upgraded
with many (expensive) options. I can comment on the
performance of the 1040ST, MegaST, MegaSTE, TT030 and Falcon
in both standard and modified configurations.

First, I would like to say that any statement concerning the
Falcon being "flaky" is nonsence. I have had only TOS 4.04

machines, three of them, but according to the prints I have
there were no major changes throughout production revisions,
and TOS 4.XX is upgraded to 4.04 easier than an ST to TOS 2.06.
The only other questionable area is the method that is used to
tie the system clocks together for a more stable operation of
the chipsets. Unfortunately, this requires soldering, and more
importantly the machine needing to be placed on an O'scope to
properly install the modification.
A new C-Lab Falcon Mark X will perform exactly the same as a
Rev H Falcon purchased in 1993, provided the necessary clock
patch is installed. The audio modifications are dependent on
the external hardware that one wishes to utilize. I did however
omit that the C-Lab's are PAL based motherboards which do not
support NTSC standard, but again this only effects external
hardware. The Falcon does have a few bastard chipsets that have
given third party hardware developers fits, one set being the
GAL's that control such things as the 68000 bus and DSP operations.
This is one of the reasons that all of the "speeders" built for
the Falcon have so many fly wires. But for the "standard" Falcon
user, this is not a problem. The other is the memory management
(or lack of:) that the Falcon uses. Of all the accelerators
that are out on the market for this machine, only the Mighty
Sonic and the Afterburner properly handle memory management.
The aproach was simple. Disable the 68000 bus on the Falcon
and add the necessary hardware to provide their own MMU and
make the device the bus master. They both work well.
Accelerators that use "software" patches have failed to expand
the Falcons memory limit beyond 14mb. The other draw back to
using the existing hardware when accelerating the machine is
the chipsets are driven way over spec. Every engine has it's
redline, and so it is for each individual Falcon. When
driven beyond specification, each will perform differently
than another identical unit. This is not due to differences
in manufacturing between machines, but how far a specific chip
can be pushed beyond it's limits. The Nemesis is the first
of the "speeders" that takes this into consideration, allowing
the CPU to be run at a modest 24mhz, along with the bus.
As far as workmanship goes a quick visual compairson of an
STE motherboard and a Falcon board will tell you, at least
at one point in time, Atari ment business with this machine.

There were a few changes with the Falcon that did effect the ST\E
compatibility that Atari advertised it to have. I'm no programmer,
but I think it had to do with the BCONMAP no being set properly.
There was another patch that the CodeHeads wrote too, providing
backward compatibility for a few applications. I don't use
BCONMAP as I have HSMODEM installed as (should) probably all
TOS users. I have no other "fixes" in the auto folder, only
applications.

I hate to use the term " clean written GEM applications", but if
you go back when game programmers depended on the cpu clock for
timing, you can surely see where that is going to be a problem on
the Falcon. Some address that exist on an ST\E are different or
simply don't exist on the Falcon. Small changes in the machines
architecture make many older applications (and programmers:)
incompatible with this machine.
NVDI, SpeedoGDOS, HD Driver, HUSHI and ICDBOOT are a few
examples of applications that perform just as well on a
1040ST with TOS 1.02 as they do on a Falcon with TOS 4.04.
I can run Phoenix (Zenomorph), Prism Paint, Calamus, Trueimage,
PageStream, M.A.G.E., Papyrus, Atari Works, Planetarium,
STalker, Diamond Edge, AB Zoo, DA's Vector and STraight Fax
and many more without any problems on any of the TOS machines
I own, and they are especially nice when run on the Falcon.
Surely, somewhere in that group is the code for a game that
will run on all machines, including the Falcon:).
Take a long look at the dated Degas Elite. It refuses to
die. It even runs under MagiC Mac on my Quadra. Granted
compaired to "todays" app's, it's not the most modern
interface, but being able to run on ANY Atari compatible
machine says a lot for the coding that went into the program.
In fact, most of Hudson's applications work fine on the
Falcon. I think the worst compatibility problem is that
CAD 3D needs to be run from monochrome mode on the Falcon
to work right. It too runs under MagiC Mac in mono mode.
One of my Falcons has 32mb of fast ram. Real honest to God
fast ram. System total is over 46mb. I can only think of
one application that won't run from fast ram on this machine.
Rainbow Multimedia II (which never-the-less is a must own for
Falcon users). I don't see any compatibility problems or
flakeyness here, but you would have to own one to know:).

As far as the problems users are having with CAB and CAB.ovl,
from the above comparison, I would have to think that
the problem is either with each individuals internet provider,
software conflicts (unlikely with my setup anyway) or
how the transport layer is being implimented on the TOS
machines. Other problems I know exist are the constantaly
changing standards that "brandname" software houses use to
keep their package at the industry forefront. NetScape on
this Mac crashes just as much as CAB on my Falcon does. STick,
Newsie, MGFTP and Antmail work flawless on my machines,
including both remaining Falcons. Modified or not.
For Beta software, that's pretty damn good.

MagiC 5.0? Who knows. I ran 4.0 for a while, but with more
than two machines running at once, I found it an unecessary
luxury. 5.0 is setting on my desk and maybe i'll try it out.
I already know it won't run from fast ram from past experience
so it will be slower than TOS 4.04 running from fast ram.
Maybe when it gets out of the Beta stage, more people will

be happy with its performance:). But, not to take anything
away from the O/S, it performs very well on the Mac. V6.0?

ST's are nice. Falcons are technologically superior.
Just try Rainbow Multimedia, Neon Grafx, Apex Media,
Falcon Speed, Expose', MPEGDSP and Cubase Audio 16 and you
will see why Falcon owners love their machines.

Most of Dorothy's programs were designed to be run from floppy which
allowed each kid in a class room to have their own disk. You may not be
able to run them off your hard drive.

Good luck,

Anna and Pat

OK, The lessons are coming fast and furious now, I have had too much time off for the holidays, I guess. Anyway lesson 2 gives an overview of a simple C program.

Check it out in comp.sys.atari.programmer and have a happy new year!

p.s. If anyone needs a repost, just let me know.

5755. Atari Works Printer Drivers

Newsgroup: comp.sys.atari.st
Date: 1996-12-31 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <852137318_OASIS_@parrett.fast.co.za>
Source record: 130943

When I bought my Falcon it came with Atari Works already installed on the hard drive. I haven't used the programme much but just recently started to use it for the occasional letter requiring vector fonts. I find that there seems to be no way to install a different printer driver to that supplied. In fact the driver that came with the prg. seems to be inside the programme file and not as a seperate printer.sys file. The manual is silent on the issue.
Can anyone advise ?.

I know not the people of which you speak, but as a business man myself,
I would suggest that the answer to your query lies in the question.

They charge what the market will bear, and in so doing maintain the
viability of their endeavour. Or to turn it the other way round, the
ones you like because they charge less disappear because in keeping
you happy they are themselves unviable in the long term.

5758. UniTerm on 33.6

Newsgroup: comp.sys.atari.st
Date: 1996-12-31 00:00:00 UTC
From: msk@final.dystopia.fi
Message-ID: <5ablet$lf4@news.clinet.fi>
Source record: 130946

I'd like to know if it is possible to use UniTerm with a 33.6bps modem on a Falcon... in other words, is there a program that enables port speeds past 19.200bps to be used in terminal software that would normally not support those speeds? I know there are other terminal programs like Connect and STalker that support higher speeds, but Connect seemed slow to me and STalker doesn't seem to be able to handle VT100 properly (cursor backwards, loses characters sometimes)

Please reply in private e-mail to the address below, as I rarely read news.

Thank you in advance.

Message-ID: <25573_DCroker@mettav.demon.co.uk>
Source record: 130947

This message from richardw@dmapub.dma.org to All came in on a wing and a prayer...

Hi Richard!

r> I have a SLM804 lazer printer, SCSI hard drive and CD rom drive, and

r> It used to work perfectly fine...now it won't boot off the hard drive.
r> The only thing done recently was done was to make sure it had a toner

Sounds to me like the SLMC804 interface isn't being powered. Check that it has a power light on when you power the printer up. Also try the drive with the controller's DMA lead unplugged (switch off first).

Another thing to check is that you have the computer-drive's DMA cable plugged to the drive's IN port with the laser connected to the OUT port...I've got this wrong in the past and puzzled over it...

r> and drum in it and that was it. Do I have to have my printer at a
r> certain dip switching? If so...what would it look like? Please

It's unlikely that you need to change this, the DIP switch is inside the controller and is usually set to SCSI ID 7.

Speak to 'ya later!

Try contacting Nima at www.magmacom.com/~nima/ and see if any of the drivers Homa Systems sells is compatible. The likelyhood is slim, I'm afraid as each scanner seems to live in a world of its own, but you never know.

Atariworks uses Speedo GDOS for printing so you need to get hold of the correct Speedo driver. They are all PD so anyone who has the driver you need should be able to give it to you. Note Speedo itself is _NOT_ PD but the printer drivers are.

What printer are you using?

Greg

> would like to.

Hi Sven,
I'd have thought that TOS2.06 would have run better on 16MHz than
eight, after all it started life in the MegaSTE. If anyone has an ICD
Adspeed 16e or a T16e they want to sell me then I'll nail it to ny
machine and find out.

Just a thought,
chrisc

Just plugging in a PC mouse onto an ST--no.

Once upon a time I rewired an old Logitech bus mouse to work
with my ATari ST. The hardest part of the whole project was
finding docementation of the pin assigmnents of the
Logitech.

Somewhere I have seen software that claims to allow you to
use a PC's serial mouse with the ST's serial port.
